Jeffrey Frank Jones

These proceedings gather contributions presented at the 9th International Conference on Applied Operational Research (ICAOR 2017) in Taoyuan, Taiwan, December 18-20, 2017, published in the series Lecture Notes in Management Science (LNMS). The conference covers all aspects of Operational Research and Management Science (OR/MS) with a particular emphasis on applications.

**Part 6** Walter de Gruyter GmbH & Co KG

This issue of Veterinary Clinics: Small Animal Practice, guest edited by Drs. Maureen McMichael and Melissa Singletary, focuses on Working Dogs: An Update for Veterinarians. This issue is one of six issues published each year. Articles in this issue include, but are not limited to: Introduction to Working Dogs; Preventative Health Care and essential equipment needs; Anesthetic Considerations in Working Dogs; Dentistry for Working Dogs; Nutrition in Working Dogs; Current Rules and Regulations for Working Dogs; Canine Olfaction; Sports Medicine and Rehabilitation in Working Dogs; Herding and Sporting Dogs; Breeding Management and Production in Working Dogs; Development and Training for Working Dogs; Military Working Dogs; Operational Canines; and Assistance, Service, and Therapy Dogs.  
From Borneo to Lockerbie Springer

The casualty table was compiled by the Department of Defense, as tallied from DOD press releases. Table 1 provides statistics on fatalities during Operation Iraqi Freedom, which began on March 19, 2003, and is ongoing, as well as on the number of fatalities since May 1, 2003. Statistics may be revised as circumstances are investigated and as all records are processed through the U.S. military's casualty system. More frequent updates are available at DOD's Web site at

[<http://www.defenselink.mil/news/>]. Click on "OIF Casualty Update." A detailed casualty summary which includes data on deaths by cause, as well as statistics on soldiers wounded in action, is available at the following DOD Web site: [<http://siadapp.dmdc.osd.mil/personnel/CASUALTY/eatop.htm>].

### **Iraq: Summary of U.S. Casualties**

Jones & Bartlett Publishers

The Combat Medic of today is the most technically advanced ever produced by the United States Army. Such an advanced technician requires an advanced teaching and learning system. 68W Advanced Field Craft is the first textbook designed to prepare the Combat Medic for today's challenges in the field. The ability to save lives in war, conflicts, and humanitarian interventions requires a specific skill set. Today's Combat Medic must be an expert in emergency medical care, force health protection, limited primary care, evacuation, and warrior skills. 68W Advanced Field Craft combines complete medical content with dynamic features to support instructors and to prepare Combat Medics for their missions.

*It Took Heroes* John Wiley & Sons  
Will a dazzling kiss with his Cinderella be enough to convince her to stay forever? Find out what happens in this fairy-tale medical romance by Charlotte Hawkes. When midnight strikes... Will his Cinderella stay in his arms? Helicopter pilot Piper Green is supposed to be Dr. Lincoln Oakes's new air ambulance colleague—not his houseguest! Yet discovering she's practically homeless, he offers her his spare room. In such close quarters, sparks soon start to fly, but they agree to keep things strictly professional. Until a dazzling kiss makes their chemistry impossible to ignore... But Piper has a secret and when Linc learns the truth, could their chance at happy-ever-after disappear? From *Harlequin Medical: Life and love in the world of modern medicine.*

Healthcare Administration: Concepts, Methodologies, Tools, and Applications  
ORLAB Analytics

As information systems become ever more pervasive in an increasing number of fields and professions, workers in healthcare and medicine must take into consideration new advances in technologies and infrastructure that will better enable them to treat their patients and serve their communities. *Healthcare Administration: Concepts, Methodologies, Tools, and Applications* brings together recent research and case studies in the medical field to explore topics such as hospital management, delivery of patient care, and telemedicine, among others. With a focus on some of the most groundbreaking new developments as well as future trends and critical concerns, this three-volume reference source will be a significant tool for medical practitioners, hospital managers, IT administrators, and others

actively engaged in the healthcare field.

*The Tillman Fratricide* John Wiley & Sons  
The Intelligent Systems Series comprises titles that present state of the art knowledge and the latest advances in intelligent systems. Its scope includes theoretical studies, design methods, and real-world implementations and applications. *Service Science, Management, and Engineering* presents the latest issues and development in service science. Both theory and applications issues are covered in this book, which integrates a variety of disciplines, including engineering, management, and information systems. These topics are each related to service science from various perspectives, and the book is supported throughout by applications and case studies that showcase best practice and provide insight and guidelines to assist in building successful service systems. Presents the latest research on service science, management and engineering, from both theory and applications perspectives Includes coverage of applications in high-growth sectors, along with real-world frameworks and design techniques Applications and case studies showcase best practices and provide insights and guidelines to those building and managing service systems  
*Journal of Special Operations Medicine*  
Springer Nature

With the growing maturity of information and communication technologies, systems have been interconnected within growing networks, yielding new services through a combination of the system functionalities. This leads to an increasing complexity that has to be managed in order to take advantage of these system integrations. This book provides key answers as to how such systems of systems can be engineered and how their complexity can be mastered. After reviewing some definitions on systems of systems engineering, the book focuses on concrete applications and offers a survey of the activities and techniques that allow engineering of complex systems and systems of systems. Case studies, ranging from emergency situations such as Hurricane Katrina and its crisis management or a generic scenario of a major traffic accident and its emergency response, to the establishment of a scientific basis in the Antarctic region illustrate key factors of success and traps to avoid in order to cope with such situations.

