*Thinking Geometrically: A Survey of Geometries* is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors. Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure, historical development, and deep interconnectedness of the ideas. Students with less mathematical preparation than upper-division mathematics majors can successfully study the topics needed for the preparation of high school teachers. There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students. These chapters include Euclidean Geometry, Axiomatic Systems and Models, Analytic Geometry, Transformational Geometry, and Symmetry. Topics in the other chapters, including Non-Euclidean Geometry, Projective Geometry, Finite Geometry, Differential Geometry, and Discrete Geometry, provide a broader view of geometry. The different chapters are as independent as possible,

while the text still manages to highlight the many connections between topics. The text is self-contained, including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms. Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters. While some chapters use the language of groups, no prior experience with abstract algebra is presumed. The text will support an approach emphasizing dynamical geometry software without being tied to any particular software.

National Numeracy Strategy (NNS) for Key Stage 3 will be introduced into Secondary Schools in September 2001. The NNS document: Framework for Teaching Mathematics in Years 7 to 9, is based on the National Curriculum, but offers a very different interpretation of some of the expected learning outcomes for year 7 to 9. This practical book, interprets and explains the document for busy practitioners, spells out the expectations of the framework and offers guidance on how to fulfil these, describes and explains the types of teaching methods for maximising students' learning, and includes many practical ideas for classroom activities within the framework of the NNS.
