Travels in Abyssinia and the Galla Country Routledge

Waterfronts Revisited addresses the historical evolution of the relationship between port and city and re-examines waterfront development by looking at the urban territory and historical city in their complexity and entirety. By identifying guiding values, urban patterns and typologies, and local needs and experiences, cities can break the isolation of the harbor by reconnecting it to the urban structure; its functions, spaces and forms. Using the UNESCO recommendation for the "Historic Urban Landscape" as the guiding concept and a tool for managing urban preservation and change, this collection of essays illustrates solutions to issues of globalisation, commercialization of space and commoditisation of culture in waterfront development. Through sixteen selected case studies, Editors Heleni Porfyriou and Marichela Sepe offer planners and urban designers a broad spectrum of alternative solutions to waterfront regeneration interventions and redevelopments, addressing sustainability, regional cultural diversity, and the debate between conservation and transformation.

Planning for Crime Prevention Boydell & Brewer Ltd

Spatial planning has a vital role to play in the move to a low carbon energy future and in adapting to climate change. To do this, spatial planning must develop and implement new approaches. Elizabeth Wilson and Jake Piper explore a wide range of issues in this comprehensive book on the relationship between our changing climate and spatial planning, and suggest ways of addressing the challenges by taking a longer-sighted approach to our preparation for the future. This text includes: an overview of what we know already about future climate change and its impacts, as we attempt both to adapt to these changes and to reduce the emissions which cause them the role of spatial planning in relation to climate change, offering some theoretical and political explanations for the challenges that planning faces in the coming decades a review of policy and legislation at

international, EU and UK levels in regard to climate change, and the support this gives to the planning system case studies detailing what responses the UK and the Netherlands have made so far in light of the evidence ways to help new and existing urban developments to reduce energy use and to adapt to climate change, through strengthening the relationships between urban and rural areas to avoid water shortage, floods or loss of biodiversity. The authors take an evidence-based look at this hugely important topic, providing a well-illustrated text for spatial planning professionals, politicians and the interested public, as well as a useful reference for postgraduate planning, geography, urban studies, urban design and environmental studies students. *Experiences in City-building* Taylor & Francis

Waterfront regeneration and development represents a unique opportunity to spatially and visually alter cities worldwide. However, its multi-faceted nature entails city-building with all its complexity including the full range of organizations involved and how they interact. This book examines how more inclusive stakeholder involvement has been attempted in the nine cities that took part in the European Union funded Waterfront Communities Project. It focuses on analyzing the experience of creating new public realms through city-building activities. These public realms include negotiation arenas in which different discourses meet and are created – including those of planners, urban designers and architects, politicians, developers, landowners and community groups – as well as physical environments where the new city districts' public life can take place, drawing lessons for waterfront regeneration worldwide. The book opens with an introduction to waterfront regeneration and then provides a framework for analyzing and comparing waterfront redevelopments, which is followed by individual case study chapters highlighting specific topics and issues including land ownership and control, decision making in planning processes, the role of planners in public space planning, visions for waterfront living, citizen participation, design-based waterfront developments, a social approach to urban waterfront regeneration and successful place making. Significant findings include the difficulty of integrating long term 'sustainability' into

plans and the realization that climate change adaptation needs to be explicitly integrated into regeneration planning. The transferable insights and ideas in this book are ideal for practising and student urban planners and designers working on developing plans for long-term sustainable waterfront regeneration anywhere in the world.

The Philosophy of Natural Magic Routledge

This report explores the potential for mitigating the impacts of climate change by improved management and protection of marine ecosystems and especially the vegetated coastal habitat, or blue carbon sinks. The objective of this report is to highlight the critical role of the oceans and ocean ecosystems in maintaining our climate and in assisting policy makers to mainstream an oceans agenda into national and international climate change initiatives. While emissions' reductions are currently at the center of the climate change discussions, the critical role of the oceans and ocean ecosystems has been vastly overlooked.--Publisher's description.

The Curse of the Caribbean and the Three Guianas (Gehennas) Taylor & Francis

This book gives guidance as to the types of building stock offering greatest potential for conversion, that are likely to be viable and sustainable. Chapters are contributed by key experts in the field.

