Connecting the Dots in World History, A Teacher's Literacy Based Curriculum Cambridge University Press

This book is a history of ancient Greek and Roman professionals: doctors, seers, sculptors, teachers, musicians, actors, athletes and soldiers. These individuals were specialist workers deemed to possess rare skills, for which they had undergone a period of training. They operated in a competitive labour market in which proven expertise was a key commodity. Success in the highest regarded professions was often rewarded with a significant income and social status. Rivalries between competing practitioners could be fierce. Yet on other occasions, skilled workers co-operated in developing associations that were intended to facilitate and promote the work of professionals. The oldest collegial code of conduct, the Hippocratic Oath, a version of which is still taken by medical professionals today, was similarly the creation of a prominent ancient medical school. This collection of articles reveals the crucial role of occupation and skill in determining the identity and status of workers in antiquity.

The past thirty years have seen an explosion of interest in Greek and Roman social history, particularly studies of women and the family. Until recently these studies did not focus especially on children and childhood, but considered children in the larger context of family continuity and inter-family relationships, or legal issues like legitimacy, adoption and inheritance. Recent publications have examined a variety of aspects related to childhood in ancient Greece and Rome, but until now nothing has attempted to comprehensively survey the state of ancient childhood studies. This handbook does just that, showcasing the work of both established and rising scholars and demonstrating the variety of approaches to the study of childhood in the

classical world. In thirty chapters, with a detailed introduction and envoi, *The Oxford Handbook of Childhood and Education in the Classical World* presents current research in a wide range of topics on ancient childhood, including sub-disciplines of Classics that rarely appear in collections on the family or childhood such as archaeology and ancient medicine. Contributors include some of the foremost experts in the field as well as younger, up-and-coming scholars. Unlike most edited volumes on childhood or the family in antiquity, this collection also gives attention to the late antique period and whether (or how) conceptions of childhood and the life of children changed with Christianity. The chronological spread runs from archaic Greece to the later Roman Empire (fifth century C.E.). Geographical areas covered include not only classical Greece and Roman Italy, but also the eastern Mediterranean. *The Oxford Handbook of Childhood and Education in the Classical World* engages with perennially valuable questions about family and education in the ancient world while providing a much-needed touchstone for research in the field.

Allen Hilton examines how pagan critics ridiculed the early Christians for being uneducated, and how a few literate Christians took up pen to defend the illiterate members of their churches. Hilton sheds light on the peculiarity of this "defense?", in which the authors openly admit that the critics have the facts on their side, noting that the Book of Acts even calls two of its heroes, Peter and John, illiterates. Why did the authors of these biblical texts, intent on presenting Christianity in a positive light, volunteer such a negative detail? The answer to this question reveals a fascinating social exchange that first surrounded

education levels in antiquity, and proceeded to make its way into the New Testament. This volume provides context for pagan education as opposed to early Christian illiteracy – touching upon the methods of ancient learning and the relationship between Christian and pagan schools – and analyses the ‘uneducated virtue’ of the Apostles. Hilton provides a useful window onto the social construction of ancient education and ushers readers into the everyday experience of ancient Christians, and those who disdained and defended them.

 What is mathematics, and what aspects of it should be taught in

schools? How and to whom should it be taught, and how should its understanding be assessed? These questions continue to drive curriculum development, school organization, teaching methods, and research agendas. No one today doubts that mathematics should be taught in our schools, but this was not always so. *Mathematics Education Across Time and Place* aims to help mathematics teachers, teacher educators, and anyone else interested in mathematics education appreciate the path this discipline has taken through the ages. To understand the historical and social context for schools and the place of mathematics within them, we meet a variety of mathematics educators from different times and places. Though fictional, their lives and social circumstances are based on historical documents and professional sources. They range from ancient Greece to modern Zimbabwe; from Persia to British Columbia; from Islamic Baghdad to revolutionary Paris; from Elizabethan England to twentieth-century New York; and from the rural one-room schools of North America to the modern comprehensive secondary school. By sharing the teachers’ lives, we come to understand how they developed their love for teaching mathematics, and how their work fit into the larger social context of their time....
