Sarcoma - greeting.teezi.vn For tumors of the thigh, amputation often consists of a hip disarticulation. The standard hip disarticulation described by Boyd in 1947 involves a posterior flap pedicled gluteus maximus closure. 3 This flap depends on an intact internal iliac artery, which branches into the superior and inferior gluteal arteries supplying the gluteus maximus. 4,5 However, this technique is unfavorable in cases where the gluteal musculature is compromised.
