What are the  
conditions that foster  
true novelty and allow  
visionaries to set their  
eyes on unknown  
horizons? What have  
been the challenges  
that have spawned  
new innovations, and  
how have they shaped  
modern biology? In  
Dreamers, Visionaries,  
and Revolutionaries in  
the Life Sciences,  
editors Oren Harman  
and Michael R. Dietrich  
explore these  
questions through the  
lives of eighteen  
exemplary biologists

who had grand and  
often radical ideas that  
went far beyond the  
run-of-the-mill science  
of their peers. From  
the Frenchman Jean-  
Baptiste Lamarck, who  
coined the word  
"biology" in the early  
nineteenth century, to  
the American James  
Lovelock, for whom the  
Earth is a living,  
breathing organism,  
these dreamers  
innovated in ways that  
forced their  
contemporaries to  
reexamine comfortable  
truths. With this  
collection readers will  
follow Jane Goodall into  
the hidden world of  
apes in African jungles  
and Francis Crick as he  
attacks the problem of  
consciousness. Join  
Mary Lasker on her  
campaign to conquer  
cancer and follow  
geneticist George  
Church as he dreams

of bringing back woolly mammoths and Neanderthals. In these lives and the many others featured in these pages, we discover visions that were sometimes fantastical, quixotic, and even threatening and destabilizing, but always a challenge to the status quo.

The idea of the book entitled "Objective Life Science: MCQs for Life Science Examination" was born because of the lack of any comprehensive book covering all the aspects of various entry level life science competitive examinations in particular conducted by CSIR, DBT, ICAR, ICMR, ASRB, IARI, State and National Eligibility Test, but not limited to. This book, covers all the subjects of life science under 13 section namely, 1. Molecules and their interaction relevant to biology; 2. Cellular organization; 3. Fundamental processes; 4. Cell communication and cell signaling; 5. Developmental biology; 6. System physiology - Plant; 7.

System physiology - Animal; 8. Inheritance biology; 9. Diversity of life forms; 10. Ecological principles; 11. Evolution and behavior; 12. Applied biology and 13. Methods in biology. Each Section has been further divided into two parts with 200 short tricky questions and 100 applied conceptual questions. The ultimate purpose of this book is to equip the reader with brainstorming challenges and solution for life science and applied aspect examinations. It contains predigested information on all the academic subject of life science for good understanding, assimilation, self-evaluation, and reproducibility.
