Understanding the Behavioral Healthcare Crisis is a necessary book, edited and contributed to by a great variety of authors from academia, government, and industry. The book takes a bold look at what reforms are needed in healthcare and provides specific recommendations. Some of the serious concerns about the

healthcare system that Cummings, O'Donohue, and their contributors address include access problems, safety problems, costs problems, the uninsured, and problems with efficacy. When students, practitioners, researchers, and policy makers finish reading this book they will have not just a greater idea of what problems still exist in healthcare, but, more importantly, a clearer idea of how to tackle them and provide much-needed reform.

Dermatology, edited by world authorities

Jean L. Bolognia, MD, Joseph L. Jorizzo, MD, and Julie V. Schaffer, MD, is an all-encompassing medical reference book that puts the latest practices in dermatologic diagnosis and treatment at your fingertips. It delivers more comprehensive coverage of basic science, clinical practice, pediatric dermatology, and dermatologic surgery than you'll find in any other source. Whether you're a resident or an experienced practitioner, you'll have the in-depth, expert, up-to-the-minute answers you need to overcome any challenge you face in practice. Find answers fast with a highly user-friendly,

"easy-in-easy-out" format and a wealth of tables and algorithms for instant visual comprehension. Get full exposure to core knowledge with coverage of dermatology's entire spectrum of subspecialties. See just the essential information with "need-to-know" basic science information and key references. Expedite decision making and clarify complex concepts with logical tables, digestible artwork, and easy-to-grasp schematics. Visualize more of the conditions you see in practice with over 3500 illustrations, of which over 1,400 are new: 1,039 clinical images, 398 pathology slides, and 152 schematics. Stay at the forefront of your field with updated treatment methods throughout, as well as an increased focus on patients with skin of color. Get an enhanced understanding of the foundations of dermatology in pathology, the clinical setting, and dermoscopy with a completely rewritten introductory chapter. Better comprehend the clinical-pathological relationship of skin disease with increased histologic coverage. Bologna's Dermatology is the ultimate multimedia reference for residents in training AND the experienced practitioner.

The vast, and vastly influential, American military machine has been aided and abetted by cinema since the earliest days of the medium. The US military realized very quickly that film could be used in myriad ways: training, testing, surveying and mapping, surveillance, medical and psychological management of soldiers, and of course, propaganda. Bringing together a collection of new essays, based on archival research, Wasson and Grieveson seek to cover the complex history of how the military deployed cinema for varied purposes across the the long twentieth century, from the incipient wars of US imperialism in the late nineteenth century to the ongoing War on Terror. This engagement includes cinema created and used by and for the military itself (such as training films), the codevelopment of technologies (chemical,

mechanical, and digital), and the use of film (and related mass media) as a key aspect of American "soft power," at home and around the world. A rich and timely set of essays, this volume will become a go-to for scholars interested in all aspects of how the military creates and uses moving-image media.

In this comprehensive and highly interdisciplinary companion, contributors reflect on remix across the broad spectrum of media and culture, with each chapter offering in-depth reflections on the relationship between remix studies and the digital humanities. The anthology is organized into sections that explore remix studies and digital humanities in relation to topics such as archives, artificial intelligence, cinema, epistemology, gaming, generative art, hacking, pedagogy, sound, and VR, among other subjects of study. Selected chapters focus on practice-based projects produced by artists, designers, remix studies scholars, and digital humanists. With this mix of practical and theoretical chapters, editors Navas, Gallagher, and burrough offer a

tapestry of critical reflection on the contemporary cultural and political implications of remix studies and the digital humanities, functioning as an ideal reference manual to these evolving areas of study across the arts, humanities, and social sciences. This book will be of particular interest to students and scholars of digital humanities, remix studies, media arts, information studies, interactive arts and technology, and digital media studies.

Armed with razor-sharp teeth and capable of drinking many times its volume of blood, the leech is an unlikely cure for ill health. Yet that is exactly the role this worm-like parasite has played in both Western and Eastern medicine throughout history. In this book, Robert G. W. Kirk and Neil Pemberton explore how the leech surfaces in radically different spheres. The ancients used them in humeral medicine to bring the four humors of the body—blood, phlegm, and black and yellow bile—back into balance. Today, leeches are used in plastic and reconstructive surgery to help reattach severed limbs and remove pools of blood before it kills tissue. Leeches have also

been used in a nineteenth-century meteorological barometer and a twentieth-century biomedical tool that helped win a Nobel Prize. Kirk and Pemberton also reveal the dark side of leeches as they are portrayed in fiction, film, and popular culture. From Bram Stoker's *Dracula* to a video game player's nemesis, the leech is used to represent the fears of science run amok. Leech shines new light on one of humanity's most enduring and unlikely companions.

