The text begins by reviewing, in a simple and precise manner, the physical principles of three pillars of Refrigeration and Air Conditioning, namely thermodynamics, heat transfer, and fluid mechanics. Following an overview of the history of refrigeration, subsequent chapters provide exhaustive coverage of the principles, applications and design of several types of refrigeration systems and their associated components such as compressors, condensers, evaporators, and expansion devices. Refrigerants too, are studied elaboratively in an exclusive chapter. The second part of the book, beginning with the historical background of air conditioning in Chapter 15, discusses the subject of psychrometrics being at the heart of understanding the design and implementation of air conditioning processes and systems, which are subsequently dealt with in Chapters 16 to 23. It also explains the design practices followed for cooling and heating load calculations. Each chapter contains several worked-out examples that clarify the material discussed and illustrate the use of

basic principles in engineering applications. Each chapter also ends with a set of few review questions to serve as revision of the material learned.

"Every Margaret Maron is a celebration of something remarkable." -- New York Times Book Review "Maron writes with wit and sophistication." -- USA Today "There's nobody better." -- Chicago Tribune NYPD Detective Sigrid Harald is still reeling from the untimely death of her lover, acclaimed painter Oscar Nauman, when she is called to investigate the poisoning of two homeless men in the West Village. As she examines the mysterious deaths, Sigrid uncovers a grim neighborhood scandal surrounding two influential women: one a haughty mafia widow, the other a retired opera prima donna, both with dark secrets they've kept under wraps for decades. Was the poison really meant for the homeless men, or were they merely unintended victims as the decades-long feud between the two women comes to a head?
