A comprehensive illustrated exploration of the fascinating science of color Arielle and Joann Eckstut, authors of *The Secret Language of Color*, offer a thorough, readable, and highly visual exploration of the science of color. Organized by 50 of the most essential questions about color across a variety of fields—physics, chemistry, biology, technology, and psychology—this book examines how and why we see color; how color relates to light; what the real primary colors are; how biology, language, and culture affect the colors that we see; and much more. Full of clear and elegant infographics, *What Is Color?* is a must-have for artists and designers, scientists, students, and decorators, and anyone else whose work or play involves color.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

Follows the four Big Ideas in the AP Biology curriculum, including question types and detailed answer explanations for Evolution, Energy, Information, and Interactions topics. Don't just learn why your answer is correct—learn the rationale behind why each other answer choice is incorrect, thereby reinforcing the facts you need to know in order to answer each question correctly on your AP exam. This AP Questions and Answers test prep guide has been created specifically to help you hone your critical thinking skills, give you exposure to all of the AP-style question types such as multiple-choice, numeric response, and short and long free-

response questions, and maximize your understanding of content and concepts through comprehensive explanations. It's an excellent tool for concentrated test preparation that works well alone and is doubly effective with the corresponding Barron's AP subject test review book. This introductory book emphasizes human anatomy and physiology and briefly covers basic chemistry, cells, metabolism, genetics, evolution, and ecology. It contains hundreds of beautiful illustrations and photographs in full color. With the help of 300 researchers, this introductory text has undergone extensive updating in every chapter to stay current with changes in the field. There are many organizational changes to enhance the text's flow. As with every revision, Starr and McMillan continue to enliven and improve the clarity of the writing. For this edition they have created many new conceptual illustrations that help students visualize difficult concepts and complicated biological structures.

Respiration is one of the processes that all living organisms have in common. As such it has to be one of the most important processes in biology; and one that it is always worthwhile to study and understand better. In this book I have explained the main principles of respiration and included an exam question and answer section with exam tips to help students. Often people who don't know chemistry well find respiration a difficult topic to grasp; so I have made the effort to explain the chemical terms used and make these easily understandable. Respiration is sure to come up on a Biology course; so I invite you to read this book to gain understanding of this fundamental topic. I am sure it will help you and I am very happy that it will do so.
