### RICHARD HAILEY

*Big Data* United Nations Publications

Big data are part of a paradigm shift that is significantly transforming statistical agencies, processes, and data analysis. While administrative and satellite data are already well established, the statistical community is now experimenting with structured and unstructured human-sourced, process-mediated, and machine-generated big data. The proposed SDN sets out a typology of big data for statistics and highlights that opportunities to exploit big data for official statistics will vary across countries and statistical domains. To illustrate the former, examples from a diverse set of countries are presented. To provide a balanced assessment on big data, the proposed SDN also discusses the key challenges that come with proprietary data from the private sector with regard to accessibility, representativeness, and sustainability. It concludes by discussing the implications for the statistical community going forward.

*The State of Food Security and Nutrition in the World 2019* Food & Agriculture Org.

Handbook on Geospatial Infrastructure in Support of Census Activities United Nations Publications

**Potential, Challenges and Statistical Implications** United Nations Publications

The Government Finance Statistics Manual 2014 (GFSM 2014)—describes a specialized macroeconomic statistical framework—the government finance statistics (GFS) framework—designed to support fiscal analysis. The manual provides the economic and statistical reporting principles to be used in compiling the statistics; describes guidelines for presenting fiscal statistics within an analytic framework that includes appropriate balancing items; and is harmonized with other macroeconomic statistical guidelines.

**Family Planning and the 2030 Agenda for Sustainable Development (Data Booklet)** OECD Publishing

FAO's Statistical Pocketbook complements the Statistical Yearbook, by providing, in an easy and simple way, quick access to top-level numbers, charts and maps on many dimensions of food and agriculture – from the characteristics of the sector to production, prices and trade, as well as food

security and nutrition and environmental aspects.

**Government Finance Statistics Manual** United Nations Publications

The primary objective of the manual is to foster a gender perspective in national statistics.

Recognising that systematic integration of gender in regular statistical activities is still missing in many countries, the manual has been designed to guide a sustainable development of gender statistics. The manual provides concrete information needed to accomplish three main goals: (a) achieve a comprehensive coverage of gender issues in data production activities; (b) incorporate a gender perspective into the design of surveys or censuses, by taking into account gender issues and gender-biases in measurement; and (c) improve data analysis and data presentation and deliver gender statistics in a format easy to use by policy makers and planners.

**World Statistics Pocketbook 2021** Food & Agriculture Org.

Since its early years, the United Nations has issued a series of international recommendations on population and housing censuses under the title "Principles and Recommendations for Population and Housing Censuses". These publication series, which are based on good national practices in

census taking, are widely used by national statistical offices and census officials in countries throughout the world in planning and carrying out population and housing censuses, as well as other related data collection activities, particularly demographic and socio-economic surveys. The recommendations provide guidance on the main characteristics of population and housing censuses, general material on census methodology, planning, and operations, and more detailed guidance on the content of censuses, in terms of topics for population and also housing. These series are currently revised to assist countries in preparing for the 2020 round of censuses by taking into account changes in methodology, technology, as well as the need for better data dissemination and utilization.

This package includes a physical copy of *Statistics: The Art and Science of Learning from Data* by Alan Agresti and Christine Franklin, as well as access to the eText and MyMathLab. *Statistics: The Art and Science of Learning from Data, Third Edition*, helps you become statistically literate by encouraging you to ask and answer interesting statistical questions. This book takes the ideas that have turned statistics into a central science in modern life and makes them accessible. The Third Edition has been edited for conciseness and clarity to keep you focused on the main concepts. The data-rich examples that feature intriguing human-interest topics now include topic labels to indicate which statistical topic is being applied.

**Manual** Food & Agriculture Org.

The United Nations population estimates and projections form a comprehensive set of demographic data to assess population trends at the global, regional and national levels. They are used in the calculation of many of the key development indicators commonly used by the United Nations system, including for more than one third of the indicators used to monitor progress towards the achievement of the Sustainable Development Goals. The 2019 revision of the *World Population Prospects* is the twenty-sixth edition of the official United Nations population estimates and projections, which have been prepared since 1951 by the Population Division of the Department of Economic and Social Affairs. The 2019 revision presents population estimates from 1950 until the present for 235 countries or areas, which have been developed through country-specific analyses of historical demographic trends. It builds on previous revisions by incorporating additional results from the 2010 and 2020 rounds of national population censuses as well as information from vital registration and recent nationally representative household sample surveys. The 2019 revision also presents population projections to the year 2100 that reflect a range of plausible outcomes at the global, regional and country levels. These Highlights summarise key population trends described by the estimates and projections presented in *World Population Prospects 2019*.