*Shipboard Electronics Material Officer*  
Presidio Press

Considers war initiation, wartime politics, war policies and war termination through the complex roles played by citizen wartime casualties.

The soldiers in 1st Cav fought some of Vietnam's fiercest battles— and Chaplain Newby was there right beside them. For grunts in Vietnam, the war was a jungle hell of sudden death, endless suffering, and supreme courage. For Chaplain Newby, it was an honor to be chosen to share it with them. In enemy-held highlands and fetid jungles, Newby regularly accompanied patrols,

company-sized missions, chopper strikes, and air rescues—sharing the men's dreams, their fears, and their dying moments. Searing, brutally accurate, and dedicated to the truth, Claude Newby's account of brave men fighting a tragic war captures that time in all its horror and heroism. Newby doesn't shrink from exposing the war's darker side; his quiet description of the murderous events that came to be known as "the Mao incident" proves that justice can prevail. Ultimately, Newby's riveting stories reveal the tremendous valor and sacrifices of ordinary Americans facing constant danger, shattering losses, and an increasingly indifferent nation. His book is a shining tribute to those who fought, those who died, and those who came home to a country determined to forget them.

Military Requirements for Petty Officer Third Class Cambridge University Press  
"The United States of America and Canada"; beginning with 1983, Western Europe also covered, in vols. 4-5;

**Antitrust Exemption Contained in McCarran-Ferguson Act** CRC Press  
On 24 February 2022, Russia invaded Ukraine in a major escalation of the Russo-Ukrainian War, which began in 2014. Following the 2014 Ukrainian Revolution, Russia annexed Crimea, and Russian-backed paramilitaries seized part of the Donbas region of south-eastern Ukraine, which consists of Lugansk and Donetsk oblasts, sparking a regional war. In March 2021, Russia began a large military build-up along its border with Ukraine, eventually amassing up to 190,000 troops and their equipment. Despite the build-up, denials of plans to invade or attack Ukraine were issued by various Russian government officials up to the day before the invasion. On 21 February 2022, Russia

recognized the Donetsk People's Republic and the Lugansk People's Republic, two self-proclaimed breakaway quasi-states in the Donbas. The next day, the Federation Council of Russia authorized the use of military force and Russian troops entered both territories. This book tries to shed light on the causes which led to this war. It presents arguments of both sides carried through the words of presidents Putin and Zelenskyy. This edition includes as well the book about the historical background of the conflict and the military actions during the war. Content: The Speeches and Decisions of Vladimir Putin The Speeches and Decisions of Volodymyr Zelenskyy The Consequence: Russo-Ukrainian War

*His Cinderella Houseguest* Delene

Kvasnicka [www.survivablebooks.com](http://www.survivablebooks.com)

The second edition of this book describes the clinical indications of NIV in patients hospitalized with high-risk infections as well as in the prehospital management of mass casualty incidents, including chemical or biological disasters and pandemics. In recent decades, we have learned the impact that different pandemics and mass casualty disasters can outcome in terms of health resource use, health costs and human lives. The development of respiratory failure in these patients, either infectious or non-infectious causes, has led to develop employment plans related both to invasive or noninvasive mechanical ventilation during acute respiratory failure. In this book authors evaluate a rational basis for indications, specific noninvasive mechanical ventilation indications in hospitalized patients (tuberculosis, bacterial, virus, etc.) and prehospital applications (mass casualty: chemical, biological disaster), equipment (ventilators, interfaces) and plan

organization for health systems: how and when apply NIV. A critical review of already published studies is described as well as implications and how will be the future according to international expert opinions. Therefore, this updated edition represents a useful scientific reference point according to what it has been experienced in the last pandemics, with respect to the growing role that NIV has and must have in the world.

Language and style of epigram is a topic scarcely discussed in the related bibliography. This edition aspires to fill the gap by offering an in-depth study of dialect, diction, and style in Greek literary and inscribed epigram in a collection of twenty-one contributions authored by international scholars. The authors explore the epigrammatic *Kunstsprache* and matters of dialectical variation, the interchange between poetic and colloquial vocabulary, the employment of hapax legomena, the formalistic uses of the epigrammatic discourse (meter, syntactical patterns, arrangement of words, riddles), the various categories of style in sepulchral, philosophical and pastoral contexts of literary epigrams, and the idiosyncratic diction of inscriptions. This is a book intended for classicists who want to review the connection between the stylistic features of epigram and its interpretation, as well as for scholars keen to understand how rhetoric and linguistics can be used as a heuristic tool for the study of literature.

