Practicing evidenced-based medicine some 25 centuries ago, Hippocrates proclaimed "Let food be thy medicine and medicine be thy food." This advice parallels the common American saying, "You are what you eat," and is supported by a National Institute of Health recommendation to consume as many as eight servings of fruits and vegetables daily to prevent

An all encompassing discussion of nutrition elements, minerals,

and vitamins for horses of all performance types. The book will consist of five sections: Basic Nutrition, Nutrients A-Z, Nutrition for the Performance Horse, Nutritional Solutions for Health Problems, and a Consumer's Guide to commercial supplements. The A-Z section will be in chart format: a one to two page chart which will describe each nutrient; including food sources, symptoms indicating its requirement, benefits, and interaction with other nutrients. Icon illustrations will indicate the required supplemental dosages of each nutrient for each of the five defined levels of horse activity or work level. Nutrition solutions for basic health problems will be discussed, including recommended nutrient combinations and dosages. Special attention is given to the performance horse -- increased nutrient levels are recommended for various levels and phases

of performance, training, competition, long-distance, etc. The consumer's guide will provide market sources for nutritional products for horses, a result of a survey of over 200 known equine nutritional product dealers.

Monitoring and Emergency Therapy John Wiley & Sons

Are there silent, yet powerful, ingredients missing from most horse training techniques and riding instruction? In her research of horsemen and women who appear to have a gift with horses, Dr. Fay outlines the invisible things these equestrians do that make their interactions with horses appear effortless. As a research scientist and life-long equestrian, Dr. Fay spent more than two decades searching for scientific explanations for why some people are able to develop seemingly spiritual relationships with horses. She discovered that equestrians with this gift merely know how to use their natural abilities in a way that most of us were never taught. These abilities already exist inside of each

one of us, so we merely need understand how to use them. But we also need to be willing to open our eyes and hearts and let go of what we believe is possible. Within the pages of this book, you will gain insights into how you can develop your gift with horses. You will learn how you are unconsciously "talking" to your horse through your mind and body. But more importantly, you will see how easy it is to turn these unconscious conversations into ones that are meaningful to your horse. This is not a book about animal communication. Instead, this is a guide to using the energy field, along with the power of your own mind and body to influence your horse in a gentle and quiet, yet highly effective way. The principles presented in this book work regardless of the type of horse you have or the discipline you ride. There is no need for special training gadgets because you already have everything you need. Once you begin to implement the principles and see the profound changes in yourself and your horse, you may never view traditional horse-training methods in the same way. Through real life stories and simple exercises, Dr. Fay guides readers to a greater awareness of their untapped abilities. She teaches us how to use our innate gifts to create a sacred space where communion with the horse occurs naturally and spontaneously.

When owning, training, riding, and showing horses, there is a certain “look” to which one aspires. World-class “turnout”—a horse in peak condition, perfectly coiffed and luminous with health, outfitted with gleaming and well-fit tack appropriate for

his sport—can take your breath away. And while it can certainly play a significant role in a competitive rider's success, it is just as appealing to have any horse "groomed to the nines," whether he's headed for an afternoon lesson or just out on the trail. Achieving this superior look is not just about clean tack, shiny brass, spotless stockings, or perfect braids. The most important steps are in the day-to-day nitty-gritty of grooming and caring for the horse: noticing "something not-quite-right" about the way the horse looks or moves before it becomes "something wrong"; brushing and combing and trimming a little every day so the horse's skin and coat remain healthy; knowing how to prepare a horse properly for training, and how to cool him down afterward. Now, two of the best professional grooms in the business share their trade secrets, with over 1200 color photographs accompanying the ultimate modern-day guide for all riders who want their horses to look and feel their best.

