LAYLA RILEY

Includes Mass Transfer Analysis Prentice Hall
The Definitive, Fully
Updated Guide to
Separation Process
Engineering—Now with
a Thorough
Introduction to Mass
Transfer Analysis
Separation Process
Engineering, Third
Edition, is the most
comprehensive,
accessible guide
available on modern
separation processes
and the fundamentals

of mass transfer. Phillip
C. Wankat teaches
each key concept
through detailed,
realistic examples
using real
data—including up-to-
date simulation
practice and new
spreadsheet-based
exercises. Wankat
thoroughly covers each
of today's leading
approaches, including
flash, column, and
batch distillation; exact
calculations and
shortcut methods for
multicomponent
distillation; staged and
packed column design;

absorption; stripping; and more. In this edition, he also presents the latest design methods for liquid-liquid extraction. This edition contains the most detailed coverage available of membrane separations and of sorption separations (adsorption, chromatography, and ion exchange). Updated with new techniques and references throughout, Separation Process Engineering, Third Edition, also contains more than 300 new homework problems, each tested in the author's Purdue University classes. Coverage includes Modular, up-to-date process simulation examples and homework problems, based on Aspen Plus

and easily adaptable to any simulator Extensive new coverage of mass transfer and diffusion, including both Fickian and Maxwell-Stefan approaches Detailed discussions of liquid-liquid extraction, including McCabe-Thiele, triangle and computer simulation analyses; mixer-settler design; Karr columns; and related mass transfer analyses Thorough introductions to adsorption, chromatography, and ion exchange—designed to prepare students for advanced work in these areas Complete coverage of membrane separations, including gas permeation, reverse osmosis, ultrafiltration, pervaporation, and key applications A full chapter on economics

and energy
conservation in
distillation Excel
spreadsheets offering
additional practice with
problems in distillation,
diffusion, mass
transfer, and
membrane separation
