Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

In this book you will find everything you need to actively market yourself as a full-service financial planning consultant and turn this side of your business into a noncyclical revenue generator. Jim Ainsworth defies the positions taken by the AICPA and the College of Financial Planners that accounting professionals should not become licensed to sell investments. He provides both a strong

argument and practical advice on how and why CPAs should recommend or "sell" financial investments. He demonstrates that CPAs can provide these services to their clients at lower cost than other sources, and he rates the pros and cons of a range of investment options. And he introduces you to TOPS - Trust, Opportunity, Pain, and Solution - the low-pressure sales method that enabled him to triple his productivity in just one year without jeopardizing his relationship with his clients.

The report contains an adaptation of a unique storm-surge forecasting technique developed by Dr. C.P. Jelesnianski. This technique results in a computed storm surge profile at the inner boundary of an artificial standard basin seaward of the coast. The profile is derived from nomograms based upon a standard storm passing over a standard basin. Thumb rules and guidelines are presented in the publication for subjectively modifying the computer storm surge height as it moves shoreward of the artificial basin boundary, to fit the natural conditions of a particular coastline. Major advantages of this system are its applicability to almost any locale, its adaptability to data normally available to the field forecaster and the speed with which the forecast may be modified to remain current with natural fluctuations of the storm.