Degenerative joint disease (DJD) is one of the most prevalent musculoskeletal disorders seen in horses, resulting in loss of performance ability, early retirement and significant cost to horse owners. Biomarkers of tissue turnover may offer a sensitive diagnostic for the early detection of joint pathology. The objectives of this thesis were to establish inter- and intraindividual variance of joint tissue biomarkers (CTX-II, PIIANP and NO) in an equine population, determine whether there was a correlation between biomarker concentrations and lameness, and evaluate the efficacy of Steadfast® Equine for use in horses with

naturally acquired lameness. CTX-II concentration decreased with increasing lameness score (P0.0001), however there was no effect of lameness score on PIIANP concentration (P0.21) or NO concentration. There was no effect (P > 0.5) of supplementation with Steadfast® Equine on lameness score, CTX-II concentration, or PIIANP concentration compared to the placebo group. The culmination of the data of these two trials demonstrates the potential utility of serum CTX-II concentration in order to non-invasively evaluate DJD and also several confounding variables and limitations, such as season, gender and a precise standard against which to measure joint damage.

Basic and Clinical Sciences of the Equine Athlete CreateSpace Relationships with horses, whether for companionship or competition, are complex and ever-changing. This is one of the reasons why "horsemanship" can become a lifelong pursuit: There is always a balance to be struck with our equine partners, and it demands continual growth and understanding on our side. In this book, horsewoman Lynn Acton explains that when the focus in the relationship is on what we want from the horse, his compliance becomes the measure of success, and what he thinks and feels is often overlooked. Is he calm, confident, and trusting? Or anxiously wishing he could escape? His behavior, performance, and reliability—in whatever discipline we prefer or equestrian sport we pursue—depend on the answers to those questions. Horses want security and social bonds. They want leaders they trust to protect them—not only from danger, but from stress. When we provide this security, they accept our rules. This not only puts us in charge, it makes our leadership more effective because we do not force it on them; they seek it. The

result is less anxiety, fewer behavior problems, more efficient learning, and better reliability. Acton refers to this relationship as Protector Leadership because being the “protector” is the foundation. Building methodology based on time-tested training theories that we are often exposed to in bits and pieces, Acton shows why Protector Leadership works and how to make it work for us, fitting the separate pieces together, and illustrating the connections with practical examples of real horses in everyday life.

Proper formulation of diets for horses depends on adequate knowledge of their nutrient requirements. A highly illustrated guide to simple yet effective methods for keeping horses sound, healthy, and performing their best. Over time, horses (like people) acquire postural habits, compensate for soreness and injury, and develop poor movement patterns. This limits performance ability, causes unsoundness and health issues, and ultimately undermines the horse's overall well-being. Jec Aristotle Ballou has made a name for herself advocating for

the horse and providing sensible instruction in his schooling, conditioning, and care. Her bestselling books and popular clinics are designed to enable any horse person to correctly apply proven principles that bring measurable progress while avoiding boredom and confusion. In her latest collection of mounted and unmounted corrective exercises, Ballou demonstrates how we can actively work to improve the horse's posture and movement, whether he is: An active performance or pleasure mount. An aging or older horse that benefits from gentle exercise. A horse being rehabilitated following injury, illness, or lack of conditioning. Ballou's positive cross-training techniques are free of shortcuts, and her guidelines for analyzing the horse's posture and way of going help readers gain a new awareness of the equine body. Applicable for all disciplines and full of quality color photographs to explain the exercises, this is an integral collection that optimizes how the horse uses his body and helps ensure he stays sounder and healthier for more years of his life.

Joints, like all tissues in the body, rely on nutrients for maintenance and repair. The horse's body prioritizes its use of nutrients, first supporting vital organs-heart, lungs, liver, kidneys and brain-then giving what nutrients are left over to the rest of the anatomy. It is vitally important that the horse's diet include sufficient nutrients to make it all the way to the organs at the end of the body's hierarchy, the joints. Supplementing for joint health without first establishing a nutritional foundation is a waste of effort and money. In Joint Health-A Nutritional Perspective, Dr. Juliet M. Getty explains joint structure and the dietary requirements to maintain or repair joints, then discusses various ingredients found in common joint supplements and their appropriate applications. The book is expanded from her teleseminar on the subject with additional valuable information about the nutritional basis for joint health.
