Except in a few instances, since World War II no American soldier or sailor has been attacked by enemy air power. Conversely, no enemy soldier or sailor has acted in combat without being attached or at least threatened by American air power. Aviators have brought the air weapon to bear against enemies while denying them the same prerogative. This is the legacy of the U.S. Air Force, purchased at great cost in both human and material resources. More often than not, aerial pioneers had to fight technological ignorance, bureaucratic opposition, public apathy, and disagreement over purpose. Every step in the evolution of air power led into new and untrodden territory, driven by humanitarian impulses; by the search for higher, faster, and farther flight; or by the conviction that the air was the best way. Warriors have always coveted the high ground.

If technology permitted them to reach it, men, women, and an air force held and exploited it – from Thomas Selfridge, first among so many who gave that “last full measure of devotion”; to “Women’s Airforce Service Pilot Ann Baumgartner, who broke social barriers to become the first American woman to pilot a jet; to Benjamin Davis, who broke racial barriers to become the first African American to command a flying group; to Chuck Yeager, a one-time non-commissioned flight officer who was the first to exceed the speed of sound; to John Levitow, who earned the Medal of Honor by throwing himself over a live flare to save his gunship crew; to John Warden, who began a revolution in air power thought and strategy that was put to spectacular use in the Gulf War. Industrialization has brought total war and air power has brought the means to overfly an enemy’s defenses and attack its sources of power directly. Americans have perceived air power from the start as a more efficient means of waging war and as a symbol of the nation’s commitment

to technology to master challenges, minimize casualties, and defeat adversaries. This eight-two page book concludes that “future conflicts will bring new challenges for air power in the service of the nation.”

Volume 5, Deep Maneuver: Historical Case Studies of Maneuver in Large-Scale Combat Operations, presents eleven case studies from World War II through Operation Iraqi Freedom focusing on deep maneuver in terms of time, space and purpose. Deep operations require boldness and audacity, and yet carry an element of risk of overextension – especially in light of the independent factors of geography and weather that are ever-present. As a result, the case studies address not only successes, but also failure and shortfalls that result when conducting deep operations. The final two chapters address these considerations for future Deep Maneuver.

Did Nazi war criminals

deceive the United States military during the Cold War? A new book by a Canberra-based historian tells the story of how America's most famous and influential military theorist was seduced by the lies of Hitler's defeated generals. From the author of *Panzer Commander Hermann Balck and False Flags* comes *The Blind Strategist: John Boyd and the American Art of War*. Colonel John Boyd, a maverick fighter pilot, revolutionized the American art of war through his ideas on conflict and the human mind. Boyd claimed that victory is won by the side which transitions through 'decision cycles' faster than the enemy and his ideas gained influential converts in the Pentagon who were seeking a new way of waging war after defeat in Vietnam. Although Boyd's theories became the basis of American military doctrine, he relied upon the fraudulent testimony of former Nazi generals who fabricated historical evidence to disassociate their reputations from their defeat and cover up their willing participation in war crimes. Boyd certainly changed the American art of war, but

did he corrupt it in the process? *The Blind Strategist* separates fact from fantasy and exposes the myths of maneuver warfare through a detailed evidence-based investigation. Discover how maneuver warfare has resulted in catastrophic decisions in this must-read for anybody interested in American military history. **Kevlar Legions** Military Bookshop

 This two-volume handbook presents a collection of novel methodologies with applications and illustrative examples in the areas of data-driven computational social sciences. Throughout this handbook, the focus is kept specifically on business and consumer-oriented applications with interesting sections ranging from clustering and network analysis, meta-analytics, memetic algorithms, machine learning, recommender systems methodologies, parallel pattern mining and data mining to

specific applications in market segmentation, travel, fashion or entertainment analytics. A must-read for anyone in data-analytics, marketing, behavior modelling and computational social science, interested in the latest applications of new computer science methodologies. The chapters are contributed by leading experts in the associated fields. The chapters cover technical aspects at different levels, some of which are introductory and could be used for teaching. Some chapters aim at building a common understanding of the methodologies and recent application areas including the introduction of new theoretical results in the complexity of core problems. Business and marketing professionals may use the book to familiarize themselves with some important foundations of data science. The work is a good starting point to establish an open dialogue of communication between professionals and researchers from different fields. Together, the two volumes present a number of different new directions in Business and Customer Analytics with an emphasis in

