Synopsis of Neurology, Psychiatry and Related Systemic Disorders Cambridge University Press
 This book contains a variety of medical case studies from actual patients presenting to the emergency department. It includes not only typical cases that present to the ED but also less common, yet very important cases that one can't afford to miss. Each chapter begins with a case – or set of cases with typical and atypical aspects – of the disease in question. This is followed by high-value learning points on the condition with introductory/background points, physiology and pathophysiology of the disease, how to make the diagnosis, and finally how to initiate treatment. The cases provide expert discussion with tips and tricks, personal experience with management of each of the cases, and a follow-up description of the outcome of the cases to provide the reader with closure. To supplement each case study, all 67 chapters include a pattern recognition component that identifies the key diagnostic features of the disease discussed. The chapters

conclude with a summary of the diagnostic and treatment details of each condition. Using a concise, easy-to-read, bulleted format, the book helps readers to learn, evaluate, adopt new practices, right now (LEARN). *Emergency Medicine Case Studies - LEARNING Rounds: Learn, Evaluate, Adopt, Right Now* is an essential resource for a variety of emergency medicine clinicians including experienced physicians, residents, physician assistants, nurse practitioners, nurses, and medical students rotating in the emergency department. Finally, this book can be used as a basis for small group discussions, especially in emergency medicine training programs.
Clinical Ocular Pharmacology BoD – Books on Demand
 This concise review of medical pharmacology is designed to help medical students streamline their study for course review and help prepare for the USMLE Step 1. Each chapter presents specific drugs and discusses their general properties, mechanism of action, pharmacologic effects, therapeutic uses, and adverse effects. Drug lists and two-color tables and figures summarize essential information. USMLE-style review questions and answers with explanations follow each chapter and a comprehensive examination appears at the end of the book. A companion website

offers fully searchable text and an interactive question bank with questions from the book.

Drug-Induced Liver Injury Lippincott Williams & Wilkins

The perfect companion to *Drug Therapy in Nursing, Second Edition*, this invaluable study partner delivers guidance on individual patient management from a nurse-as-caregiver perspective, helping you build essential knowledge and develop sound practice skills. Knowledge-building features include Top Ten Things to Know lists, key terms, multiple-choice questions, case studies, and critical thinking challenges. A "Just the Facts" feature helps deepen your understanding of essential drugs, their actions, indications, contraindications, and cautions. A "Patients Please" feature helps you put the needs of the patient first, with facts on core patient variables.

Death Scene Investigation Elsevier Health Sciences

Symptoms and signs in neurology and psychiatry typically present in the clinical context of other underlying conditions. When evaluating a patient, a physician may choose to review a diverse list of potential underlying diagnoses with the aid of the editor team's existing text: *Neurological Differential Diagnosis: A Case-Based Approach*. However, if the patient has a known pre-existing condition, the physician will need to consider a reverse approach - considering what complications of that condition may be associated with current symptoms. This book provides quick-reference, comprehensive, concise summaries of neurologic, psychiatric and medical diagnoses with a focus on neurologic and psychiatric implications of systemic disorders. A separate pharmacology section provides a consolidated review of potential neurologic and psychiatric adverse effects of medications. This book is an invaluable resource for a broad medical audience, from the medical student to the experienced consultant.