The Architecture of the City Butterworth-Heinemann

Essays dealing with the question of how "sense of place" is constructed, in a variety of locations and media.

Industrial Buildings MIT Press

This book provides an in-depth analysis of the role of property investment and development in the urban regeneration process. It relates the physical, economic, financial and environmental aspects of urban change and development to the realities of particular cities by case studies drawn from Britain and Europe. *Integrated Planning for a Sustainable Environment* Routledge While Homes, Cities and Neighbourhoods provides a unique and comprehensive exploration of housing and planning from 1900 through to the present, it is more than a history of ideas and debates. Drawn from an eclectically wide range of information sources, it puts forward a lively and readable account of the

changing urban landscapes of modern Britain.

Conservation and Regeneration Routledge

Exploring the streets of London, Manchester, Belfast, Edinburgh or Cardiff, one cannot help but notice the striking transformations taking place in the urban landscapes. This prominent regeneration of urban areas in the UK and around the world has become an increasingly important issue amongst governments and populations. The growing concern has been a result of the impacts of the decline of cities since the collapse of manufacturing industries and the heightening of global competition. A range of innovative approaches to tackle urban problems have been taken over many decades to attempt to regenerate the fortunes of towns and cities across the UK. This text provides an accessible, yet critical, synthesis of urban regeneration in the UK incorporating key policies, approaches, issues and debates. The central objective of the book is to place the historical and contemporary regeneration agenda into context. Section one sets up the conceptual and policy framework for urban regeneration in the UK. SectionTwo traces policies that have been adopted by central government to influence the social, economic and physical development of cities, including early municipal interventions in the late nineteenth century, community-focused urban policies of the late 1960s, entrepreneurial property-led regeneration of the 1980s and competition for urban funds in the 1990s. The penultimate section illustrates the key thematic policies and strategies that have been pursued by cities themselves, focusing particularly on improving economic competitiveness and tackling social disadvantage. These approaches are contextualized by discussions covering, for example, urban competitiveness policies and the focus on sustainable urban regeneration. The final section summarizes key issues and debates facing urban regeneration, and speculates upon future directions. Urban Regeneration in the UK blends the approaches taken by central government programmes and cities themselves in the regeneration process. The latest ideas and examples from across disciplines and across the UK's urban areas are illustrated. This book provides a comprehensive and up-to-date synthesis that will fill a significant gap in the current literature on regeneration and will be a tool for students as well as a seminal read for practitioners and researchers.

Press

Book Award Finalist for Urban Design Group Awards 2020 Human settlements are the result of a mix of self-organisation and planning. Planners are fighting a losing battle to impose order on chaotic systems. Connections between the process of urban growth and the fields of complexity theory are of increasing importance to planners and urbanists alike; the idea that cities are emergent structures created not by design but from the interplay of relatively simple rules and forces over time. From the small Tuscan hill town to the megacities of Asia: the struggle between the planned and the unplanned is universal. Based on years of international research, *Climax City* is a critical exploration of the growth of cities and masterplanning. Challenging the idea that the city can be entirely planned on paper, this book implores you to work with chaos when planning cities. Beautifully illustrated with striking hand-drawn plans of global cities, this is a vital and accessible contribution to urban theory and planning. It's the perfect title for practitioners and academics across planning and urban design looking to make sense out of chaos.

Waterfronts Revisited European ports in a historic and global perspective Routledge

Cassino to the Alps Routledge

This is the first ever "root dictionary" of Korean designed for second-language learners. Useful for students at all levels, it contains more than 1,500 vocabulary lists consisting of words built from a shared root. These lists offer a unique and efficient way for students to acquire new words. Upon encountering a word, students can consult the lists for its component roots and discover many other semantically related words built from the same elements.

Multidisciplinary Perspectives Altralea Edizioni

neurons and their metaphysical side-effects: from a rigorous discussion of the properties of neurons and brain to the mechanisms by which this grayish jelly generates and explains emotional life, conscience, thought, our sense of beauty and justice, our need for infinity and almost all that we love calling "soul"... the book can be browsed at <http://www.neuroworld.it/soul>

Masterplanning and the Complexity of Urban Growth Routledge

This study has been designed to examine thoroughly the

implications of waterside regeneration and redevelopment in urban settings. It discusses waterside development projects from the perspectives of architects and urban planners, engineers and conservation and environmental managers.

