Embedded Systems Design using the Rabbit 3000 Microprocessor
 CRC Press

Embedded software is in almost every electronic device in use today. There is software hidden away inside our watches, DVD players, mobile phones, antilock brakes, and even a few toasters. The military uses embedded software to guide missiles, detect enemy aircraft, and pilot UAVs. Communication satellites, deep-space probes, and many medical instruments would've been nearly impossible to create without it. Someone has to write all that software, and there are tens of thousands of electrical engineers, computer scientists, and other professionals who actually do.
