And the BJT of the optocoupler is pulled up to the VCC. Now this VCC is the internal LDO output of this DC/DC converter, which is at 5 volt. So the comp pin is pulled up to 5 volt, and that's how you are trying to regulate this flyback design. We will study the compensation of this design at 5 volt input, 12 volt output, at 2 amps. Isolated flyback compensation techniques | TI Training Properly implemented, the output of a compensation network (A (s)) together with the feedback voltage (V FB) divider will tune control-loop characteristics to ensure DC (zero frequency) gain is high, crossover frequency (or bandwidth) (f c) is high, and good phase- and gain-margins result in a switching regulator with good dynamic response, line- and load-regulation, and stability. Designing Compensator Networks | DigiKey Great sales compensation plans need to accomplish quite a lot... It needs to provide fair compensation to employees in customer-facing roles. It needs to incentivize specific behaviors and actions that suit the needs of both the company and the customer. And of course, a strong sales comp plan needs to motivate reps to hit goals that grow the company while still maintaining a profit margin.
