In the period between the Civil War and World War I, German universities provided North American women with opportunities in graduate and professional training that were not readily available to them at home. This training allowed women to compete to a greater degree with men in increasingly professionalized fields. In return for such opportunities, these women played a key

role in opening up German universities to all women. Many devoted the rest of their lives to creating better research and graduate opportunities for other women, forever changing the course of higher education in North America. This study provides accounts of the incredible barriers encountered by these first women students in Europe. It documents their perseverance and hard-won triumphs and includes as well the stories of the progressive men who mentored them and fought for their rights to higher education. Never before has documentation of so many North American students at German-speaking universities been included in one volume. This collection

of stories from women across disciplines makes it possible to assess the truly remarkable nature of their combined contributions to higher education and research in North America and Europe.

 Søren Kierkegaard
 Presents over 1,000 entries covering theories, discoveries, concepts, and definitions, and includes biographical entries on prominent mathematicians from antiquity to the present.

Cornell University Courses of Study

Princeton University Press
 "The day will come when not only my writings, but precisely my life--the intriguing secret of all the machinery--will be studied and studied."
 Søren Kierkegaard's remarkable combination of genius and peculiarity made this a fair if arrogant

prediction. But Kierkegaard's life has been notoriously hard to study, so complex was the web of fact and fiction in his work. Joakim Garff's biography of Kierkegaard is thus a landmark achievement. A seamless blend of history, philosophy, and psychological insight, all conveyed with novelistic verve, this is the most comprehensive and penetrating account yet written of the life and works of the enigmatic Dane who changed the course of intellectual history. Garff portrays Kierkegaard not as the all-controlling impresario behind some of the most important works of modern philosophy and religious thought--books credited with

founding existentialism and prefiguring postmodernism--but rather as a man whose writings came to control him.

Kierkegaard saw himself as a vessel for his writings, a tool in the hand of God, and eventually as a martyr singled out to call for the end of "Christendom." Garff explores the events and relationships that formed Kierkegaard, including his guilt-ridden relationship with his father, his rivalry with his brother, and his famously tortured relationship with his fiancée Regine Olsen. He recreates the squalor and splendor of Golden Age Copenhagen and the intellectual milieu in which Kierkegaard found himself increasingly embattled

and mercilessly caricatured. Acclaimed as a major cultural event on its publication in Denmark in 2000, this book, here presented in an exceptionally crisp and elegant translation, will be the definitive account of Kierkegaard's life for years to come.

History of Universities

XXXIV/1 contains the

customary mix of

learned articles which

makes this publication

an indispensable tool

for the historian of higher education. This volume offers a global history of research education in the nineteenth and twentieth centuries.

History of Universities: Volume XXXIV/1

Complex problem solving (CPS) and related topics such as dynamic decision-making (DDM) and complex dynamic control (CDC) represent multifaceted psychological phenomena. In a broad sense, CPS encompasses learning, decision-making, and acting in complex and dynamic situations. Moreover, solutions to problems that people face in such situations are often generated in teams or groups. This adds another layer of complexity to the

situation itself because of the emerging issues that arise from the social dynamics of group interactions. This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task (e.g. minimal complex system tests), which is a view taken by the psychometric community. The proposed approach taken here is that because CPS is multifaceted, multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other. Thus, this Research Topic is aimed at showcasing the latest work in the fields of CPS, as well as DDM and CDC that

takes a holist approach to investigating and theorizing about these abilities. The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS, DDM and CDC. This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another, what learning conditions result in transferable knowledge and skills, and how these features can be trained.
