Lecture Notes: O Level Biology PDF Book (IGCSE/GCSE Biology eBook Download)

Book (Grade 9 Biology eBook Download) This book treats a new, far-from-fully-developed area of molecular biophysics-enzyme physics. An attempt is made to survey this field, but primary consideration is given to three problems under investigation in the Polymer Structure Laboratory of the Institute of High-Molecular Compounds, Academy of Sciences of the USSR. The first problem is the genetic coding of the biologically functional structure of proteins. Its solution is based on physical theories of hydrophobic interactions. The second problem is the conformational properties of proteins as the factor governing enzyme activity. The most direct methods for experimental investigation of questions in this area are optical, principally those involving natural and magnetic rotation of the plane of polarization. A substantial portion of the book concerns optical activity; the Faraday effect is discussed in an appendix. The third problem is the manifestation of the cooperative properties of enzymes in the kinetics of enzymatic reactions and the solution of complex kinetic problems. This problem

is especially pressing in connection with research on allosteric enzymes, which are responsible for feedback in metabolic processes. An appendix describes a new method for solving kinetic problems, based on the theory of graphs. This volume extends and details certain of the ideas expressed in my previous book, *Molecules and Life: An Introduction to Molecular Biophysics*, which was published in this series in 1965.

Why is eating food in its natural state, unprocessed and unrefined, so vital to the maintenance of good health? What is lacking in our modern diet that makes us so susceptible to degenerative disease? What natural elements in food may play a key role in unlocking the secrets of life extension? These fascinating questions, and many more, are answered in *Enzyme Nutrition*. Written by one of America's pioneering biochemists and nutrition researchers, Dr. Edward Howell, *Enzyme Nutrition* presents the most vital nutritional discovery since that of vitamins and minerals—food enzymes. Our digestive organs produce some enzymes internally, however food enzymes are necessary for optimal health and must come from uncooked foods such as fresh fruits and vegetables, raw sprouted grains, unpasteurized dairy products, and food enzyme supplements. *Enzyme Nutrition* represents more than fifty years of research and experimentation by Dr. Howell. He shows us how to conserve our enzymes and maintain internal balance. As the body regains its strength and vigor, its capacity to maintain its normal weight, fight disease, and heal itself is enhanced.