personalization of services, the development of new mathematical models and new algorithms, heuristics and metaheuristics applied to the challenging problems in the field. Sections of the book have introductory material to more specific and advanced themes in some of the chapters, allowing the volumes to be used as an advanced textbook. Clustering, Proximity Graphs, Pattern Mining, Frequent Itemset Mining, Feature Engineering, Network and Community Detection, Network-based Recommending Systems and Visualization, are some of the topics in the first volume. Techniques on Memetic Algorithms and their applications to Business Analytics and Data Science are surveyed in the second volume; applications in Team Orienteering, Competitive Facility-location, and Visualization of Products and Consumers are also discussed. The second volume also includes an introduction to Meta-Analytics, and to the application areas of Fashion and Travel Analytics. Overall, the two-volume set helps to describe some fundamentals, acts as a

bridge between different disciplines, and presents important results in a rapidly moving field combining powerful optimization techniques allied to new mathematical models critical for personalization of services. Academics and professionals working in the area of business analytics, data science, operations research and marketing will find this handbook valuable as a reference. Students studying these fields will find this handbook useful and helpful as a secondary textbook. *Strategies in Failure Management* Zed Books Militainment, Inc. offers provocative, sometimes disturbing insight into the ways that war is presented and viewed as entertainment—or "militainment"—in contemporary American popular culture. War has been the subject of entertainment for centuries, but Roger Stahl argues that a new interactive mode of militarized entertainment is recruiting its audience as virtual-citizen soldiers. The author examines a wide range of historical and contemporary media examples to demonstrate the ways that war now invites audiences to enter

the spectacle as an interactive participant through a variety of channels—from news coverage to online video games to reality television. Simply put, rather than presenting war as something to be watched, the new interactive militainment presents war as something to be played and experienced vicariously. Stahl examines the challenges that this new mode of militarized entertainment poses for democracy, and explores the controversies and resistant practices that it has inspired. This volume is essential reading for anyone interested in the relationship between war and media, and it sheds surprising light on the connections between virtual battlefields and the international conflicts unfolding in Iraq and Afghanistan today. *GIScience for Intelligent Services* Naval Inst Press Includes more than 100 maps, plans and illustrations. "This monograph is more than the story of Marine expeditionary operations in Afghanistan. It describes who our nation's enemies are; how America became involved in the Global War on

Terrorism; and how the Marine Corps struggled to acquire a major role in Operation Enduring Freedom, as well as the actions of Marines and sailors who helped prosecute the air and ground campaigns against Taliban and al-Qaeda forces.”— Dr. Charles P. Neimeyer, Director of Marine Corps History *Maclean's* Cambridge University Press Full colour illustrations throughout. Center of Military History publication CMH 70-118-1. Describes the achievement from 1989 through 2005 of the United States Army of a centrally directed and institutionally driven transformation relevant to ground warfare that exploited Information Age technology, adapted to post-Cold War strategic circumstances, and integrated into parallel Department of Defense efforts. Combines participant observation with solid scholarship. Explains what happened in the transformation of the Army over the past twenty years, why it happened, and who was involved. Presents the hard choices, accepted risks, processes of decision making and institutional results.

From the bestselling author of *The Day of the Jackal*, international master of intrigue Frederick Forsyth, comes a thriller that brilliantly blends fact with fiction for one of this summer's—or any season's—most explosive reads! From the behind-the-scenes decision-making of the Allies to the secret meetings of Saddam Hussein's war cabinet, from the brave American fliers running their dangerous missions over Iraq to the heroic young

spy planted deep in the heart of Baghdad, Forsyth's incomparable storytelling skill keeps the suspense at a breakneck pace. Somewhere in Baghdad is the mysterious “Jericho,” the traitor who is willing—for a price—to reveal what is going on in the high councils of the Iraqi dictator. But Saddam's ultimate weapon has been kept secret even from his most trusted advisers, and the nightmare scenario that haunts General Schwarzkopf and his colleagues is suddenly imminent, unless somehow, the spy can locate that weapon—*The Fist of God*—in time. Peopled with vivid characters, brilliantly displaying Forsyth's incomparable, knowledge of intelligence operations and tradecraft, moving back and forth between Washington and London, Baghdad and Kuwait, desert vastnesses and city bazaars, this breathtaking novel is an utterly convincing story of what may actually have happened behind the headlines.