Used as both a core textbook in PT programs and as a clinical reference, *Physical Therapy for Children, 4th Edition*, provides the essential information needed by PTs, both student and professional, when working with children. Like the previous bestselling editions, the 4th edition follows the practice pattern categories of the *Guide to Physical Therapist Practice* and uses the IFC model of the disabling process as it presents up-to-date evidence-based coverage of treatment. In this latest edition, Suzann Campbell DeLapp, Robert J. Palisano, and

Margo N. Orlin have added more case studies and video clips, additional chapters and Medline-linked references online, and Evidence to Practice boxes to make it easy to find and remember important information. Provides comprehensive foundational knowledge in decision making, screening, development, motor control, and motor learning, the impairments of body function and structure, and the PT management of pediatric disorders. Reflects a family-centered care model throughout to help you understand how to involve children and their caregivers in developing and implementing intervention plans. Emphasizes an evidence-based approach that incorporates the latest research for the best outcomes. Follows the practice pattern guidelines of the *Guide to Physical Therapist Practice, 2nd Edition* which sets the standard for physical therapy practice. Features the International Classification of Function, Disability, and Health (ICF) of the World Health Organization (WHO) as the model for the disabling process, emphasizing activity rather than functional limitations and participation rather than disability in keeping with the book's focus

on prevention of disability. Provides extensive case studies that show the practical application of material covered in the text and are often accompanied by online video clips illustrating the condition and its management. Makes it easy to access key information with plenty of tables and boxes that organize and summarize important points. Clearly demonstrates important concepts and clinical conditions you'll encounter in practice with over 800 illustrations. Takes learning to a deeper level with additional resources on the Evolve website featuring: Over 40 video clips that correspond to case studies and demonstrate conditions found in each chapter Helpful resources, including web links Questions and exercises you'll find helpful when preparing for the pediatric specialist certification exam

A pointed look at the state of tech-based mental healthcare and what we must do to change it Proponents of technology trumpet it as the solution to the massive increase in the mental distress that confronts our nation. They herald the

arrival of algorithms, intelligent chatbots, smartphone applications, telemental healthcare services, and more—but are these technological fixes really as good as they seem? In *Therapy Tech*, Emma Bedor Hiland presents the first comprehensive study of how technology has transformed mental healthcare, showing that this revolution can't deliver what it promises. Far from providing a solution, technological mental healthcare perpetuates preexisting disparities while relying on the same failed focus on personal responsibility that has let us down before. Through vivid, in-depth case studies, *Therapy Tech* reveals these problems, covering issues including psychosurveillance on websites like Facebook and 7 Cups of Tea, shortcomings of popular AI "doctors on demand" like Woebot, Wysa, and Joy, and even how therapists are being conscripted into the gig economy. Featuring a vital coda that brings *Therapy Tech* up to date for the COVID era, this book is the first to give readers a large-scale analysis of mental health technologies and the cultural changes they have enabled. Both a sobering dissection of the current state of

mental health and a necessary warning of where things are headed, *Therapy Tech* makes an important assertion about how to help those in need of mental health services today.

An Interdisciplinary Perspective OUP USA Digital health and medical informatics have grown in importance in recent years, and have now become central to the provision of effective healthcare around the world. This book presents the proceedings of the 30th Medical Informatics Europe conference (MIE). This edition of the conference, hosted by the European Federation for Medical Informatics (EFMI) since the 1970s, was due to be held in Geneva, Switzerland in April 2020, but as a result of measures to prevent the spread of the Covid19 pandemic, the conference itself had to be cancelled. Nevertheless, because this collection of papers offers a wealth of knowledge and experience across the full spectrum of digital health and medicine, it was decided to publish the submissions accepted in the review process and confirmed by the Scientific Program Committee for publication, and these are published here as planned. The 232

papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference.

Offering an overview of current trends and developments in digital health and medical informatics, the book provides a valuable information resource for researchers and health practitioners alike.

The book explores contemporary self-taking practices; digital experiences of love, romance and infidelity; sexting rituals; self-tracking habits; strategies used by the Internet famous; and the power of hashtag campaigns and memes in espousing a cause. Rejecting binary narratives on digital cultures, it showcases the fascinating ways in which we use our

digital devices, social media platforms, and apps by drawing upon academic research, everyday observations and a determination to challenge assumptions and hasty generalizations. It also engages with emerging narratives on online authenticity, privacy, digital detox, and the digital divides prevalent both in India and abroad.
