[The Worldwide History of Telecommunications](#) Wiley Since the revolution in modern telecommunications that followed the invention of the telegraph, telecommunication networks have provided channels for the fast delivery of communications across national borders. This transnational nature of telecommunication networks have led to the establishment of international regulatory regimes on the subject. On the other hand, developing countries consider regional economic integration as a major strategy for promoting trade and development, telecommunications have been seen within this context as a strategic tool for facilitating regional economic integration. This has also led to the establishment of regional telecommunication regulatory regimes that aim to promote regional integration and regulatory harmonization. This book discusses telecommunication regimes established by international and regional organizations such as the United Nations, the International Telecommunication Union, the World Trade Organization, the African Union, the Economic Community of West African States, and the Southern African Development Community, among a number of others. It will be relevant to policy makers, regulators, lawyers, law students, investors and telecommunication operators, as well as any person interested in international and African regional telecommunication regimes. *Communications * Standard Dictionary* is a comprehensive compilation of terms and definitions used in communications and related fields. Communications is defined as the branch of science and technology concerned with the process of representing, transferring, and interpreting the meaning as signed to data by and among persons, places, or machines. Communication is defined as the transfer of information between a source (transmitter, light source) and a sink (receiver, photodetector) over one or more channels in accordance with a protocol, and in a manner suitable for interpretation or comprehension by the receiver; or as a method or means of conveying information of any kind from one person or place to another. In short, communications is a branch of science and technology, whereas communication pertains to the actual transfer of information. Thus, the word communication should be used as a modifier, as in communication center, communication deception, and communication line, just as in the field of electronics one speaks of electronic devices and electronic circuits.
