Robinson's Genetics for Cat Breeders and Veterinarians Elsevier Health Sciences

The Vets Turn Pale. . . George, a male calico, was a genetic anomaly, a manifestation of something that isn't supposed to happen, a creature so rare that even most veterinarians have never seen one. His curious existence sparked Laura Gould's long search through the archives of genetics to unearth the charming and valiant roles played by early cat geneticists, as well as cats themselves, in the study of genes and how they work. For everyone with an interest in cats and cat breeding, this is an unforgettable and often hilarious account of the intersecting lives of cats and geneticists. The field of genetics has exploded since 1992, when the first edition of Cats Are Not Peas was completed. Thus a lengthy Addendum is included in this new edition, providing the reader with the terminology and concepts needed to understand two burgeoning new areas in which cats have

again had significant roles to play--the sequencing of genomes and the production of clones.

These descriptions allow you to view with increasing wonder the world around you and to think seriously about whether you would like to have your personal genome mapped or your cat cloned, both of which are now possible (if you can afford it).

The Bengal is a domestic cat breed with exotic blood. Developed from the Asian Leopard Cat (*Prionailurus bengalensis*, formerly *Felis benghalensis*) and the domestic *Felis catus*, this breed can be as much as 1/8 Asian Leopard Cat. The Asian Leopard Cat (ALC) is found in India, eastward into China and down through the Malaysian Peninsula. ALCs were bred to Egyptian and Indian Maus, Burmese and Domestic shorthairs. As the breedings progressed, the offspring were bred back to the ALC. The first three generations of these cross breedings are considered Foundation Bengals. The fourth generation (those with an ALC as a great-great grandparent) is considered SBT (stud book tradition) and is eligible for competition in cat shows. 6 All male Foundation Bengals are sterile. The female hybrids are bred back to male domestic cats. Mrs. Jean Mill of Covina, California, first started breeding these cats in the early 1960s, but abandoned her first effort. She

started again in the late 1970s with eight females, all first generation hybrids. Dr. Willard Centerwall, a pediatrician and geneticist at University of California at Davis, provided her with these eight females. With these cats and two domestic shorthaired males (one from Delhi, India), Mrs. Mill established the breed. It closely resembles the Asian Leopard Cat and has championship status in TICA and the ACFA as well as other international registries. TICA registration rules insist that all Bengals in the show ring be the products of at least three generations of Bengal to Bengal breedings.

Cats Are Not Peas CRC Press

A guide for the cat lovers about the cat behavior, cat attractants, cat breeds, cat health and food, type of cats, cats as pets, fictional cats, films about cats, historical cats. A book full with pictures of the most important cat breeds, tips and advice for cat behavior, cat diseases and how to take care of the cats. The cat, also called the domestic cat or house cat, is a small feline carnivorous mammal of the subspecies *Felis silvestris catus*. Its most immediate pre-domestication ancestor is the African wild cat, *Felis silvestris lybica*. The cat has been living in close association with humans for at least 3,500 years; the Ancient Egyptians routinely used cats to keep mice and other rodents (mostly rats) away from their grain (and also believed that cats were sacred to the goddess Bastet). The history of the domestic cat may stretch back even further, as 8,000-year-old bones of humans and cats were found buried together on the island of Cyprus.

About cats TIBCC

In this timely and controversial work, Sue Hubbell contends that the concept of genetic engineering is anything but new, for humans have been tinkering with genetics for centuries.

Focusing on four specific examples -- corn, silkworms, domestic cats, and apples -- she traces the histories of species that have been fundamentally altered over the centuries by the whims and needs of people.

Breed Predispositions to Disease in Dogs and Cats Xlibris Corporation