*Practical Guidebook on Data Disaggregation for the Sustainable Development Goals* Fao Statistical Pocketbook

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

*Integrating a Gender Perspective Into Statistics* World Bank Publications

This handbook shows how to develop and publish a minimum set of statistics and indicators on

women's and men's position in society. It is based on lessons learned in preparing *The World's Women 1970-1990: Trends and Statistics*, which was a collaborative effort of United Nations agencies to present a factual view of progress made globally towards advancing the situation of women relative to men. The World's Women generated demand for gender statistics publications that could be widely disseminated to users of varied backgrounds. This handbook is a step-by-step guide to the preparation of such publications in countries, from organizing a planning committee to promoting the final product. A main feature is the practical guidance and illustrations given on developing statistical indicators from national data sources.--Publisher's description.

*Digital Dividends* United Nations

The *World Statistics Pocketbook* is an annual compilation of key statistical indicators prepared by the United Nations Statistics Division of the Department of Economic and Social Affairs.

**Guidelines on data disaggregation for SDG Indicators using survey data** International Monetary Fund

The aim of this report is to present an overview of the 17 Goals using data currently available to highlight the most significant gaps and challenges.

**World Statistics Pocketbook 2020** United Nations Publications

The "leave no one behind" principle espoused by the 2030 Agenda for Sustainable Development requires measures of progress for different segments of the population. This entails detailed disaggregated data to identify subgroups that might be falling behind, to ensure progress toward achieving the Sustainable Development Goals (SDGs). The Asian Development Bank and the Statistics Division of the United Nations Department of Economic and Social Affairs developed this practical guidebook with tools to collect, compile, analyze, and disseminate disaggregated data. It also provides materials on issues and experiences of countries regarding data disaggregation for the SDGs. This guidebook is for statisticians and analysts from planning and sector ministries involved in the production, analysis, and communication of disaggregated data.

**Designing Household Survey Samples** Food & Agriculture Org.

The *State of Food Security and Nutrition in the World* gives updates on the prevalence of undernourishment globally and the absolute number of undernourished, as well as the latest estimates for a number of global nutrition targets. This latest edition looks at the role of economic slowdowns and downturns in the rise of hunger and makes policy recommendations to safeguard food security and nutrition worldwide.

**World Food and Agriculture - Statistical Yearbook 2021** Handbook on Geospatial Infrastructure in Support of Census Activities

This publication is an annual compilation of key statistical indicators prepared by the United Nations Statistics Division of the Department of Economic and Social Affairs. The topics covered include: agriculture, balance of payments, education, energy, environment, food, gender, health, industrial production, information and communication, international finance, international tourism, international trade, labour, migration, national accounts, population and prices.

*World Food and Agriculture - Statistical Pocketbook 2020* Food & Agriculture Org.

This report presents the yearly assessment of global progress towards the Millennium Development Goals (MDGs), determining the areas where progress has been made, and those that are lagging behind. The report is based on a master set of data compiled by the Inter-Agency and Expert group on MDG indicators led by the Statistics Division of the Department of Economic and

Social Affairs.

**Histories and Horizons** National Academies Press

The population and housing census is part of an integrated national statistical system, which may include other censuses (for example, agriculture), surveys, registers and administrative files. It provides, at regular intervals, the benchmark for population count at national and local levels. For small geographical areas or sub-populations, it may represent the only source of information for certain social, demographic and economic characteristics. For many countries the census also provides a solid framework to develop sampling frames. This publication represents one of the pillars for data collection on the number and characteristics of the population of a country.

**Millennium Development Goals Report 2015** United Nations

As a member of the working group on data disaggregation, the Food and Agriculture Organization of the United Nations (FAO) has taken numerous steps towards supporting Member Countries in the production of disaggregated estimates. Within this framework, these Guidelines offer methodological and practical guidance for the production of direct and indirect disaggregated estimates of SDG indicators having surveys as their main or preferred data source. Furthermore, the publication provides tools to assess the accuracy of these estimates and presents strategies for the improvement of output quality, including Small Area Estimation methods.

*Developing information, education and communication* African Minds

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action.

The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities. The designations used and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries. The term "country" as used in this publication also refers, as appropriate, to territories or areas. The designations "developed regions" and "developing regions" are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

*The World's Women 2015* Asian Development Bank

This publication offers a synthesis of the major factors at play in the global food and agricultural landscape. Statistics are presented in four thematic chapters, covering the economic importance of agricultural activities, inputs, outputs and factors of production, their implications for food security and nutrition and their impacts on the environment. The Yearbook is meant to constitute a primary tool for policy makers, researchers and analysts, as well as the general public interested in the past, present and future path of food and agriculture.
