 Simple 2-D Soil-Structure Interaction Model of a RC Shear-Wall Building in OpenSees OpenSees is used to simulate the nonlinear response of simple structures located at 25,000 points on a 10x10 km region subjected to a M=6 strike-slip fault. The contour plots show the maximum displacement of structures with a 1 second

vibration period and different ductility levels. The strike-slip produces regions in which fault-normal response is dominant and other, smaller regions, in which fault ...
