### Exploring the Practice of Statistics

W H Freeman & Company  
The Practice of Statistics is the most trusted program for AP<sup>®</sup> Statistics because it provides teachers and students with everything they need to be successful in the statistics course and on the AP<sup>®</sup> Exam. With the expert authorship of high school AP<sup>®</sup> Statistics

veterans, Daren Starnes and Josh Tabor and their supporting team of AP<sup>®</sup> teacher/leaders, The Practice of Statistics, Sixth edition (TPS6) has been crafted to follow the topical outline of the AP<sup>®</sup> Statistics course with careful attention paid to the style, nomenclature, and language used on the AP<sup>®</sup> Statistics exam. It combines a data analysis approach with the power of technology, innovative

pedagogy, and an extensive support program built entirely for the sixth edition. New resources, including a robust online homework program and an extensively revised TestBank, give teachers and students everything they need to realize success on the exam and in the course. This text assumes students have been exposed to

intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of

many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them.

Taken literally,  
the title "All of  
Statistics" is  
an  
exaggeration.  
But in spirit,  
the title is apt,  
as the book  
does cover a  
much broader  
range of  
topics than a  
typical

introductory  
book on  
mathematical  
statistics. This  
book is for  
people who  
want to learn  
probability  
and statistics  
quickly. It is  
suitable for  
graduate or  
advanced  
undergraduat  
e students in  
computer  
science,  
mathematics,  
statistics, and  
related  
disciplines.  
The book  
includes  
modern topics  
like non-  
parametric  
curve  
estimation,  
bootstrapping,  
and  
classification,  
topics that are

usually relegated to follow-up courses. The reader is presumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. Statistics, data mining, and machine learning are all concerned with collecting and analysing data.
