This report follows up on an interim report released in February 2004 that focused on immediate needs in the areas of animal care and management, recordkeeping, and pest control. The report finds that the zoo has made good-faith efforts to correct deficiencies noted in the interim report and has made some noticeable improvements in the past year in zoo operations and animal care.

However, problems in areas such as staff training, workplace culture, and strategic planning still need to be addressed. Specifically, the report recommends that the zoo immediately develop and implement animal-care training programs to ensure that people who are directly responsible for the well-being of its animal collection are adequately prepared and competent. The report commends a zoo-initiated strategic planning process as a positive step, but recommends it contain a more detailed, comprehensive strategy of how it will meet short-term goals and that it should link plans to upgrade facilities with those to acquire animals. The zoo should also focus on improving communication among keepers, veterinarians, nutritionists, senior managers, and curators.

Forever Chemicals John Wiley & Sons Incorporated

A large number of chemicals are used on land at shore facilities, in the air in combat and reconnaissance aircraft, on seas around the world in surface vessels, and in submarine vessels by the navy and marine corps. Although the chemicals used are for the large part harmless, there is a significant amount of chemicals in use that can be health hazards during specific exposure circumstances. The Navy Environmental Health Center (NEHC) is primarily tasked with assessing these hazards. The NEHC completes its tasks by reviewing toxicological and related data and preparing health-hazard assessments (HHAs) for the different chemicals. Since the NEHC is continually asked to develop these HHAs, the National Research Council (NRC) was asked to assess independently the validity and effectiveness of NEHC's HHA process, in order to determine whether the process

as implemented provides the Navy with the best, comprehensive, and defensible evaluations of health hazards and to identify any elements that might require improvement. The task was assigned to the Board on Environmental Studies and Toxicology's Committee on Toxicology's (COT's) Subcommittee on Toxicological hazard and Risk Assessment. Review of the U.S. Navy Environmental Health Center's Health-Hazard Assessment Process presents the subcommittee's report. The report is the work of expertise in general toxicology, inhalation toxicology, epidemiology, neurotoxicology, immunotoxicology, reproductive and developmental toxicology, pharmacology, medicine, risk assessment, and biostatistics. It is based on its review of documents provided by NEHC, presentations by NEHC personnel, and site visits to NEHC in Norfolk, Virginia and an aircraft carrier in San Diego, California.

A comprehensive overview of occupational and environmental health nursing, this book is AAOHN's statement of the scope of practice for this nursing specialty. It represents the latest body of knowledge significant to this field. Written in an outline format, it can be used as a textbook for an occupational and environmental health nursing course, as a clinical reference in a variety of occupational settings, and as a certification review tool. This new edition is based on recent revisions to the AAOHN's Code of Ethics and Standards of Practice. Written by experts in the field of occupational health nursing. Consistent outline format allows ease of access to information. Addresses the foundational sciences of occupational health: epidemiology, toxicology,

industrial hygiene, ergonomics, and injury prevention to provide a comprehensive basis of knowledge. Incorporates trends in the legal, ethical, economic, political, and business climates as they relate to occupational and environmental health and safety, staying current with all areas that affect the occupational health nurse's roles and responsibilities. New chapter on disaster planning and management addresses responsibilities of occupational health nurses in hazard situations in both the workplace and in the larger community. The latest government initiatives and guidelines are covered, such as OSHA's Strategic Management Plan to reduce workplace fatalities, injuries, and illnesses, plus other new workplace-related government programs and legislation. Revised competencies of practice, with performance criteria, present the current practice expectations at each level of practice. Revised Code of Ethics is a guide for nurses to maintain and pursue professionally recognized ethical behavior in providing occupational and environmental health services. Occupational Health: A Guide to Sources of Information is a compilation of papers that can be used as reference when seeking information and knowledge

related to health hazards found in the workplace. The information given in the book pertains mostly to the United Kingdom, though additional references can be helpful when used in other countries. The text enumerates the qualifications and trainings required for occupational physicians, medical officers, consultants, nurses, and part-time workers. The book also includes training courses in the USA, Australia, and South Africa. The epidemiological approach to occupational health hazards and problems, including the spread of community diseases in terms of age, social class, and time factors, is discussed. Of interest is the chapter on ergonomics where the interrelations between humans and their occupations are studied. Another useful chapter for administrators in the occupational health sector is the design of an occupational health department and first aid stations. Related topics include management, handling trade unions, and even environmental pollution. Details of occupational medicine in selected countries of the European Economic Community, the work of the WHO and the ILO, and other additional information from countries such as Israel, India, Sudan, and Zambia are included. This book is an informative reading for physicians, nurses, hygienists, ergonomists, biomedical engineers, and students and trainees in occupational medicine.