**Large-scale Complex System and Systems of Systems** Academic Press Geoff Leeming belongs to an elite group of helicopter pilots. He describes his

flying experiences in under-powered, and by today's high-tech standards, basic choppers such as the single-engine Whirlwinds and its successor, the Wessex, whether in turbulent tropical conditions, windswept mountains or low level over raging seas. Much of Geoff's flying career was in Search and Rescue (SAR) calling for the highest flying skills and the coolest of nerves. It fell to the pilot to make life-and-death decisions for both their crews and those they were rescuing. In addition to many great SAR accounts, this book begins with accounts of action in Borneo in the 1960s and ends with Geoff's fascinating account of his flying involvement in the aftermath of the Pan Am Lockerbie disaster. The result is a medley of cockpit experiences of par excellence.

Applied Operational Research DigiCat  
 Mass Casualty events may occur as a result of natural or human-caused disasters or after an act of terrorism. The planning and response to disasters and catastrophes needs to take into consideration the distinction between progressive and sudden events. Insidious or slowly progressive disasters produce a large number of victims but over a prolonged time period, with different peaks in the severity of patients presenting to the hospital. For example, radiation events will produce a large number of victims who will present days, weeks, months, or years after exposure, depending on the dose of radiation received. The spread of a biological agent or a pandemic will produce an extremely high number of victims who will present to hospitals during days to weeks after the initial event, depending on the agent and progression of symptoms. On the other hand, in a sudden disaster, there is an abrupt surge of victims resulting from an event such

as an explosion or a chemical release. After the sarin gas attack in a Tokyo subway in 1995, a total of 5500 victims were injured and required medical attention at local hospitals immediately after the attack. The car bomb that exploded near the American Embassy in Nairobi, Kenya, killed 213 people and simultaneously produced 4044 injured patients, many requiring medical care at local hospitals. The Madrid train bombing in March 2004 produced more than 2000 injured victims in minutes, overwhelming the city's healthcare facilities. More than 500 injured patients were treated at local hospital after the mass shooting in Las Vegas. Finally, earthquakes may produce a large number of victims in areas in which the medical facilities are partially or completely destroyed. Sudden events bring an immediate operational challenge to community healthcare systems, many of which are already operating at or above capacity. The pre-hospital as well as hospital planning and response to sudden mass casualty incidents (SMCI's) is extremely challenging and requires a standard and protocol driven approach. Many textbooks have been published on Disaster Medicine; although they may serve as an excellent reference, they do not provide a rapid, practical approach for management of SMCI's. The first edition of "Mass Casualty Incidents: The Nuts and Bolts of Preparedness and Response for Acute Disasters" dealt exclusively with sudden mass casualty incidents. The second edition will expand its focus and include planning and response for insidious and protracted disasters as well. This new book is designed to provide a practical and operational approach to planning, response and medical management of sudden as well as slow progressive

events. The target audience of the second edition will be health care professionals and institutions, as well as allied organizations, which respond to disasters and mass casualty incidents. Parts I and II are essentially the first edition of the book and consist of planning of personnel, logistic support, transport of patients and equipment and response algorithms. These 2 parts will be revised and updated and include lessons learned from major mass shootings that occurred recently in the United States and other parts of the world Part III will describe the planning process for progressive disasters and include response algorithms and checklists. Part IV will handle humanitarian and mental health problems commonly encountered in disaster areas. Part V will deal with team work and communication both critical topics when handling catastrophes and mass casualty incidents. This new book will be a comprehensive tool for healthcare professionals and managers and should perform demonstrably better in sales and downloads. It will be of value at the pre-hospital as well as the hospital level, to plan and respond to the majority of catastrophes and mass casualty incidents.

In recent years, there have been many advances in the safe management of the patient's airway, a cornerstone of anesthetic practice. An Update on Airway Management brings forth information about new approaches in airway management in many clinical settings. This volume analyzes and explains new preoperative diagnostic methods, algorithms, intubation devices, extubation procedures, novelties in postoperative management in resuscitation and intensive care units, while providing a simple, accessible and applicable reading experience that helps medical practitioners in daily practice. The comprehensive updates presented in this volume make this a useful reference for anesthesiologists, surgeons and EMTs at all levels. Key topics reviewed in this reference include: · New airway devices, clinical management techniques, pharmacology updates (ASA

guidelines, DAS algorithms, Vortex approach, etc.), · Induced and awake approaches in different settings · Updates on diagnostic accuracy of perioperative radiology and ultrasonography · Airway management in different settings (nonoperating room locations and emergency rooms) · Airway management in specific patient groups (for example, patients suffering from morbid obesity, obstetric patients and critical patients) · Algorithms and

traditional surgical techniques that include emergency cricothyrotomy and tracheostomy in 'Cannot Intubate, Cannot Ventilate' scenarios. · Learning techniques to manage airways correctly, focusing on the combination of knowledge, technical abilities, decision making, communication skills and leadership · Special topics such as difficult airway management registry, organization, documentation, dissemination of critical information, big data and databases
