Methods for analyzing time series - Minitab
 Time Series Analysis Using Minitab You can use Stat > Time Series > ARIMA for any type of time series data. However, Minitab offers alternative analyses that you can use depending on whether your data have a trend or a seasonal component. Your data do not have a trend or a seasonal component Which time series analysis should I use? - Minitab Minitab offers several analyses that let you to analyze time series. These analyses include simple forecasting and smoothing methods, correlation analysis methods, and ARIMA modeling. Although correlation analysis can be done separately from ARIMA modeling, Minitab presents the correlation methods as part of ARIMA modeling. Methods for analyzing time series - Minitab Minitab offers analyses that you can use depending on whether your data have a trend. Your data do not have a trend When your data don't have a trend you can use moving average or single exponential smoothing. Mac: Statistics > Time Series > Moving Average Which time series analysis should I use? - Minitab Express Minitab offers several simple forecasting and smoothing methods, correlation analysis methods, and ARIMA modeling techniques to analyze your time series data. Time series plot To plot the data in time order to determine whether there is a trend or seasonal pattern, create a time series plot. In Minitab, choose Stat > Time Series > Time Series Plot. Minitab? - Minitab The text presents the underlying theories of time series analysis that are needed to analyze time-oriented data and construct real-world short- to medium-term statistical forecasts. An ideal textbook for upper-undergraduate and graduate-levels courses in forecasting and time series. Introduction to Time Series Analysis and Forecasting | Minitab You can use naive forecasting to establish a benchmark for your time series model. Compare the accuracy measures of the naive model and a model using a different method. If the naive model is a better fit, you shouldn't use the other model since the naive model is a better fit and is more simple. Forecasting with time series analysis - Minitab A trend can be linear, or it can exhibit some curvature. If your data exhibit a trend, you can use a time series analysis to model the data and generate forecasts.