Thoroughly revised, this third edition focuses on modern techniques used to generate synthetic

three-dimensional images in a fraction of a second. With the advent of programmable shaders, a wide variety of new algorithms have arisen and evolved over the past few years. This edition discusses current, practical rendering methods used in games and other applications. It also presents a solid theoretical framework and relevant mathematics for the field of interactive computer graphics, all in an approachable style. The authors have made the figures used in the book available for download for fair use.: *Download Figures*.

This book describes how American international policy alternates between engagement and disengagement cycles in world affairs. These cycles provide a unique way to understand, assess, and describe fluctuations in America's involvement or non-involvement overseas. In addition to its basic thesis, the book presents a fair-minded account of four presidents' foreign policies in the post-Cold War period: George H.W. Bush, Bill Clinton, George W. Bush, and Barack Obama. It suggests recurring sources of cyclical change, along

with implications for the future. An engaged or involved foreign policy entails the use of military power and diplomatic pressure against other powers to secure American ends. A disengaged on noninvolved policy relies on normal economic and political interaction with other states, which seeks to disassociation from entanglements.

U.S. Marines In Afghanistan, 2001-2002: From The Sea Bantam
 "Jim Gillam experienced real combat in his Vietnam tour. His stunning accounts of killing and avoiding being killed ring true. Although wounded several times, Jim did not leave the field for treatment in a field hospital, so he never generated the paperwork for a Purple Heart or two or three. Although he would be appalled at the thought, his attention to duty was 'lifer' behavior, a concern for the well-being of his squad that represents the best of NCO leadership in any army."---Allan R. Millett, author of *Semper Fidelis* and coauthor of *A War to Be Won* "[Gillam] looks back on his experiences of Vietnam not solely as a participant in the war, but also with the critical eye of a trained historian... [He] uses an impressive array of after action reports, duty officer logs, battlefield reports, and

other primary source material, to back up and reinforce his recollections."---Journal of Military History review by James H. Willbanks, author of *The Offensive*
 "Gillam, a 'shake and bake' sergeant, presents a good account of small unit infantry action during the war. He is very good at explaining the weaponry, tactics, and living conditions in the field."---James E. Westheider, author of *The African-American Experience in Vietnam*
 In 1968 James T. Gillam was a poorly focused college student at Ohio University who was dismissed and then drafted into the Army. Unlike most African Americans who entered the Army then, he became a sergeant and an instructor at the Fort McClellan Alabama School of Infantry. In September 1968 he joined the First Battalion, 22nd Regiment of the 4th Infantry Division in Vietnam. Within a month he transformed from an uncertain sergeant---who tried to avoid combat---to an aggressive soldier, killing his first enemy and planning and executing successful ambushes in the jungle. Gillam was a regular point man and occasional tunnel rat who

fought below ground, an arena that few people knew about until after the war ended. By January 1970 he had earned a Combat Infantry Badge and been promoted to staff sergeant. Then Washington's politics and military strategy took his battalion to the border of Cambodia. Search-and-destroy missions became longer and deadlier. From January to May his unit hunted and killed the enemy in a series of intense firefights, some of them in close combat. In those months Gillam was shot twice and struck by shrapnel twice. He became a savage, strangling a soldier in hand-to-hand combat inside a lightless tunnel. As his mid-summer date to return home approached, Gillam became fiercely determined to come home alive. The ultimate test of that determination came during the Cambodian invasion. On his last night in Cambodia, the enemy got inside the wire of the firebase, and the killing became close range and brutal. Gillam left the Army in June 1970, and within two weeks of his last encounter with death, he was once again a college student and destined to become a

university professor. The nightmares and guilt about killing are gone, and so is the callous on his soul. Life and Death in the Central Highlands is a gripping, personal account of one soldier's war in the Vietnam War
