Design of a Wind  
Power Plant - Wind  
Power in ...This guide is  
primarily concerned  
with the collector  
systems grounding for  
wind power plants. This  
guide is not intended  
for the wind power  
plant substation,  
however since the  
substation is typically  
interconnected with  
the collector system,  
its design might affect  
or be affected by the  
collector system.IEEE  
P2760 - TechstreetA  
transient analysis was  
performed for a wind  
plant design which  
utilizes larger amounts  
of generation on feeder  
circuit breakers. The  
studied wind farm  
power system included  
a circuit with 39 - GE  
2.72 MW wind turbines

and a very long feeder circuit with a home-run cable section of 21,995 feet and a total collector circuit of 213,985 feet. Wind Plant Transient Evaluation Studies - EnerNex The overall function of wind farm collector system is to collect power from individual wind turbine and maximize the overall energy generation by taking into account the installation cost and performance. Various configurations for wind farm collector system have been either employed or proposed as a conceptual design [24–26]. Review of DC System Technologies for Large Scale ... Typical wind plant collection system voltage and KVA ratings are at the extreme end of the

distribution class IEEE Standards. The wtg padmount transformer is subjected to thermal cycling that is more severe than in a typical distribution transformer as the output of the turbine is constantly changing with the wind.

M.R. Behnke's research works
