The biological sciences cover a broad array of literature types, from younger fields like molecular biology with its reliance on recent journal articles, genomic databases, and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries. *Using the Biological Literature: A Practical Guide, Fourth Edition* is an annotated guide to selected resources in the biological sciences, presenting a wide-ranging list of important sources. This

completely revised edition contains numerous new resources and descriptions of all entries including textbooks. The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature. It covers both print and electronic resources including monographs, journals, databases, indexes and abstracting tools, websites, and associations—providing users with listings of authoritative informational resources of both classical and recently published works. With chapters devoted to each of the main fields in the basic biological sciences, this book offers a guide to the best and most up-to-date resources in biology. It is appropriate for anyone interested in searching the biological literature, from undergraduate students to faculty, researchers, and librarians. The guide includes a supplementary website dedicated to keeping URLs of electronic and web-based resources up to date, a popular feature continued from the third edition.

*Using the Biological Literature* Hodder Education  
*Natal Signs: Cultural Representations of Pregnancy, Birth and Parenting* explores some of the ways in which reproductive experiences are taken up in the rich arena of cultural production. The chapters in this collection pose questions, unsettle assumptions, and generate broad imaginative spaces for thinking about representation of pregnancy, birth, and parenting. They demonstrate the ways in which practices of consuming and using representations carry within them the productive forces of creation. Bringing together an eclectic and vibrant range of perspectives, this collection offers readers the possibility to rethink and reimagine the diverse meanings and practices of representations of these significant life events. Engaging theoretical reflection and creative image making, the contributors explore a broad range of cultural signs with a focus on challenging authoritative representations in a manner that seeks to reveal rather than conceal the insistently problematic and contestable nature of image culture. *Natal Signs* gathers an exciting set of critically engaged voices to reflect on some of life's most meaningful moments in ways that affirm natality as the renewed promise of possibility.

*Moore's Clinically Oriented Anatomy* CRC Press  
 The SAGE Encyclopedia of Stem Cell Research, Second Edition is filled with new procedures and exciting medical breakthroughs, including executive orders from the Obama administration reversing barriers to research imposed under the Bush administration, court rulings impacting NIH funding of research based on human embryonic stem cells, edicts by the Papacy and other religious leaders, and the first success in cloning human stem cells. Stem cell biology is clearly fueling excitement and potential in traditional areas of developmental biology and in the

field of regenerative medicine, where they are believed to hold much promise in addressing any number of intractable medical conditions. This updated second edition encyclopedia will expand on information that was given in the first edition and present more than 270 new and updated articles that explore major topics in ways accessible to nonscientists, thus bringing readers up-to-date with where stem cell biology stands today, including new and evolving ethical, religious, legal, social, and political perspectives.  Human Papillomavirus: *Proving and Using a Viral Cause for Cancer* presents a steady and massive accumulation of evidence about the role of HPV and prevention of HPV-induced cancer, along with the role and personal commitment of many scientists of different backgrounds in establishing global relevance. This exercise involved years of personal commitment to proving or disproving an idea that aroused initial skepticism, and that still has difficult implications for some. It remains one of the big successes of medicine that exploited both established medical science dating back to the nineteenth century and new molecular genetic science during a time of transition in medicine. Presents a comprehensive, up-to-date review of the role of HPV in cancer from those involved in its study Includes the way evidence on the role and utility of HPV based prevention has been accumulated over almost 40 years Gives a series of vignettes of individual scientists involved in the development of the science of HPV and cancer at different stages and their experiences and reasons for involvement

This text traces the history of contraception and abortifacients from ancient Egypt to the 17th century, and discusses the scientific merit of the ancient remedies and why this knowledge about fertility control was gradually lost over the course of the Middle Ages.

Scientists and philosophers have long struggled to answer the questions of when human life begins and when human life has inherent value. The phenomenon of identical (monozygotic) twinning presents a significant challenge to the view that human life and human personhood begin at conception. The fact that a single embryo can split to generate two (or more) genetically identical embryos seems to defy the notion that prior to splitting an embryo can be a single human individual. In Untangling Twinning, Maureen Condic looks at the questions raised by human twinning based on a unique synthesis of molecular developmental biology and Aristotelian philosophy. She begins with a brief historical analysis of the current scientific perspective on the embryo and proceeds to address the major philosophic and scientific concerns regarding human twinning and embryo fusion: Is the embryo one human or two (or even more)? Does the original embryo die, and if not, which of the twins is the original? Who are the parents of the twins? What do twins, chimeras, cloning, and asexual reproduction in humans mean? And what does the science of human embryology say about human

ensoulment, human individuality, and human value? Condic's original approach makes a unique contribution to the discussion of human value and human individuality, and offers a clear, evidence-based resolution to questions raised by human twinning. The book is written for students and scholars of bioethics, scientists, theologians, and attorneys who are involved in questions surrounding the human embryo.

Military service members and veterans are perhaps particularly vulnerable to sexual dysfunction given some common experiences in the military and during combat deployments. Deployment to a combat theater is an inherently stressful experience, made worse with actual combat exposure and other physical and psychological hardships and trauma. This in turn contributes to higher rates of physical damage (including traumatic brain injury and amputations), post-traumatic stress

disorder, and unhealthy coping mechanisms (alcohol and substance abuse). Medications commonly prescribed to treat or manage these conditions can also contribute to sexual dysfunction. Perhaps worst of all, the most intense period of experiencing these complications is likely to occur in the service member's or veteran's 20s and early 30s, the life stage at which most Americans are dating, selecting a partner, and creating a family. Sexual dysfunction can have significant impacts on all of those important activities. This book serves as an authoritative resource for military service members, veterans, and those who love them, on all manner of sexual health issues. Starting with an introduction to the basic concepts of sexual health, Helmer then goes on to discuss the effects of combat on overall health, sexual health and function, and differences in those effects on men and women. Including Veterans' stories throughout, the book illustrates some of the challenges and complex situations empathically and in nonjudgmental terms. While many service members join and experience combat before the age of 30, the author also considers the effects of aging and life stage on sexual health and function in military personnel. Finally, Helmer clearly articulates a process for determining if there is a sexual health issue that rises to the level of a problem and what can be done about it. This is handled with a positive, hopeful tone and general, yet effective, suggestions on where and how to seek assistance.