The workplace is where 156 million working adults in the United States spend many waking hours, and it has a profound influence on health and well-being. Although some occupations and work-related activities are more hazardous than others and face higher

rates of injuries, illness, disease, and fatalities, workers in all occupations face some form of work-related safety and health concerns. Understanding those risks to prevent injury, illness, or even fatal incidents is an important function of society. Occupational safety and health (OSH) surveillance provides the data and analyses needed to understand the relationships between work and injuries and illnesses in order to improve worker safety and health and prevent work-related injuries and illnesses. Information about the circumstances in which workers are injured or made ill on the job and how these patterns change over time is essential to develop effective prevention programs and target future research. The nation needs a robust OSH surveillance system to provide this critical information for informing policy development, guiding educational and regulatory activities, developing safer technologies, and enabling research and prevention strategies that serves and protects all workers. A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century provides a comprehensive assessment of the state of OSH surveillance. This report is intended to be useful to federal and state agencies that have an interest in occupational safety and health, but may also be of interest broadly to employers, labor unions and other worker advocacy organizations, the workers' compensation insurance industry, as well as state epidemiologists, academic researchers, and the broader public health community. The recommendations address the strengths and weaknesses of the envisioned system relative to the status quo and both short- and long-term actions and strategies needed to bring about a progressive evolution of the current

system.

Preventing Occupational Disease and Injury National Academies Press

An outline format makes information easy to find and easy to follow!

Introduction to Occupational Health in Public Health Practice BoD – Books on Demand

"At the Point of Production", a compilation of contributions to "New Solutions Journal of Occupational and Environmental Health Policy", locates workers' health and safety problems in the broad political economy. It argues that without a deep understanding of the social/political/economic context of particular industries or workplaces, we cannot fully grasp the process of recognition and control of industrial hazards. The contributors report on a series of case studies, all of which used the 'point of production' framework to investigate particular problems or industries. The focus of the first section is on globalization, the impact of privatization on the health and safety of workers and communities in Brazil and Mexico. The next section addresses environmental issues: the unintended effects of environmental regulation on workers, the situation of hazardous waste workers and emergency

responders, the implementation of toxics use reduction, and the role of workers in pollution prevention. In the third section the contributors explore the intersection of labor relations with gender relations at the point of production. A final chapter deals with some of the practical issues involved in conducting occupational health research in the contested terrain of the workplace.

It continues on the health side beginning with chemical agents and ending with medical surveillance. The book also offers sections covering normal control practices, physical hazards, and management approaches (which focuses on legal issues and workers

compensation). Features new chapters on current developments like management systems, prevention by design, and statistics for safety and health. Written by a number of pioneers in the safety and health field. Offers fast overviews that enable individuals not formally trained in occupational safety to quickly get up to speed. Presents many chapters in a "how-to" format. Environmental health practitioners worldwide are frequently presented with issues that require further investigating and acting upon so that exposed populations can be protected from ill-health consequences. These environmental factors can be broadly classified according to their relation to air, water or food contamination. However, there are also work-related, occupational health exposures that need to be considered as a subset of this dynamic academic field. This book

presents a review of the current practice and emerging research in the three broadly defined domains, but also provides reference for new emerging technologies, health effects associated with particular exposures and environmental justice issues. The contributing authors themselves display a range of backgrounds and they present a developing as well as a developed world perspective. This book will assist environmental health professionals to develop best practice protocols for monitoring a range of environmental exposure scenarios.

Per- and polyfluorinated alkyl substances (PFAS), often referred to as per- (and poly) fluorinated compounds (PFCs), have been used for years in many everyday^{3/4} and some lifesaving^{3/4} products. However, their use has been linked to adverse health effects in humans, a problem compounded by their persistence in the environment. This book discusses the various challenges of PFAS in our environment today, including their historical use as well as their chemical and toxicological properties. It also presents robust discussion of analytical challenges and special considerations in sampling. The work goes on to give practical recommendations for dealing with these compounds in today's dynamic regulatory landscape and includes several chapters on various remediation techniques. Key Features:

Comprehensive overview of per- and polyfluorinated alkyl substances (PFAS) historical use and chemical/physical properties which help us understand their persistence, transport, and transformation pathways in the environment In-depth analysis of PFAS

toxicology Detailed descriptions of conventional and state-of-the-art remediation technologies Practical recommendations for dealing with PFAS in a dynamic regulatory landscape Robust discussion of important sampling and analytical considerations Perfluoroalkyl Substances in the Environment: Theory, Practice, and Innovation explores the challenges across the topical areas of regulation and management, toxicology, environmental remediation, and analytical sampling and analysis. Readers will find this text helpful in understanding complexities associated with PFAS and informing management strategies to effectively protect this and future generations.

Occupational and Environmental Health Documents both environmental and work-related causes of lung disease Unlike other books on the subject, this new volume approaches occupational and environmental lung disease from the starting point of the patient who comes to the physician with respiratory symptoms. The authors recognize that potentially harmful exposures occur not only in the work environment, but also as a result of hobbies or other leisure activities, or from outdoor air pollution, and it is up to the physician to identify whether a particular job or hobby is the cause of the patient's respiratory symptoms. To help you arrive at a

differential diagnosis, chapters in the book are arranged by job or exposure, and are divided into 5 sections: Personal environment Home environment Other indoor environments Work environment General environment Each is written by an expert in the specific topic and provides pragmatic information for the practicing physician. This practical book is an invaluable resource that belongs close at hand for all physicians dealing with patients experiencing respiratory symptoms.