Public Open Space in Transition for health and well-being

UNEP/Earthprint

Which open spaces and combinations of green-blue infrastructure provide optimum wellbeing benefits? How we do ensure these benefits are available to all? Can we reduce health and well-being inequalities through sensible design? The volume focuses on specific studies in urban design, environmental psychology and public health combining 'green' spaces with 'green-blue' infrastructures, active mobility and facilities, showing a series of criteria necessary to ensure that 'green-blue' space can work optimally. The book is divided in two parts: Part one goes on to demonstrate how design along waterfronts can contribute to support the well-being of people and encourage urban quality. Part two identifies design concepts for health and well-being in urban spaces.

British Towns and the Quality of Life ... Annual Conference

*Belhaven Press

Based on analysis of the Manchester city-region, this book offers a vision of a sustainable urban future, through integrated strategic management of the entire city-region. It translates principles into practice for achieving the necessary balance to ensure a higher standard of living and safe environment. The text presents: a 25-year horizon for the evolution and restructuring of the urban system; a focus for linkages and synergies between economic, social and environmental sectors; technical scenarios for land use, energy and material flows; spatial scenarios for each area and settlement type; and lateral thinking on cultural, information, localization and globalization trends. Also included are practical actions, methods and tools such as sustainability indicators and appraisals that can be applied anywhere in the western world.

A Transatlantic Perspective Routledge

There is a growing evidence base that documents the social, environmental and economic benefits that urban trees can deliver. Trees are, however, under threat today as never before due to competition for space imposed by development, other hard infrastructures, increased pressure on the availability of financial provision from local authorities and a highly cautious approach to

risk management in a modern litigious society. It is, therefore, incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can, but also ensure that new plantings are appropriately specified and detailed to enable their successful establishment and growth to productive maturity. Aimed at developers, urban planners, urban designers, landscape architects and arboriculturists, this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities. It takes a simple, applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision-making in terms of tree selection, specification, placement and establishment. In this way, trees can successfully be incorporated within our urban landscapes, so that we can continue to reap the benefits they provide.

Niles' Weekly Register Routledge

Crime and the fear of crime are issues high in public concern and on political agendas in most developed countries. This book takes these issues and relates them to the contribution that urban planners and participative planning processes can make in

response to these problems. Its focus is thus on the extent to which crime opportunities can be prevented or reduced through the design, planning and management of the built environment. The perspective of the book is transatlantic and comparative, not only because ideas and inspiration in this and many other fields increasingly move between countries but also because there is a great deal of relevant theoretical material and practice in both the USA and the UK which has not previously been pulled together in this systemic manner.

Social reproduction of everyday life Routledge

This report examines four inner neighbourhoods in two northern cities that suffer from low demand, incipient abandonment and severe depopulation. It attempts to uncover the causes of abandonment, describe the struggle of those living through the experience and assess attempted remedies.

The Chinese Recorder Ashgate Publishing, Ltd.

Contemporary urbanisation has two faces: global flows of people, money and information, and that of localised social and economic disparities. Recent research has focused on the headlines of global cities as control centres of the world economy, and social

and economic shock waves that have raged through cities and regions, but less attention has been paid to the secret life of cities, and the changing nature of everyday life in the wake of such changes. This book challenges current research and policy agendas recommending spatial concentration and relocation as a solution to the problems of environmental sustainability and social dislocation. Instead, this book highlights the key linkages between social and environmental problems, it argues that neither are likely to be resolved with a simple spatial fix. The book draws attention to local contexts of contemporary urbanisation emphasising consideration of policy making from the perspective of the household as a key unit of analysis in identifying links between labour and housing markets, transport and leisure. This book draws upon detailed household interviews about the daily experience of life in a global city. It illustrates the dilemmas and solutions that people routinely find in order to go on in their lives. It shows that these local fixes that are managed at the level of the household work in spite of, and sometimes against, existing policies aimed at sustainability. It concludes that policy making needs to be radically overhauled in order to address the integrated nature of people's everyday lives.
