Review Manual to Henry's Clinical Diagnosis and Management by Laboratory Methods Elsevier Health Sciences

The "Diversity in Clinical Neuropsychology" series is designed to highlight cultural and moderator variables involved in the study of brain-behavior relationships. Historically, the study of psychology and neuropsychology has focused on the male brain being the standard to which all or most variables are considered. The study of sex differences is perhaps the most provoking and far-reaching aspect of diversity because frequently women have unique assessment and treatment needs. For example, frontal lobe functioning tends to be more contextual for women than for men. These brain functions have behavioral counterparts that directly relate to how interventions may be tailor made to suit the female rather than male patient. The goal in neuropsychology is always to improve diagnosis and treatment outcomes, and a cohesive summary of the neuropsychology of the female brain would raise awareness and cultural competency of clinicians in neuropsychology. Authors will focus on sex differences in the neuropsychological, cognitive, and development literature; ethnic and socioeconomic variables affecting diagnosis and treatment of women; and social/emotional and behavioral manifestations of neuropsychological sex differences.

Ltd *Elsevier Comprehensive Guide To PGME With Companion Website - Volume 2* Saunders "MCQs, SAQs, EMQs and OSCEs for Oral Pathology and Oral Medicine-An exam-focused Approach" is designed to serve as a companion to the available textbooks in oral pathology and oral medicine and is meant to serve as a revision tool for dental students and graduates preparing for examinations. The book is structured to complement student lecture notes, recommended textbooks and past exam papers. Globally, the current trend is to use a combination of multiple-choice questions (MCQs), short answer questions (SAQs), extended matching questions (EMQs) and objective structured clinical examination (OSCE) stations in the examination process. Available textbooks in oral pathology and oral medicine are not of much value to students preparing for exams using these assessment formats. The aim of this book therefore is to offer students with a single source that would assist them to prepare for exams. Target audience for this book includes dental students, oral health therapy and dental hygiene students, overseas-trained dental graduates preparing for board or licensing examinations and those preparing for membership or fellowship examinations of the Royal Surgical Colleges.
