Federal Register Department of Defense (Dod) Cloud Computing Security Requirements Guide (Srg)

Provides a framework that the Department of Defense (DoD) can use to organize the strategic initiatives outlined in its 2012 Diversity and Inclusion Strategic Plan. The framework emphasizes the creation of an enduring accountability system and categorizes DoD's strategic initiatives along three key dimensions--compliance, communication, and coordination ("the three Cs")--and prioritizes them across time--short, medium, and long term.

Cloud computing technology and services provide the Department of Defense (DoD) with the opportunity to deploy an Enterprise Cloud Environment aligned with Federal Department-wide Information Technology (IT) strategies and efficiency initiatives, including federal data center consolidation. Cloud computing enables the Department to consolidate infrastructure, leverage commodity IT functions, and eliminate functional redundancies while improving continuity of operations. The overall success of these initiatives depends upon well executed security requirements, defined and understood by both DoD Components and industry. Consistent implementation and operation of these requirements assures mission execution, provides sensitive data protection, increases mission effectiveness, and ultimately results in the outcomes and

operational efficiencies the DoD seeks. The 15 December 2014 DoD CIO memo regarding Updated Guidance on the Acquisition and Use of Commercial Cloud Computing Services defines DoD Component responsibilities when acquiring commercial cloud services. The memo allows components to responsibly acquire cloud services minimally in accordance with the security requirements outlined in Federal Risk and Authorization Management Program (FedRAMP) FedRAMP and this Security Requirement Guide (SRG). DISA previously published the concepts for operating in the commercial cloud under the Cloud Security Model. Version 1 defined the overall framework and provided initial guidance for public data. Version 2.1 added information for Controlled Unclassified Information. This document, the Cloud Computing Security Requirements Guide (SRG), documents cloud security requirements in a construct similar to other SRGs published by DISA for the DoD. This SRG incorporates, supersedes, and rescinds the previously published Cloud Security Model.

The Nat. Inst. of Standards and Tech. (NIST) defines cloud computing as a model for enabling convenient, on-demand network access to a shared pool of computing resources, such as networks and servers that can be quickly engaged with minimal management effort or service provider interaction. In Dec. 2010, the Federal Chief Info. Officer (CIO) required the Federal Government to shift to a "Cloud First" policy. In July 2012, the Department of Defense (DOD) CIO issued the DOD Cloud Computing Strategy to accelerate the DOD adoption of cloud computing and take advantage of its benefits. The strategy provides elements intended to foster adoption of cloud computing and establish a DOD cloud infrastructure. The objective of this report was to determine whether DOD effectively planned and executed a strategy for implementing cloud computing. Tables. This is a print on demand report.

The global shift toward delivering services online requires organizations to evolve from using traditional paper files and storage to more modern electronic methods. There has however been very little information on just how to navigate this change-until now. Implementing Electronic Document and Record Management Systems explains how to efficiently store and access electronic documents and records in a manner that allows quick and efficient access to information so an organization may meet the needs of its clients. The book addresses a host of issues related to electronic document and records management systems (EDRMS). From starting the project to systems administration, it details every aspect in relation to implementation and management processes. The text also explains managing cultural changes and business process re-engineering that organizations undergo as they switch from paper-based records to electronic documents. It offers case studies that examine how various organizations across the globe have implemented EDRMS. While the task of creating and employing an EDRMS may seem daunting at best, Implementing Electronic Document and Record Management Systems is the

resource that can provide you with the direction and guidance you need to make the transition as seamless as possible.

DCAA Contract Audit Manual DIANE Publishing

For the last several years, Congress and others have been concerned about declines in the Internal Revenue Service's (IRS) compliance and collection programs. Many view these programs-such as audits to determine whether taxpayers have accurately reported the amount of taxes that they owe and collection follow-up with taxpayers who have not paid what is owed-as critical for maintaining the public's confidence in our tax system. Taxpayers' willingness to voluntarily comply with the tax laws depends in part on their confidence that their friends, neighbors, and business competitors are paying their share of taxes. As we previously reported, some declines in compliance and collection programs have been dramatic. 1 For example, from fiscal year 1996 to fiscal year 2000, the number of individual tax returns audited by IRS declined by over 60 percent. Furthermore, IRS was unable to pursue many delinquent taxpayers, deferring collection action on billions of dollars in unpaid taxes.

FORCENet is currently defined as the operational construct and architectural framework for naval warfare in the information age that integrates warriors, sensors, networks, command and control, platforms, and weapons into a networked, distributed, combat force that is scalable across all levels of conflict from seabed to space and sea to land. Although this definition views FORCENet as the operational construct and the architectural framework for the entire transformed Navy, some have viewed FORCENet merely as an information network and the associated FORCENet architecture merely as an information systems architecture. FORCENet Implementation Strategy provides advice regarding both the adequacy of this definition and the actions required to implement FORCENet.
