 On a Ford 172 or Ford 192 industrial engine the distributor drive rod performs a very important function. This Ford 172 distributor drive shaft is a hex sided shaft made of hardened steel, 3.93" long with chamfered ends. This drive rod connects the distributor with the oil pump. The Ford 172 or 192 engine's cam gear drives the distributor which then through this short shaft drives the oil pump.
 Tech Tip #129: Ford 172 and Ford 192 Industrial Engine ...
 Ford started using the 172 cid 4 cylinder gas engine in the mid 50's and it is a very popular engine with a vast supply in boneyards. The engine was used on everything from pumps, welders, air compressors, and just about anything else industrial too as well as skid steer loaders. The cylinder bore is 3.90" and stroke is 3.60".

 I suspect you have a 192 cubic in industrial engine. But the only difference between a 172 and a 192 is the bore and possibly casting (D3JL = 192, D2JL = 172 per a rebuilders parts list) both are 1970's vintage.

 Ford Industrial Engines - Operator's Manual
 How you identify Ford industrial engines depends on the engine in question, and finding the casting number is your primary challenge. The casting number may be in several locations. Ford marks its industrial engines according to the same general system as it does those for automobile and truck engines.

 hundred series has the same 134 cubic inch engine, but the larger models came with a beefier 172 cubic inch engine. These engines

are similar enough that you can swap them around. It's an easy bolt-for-bolt change to put a larger 172 cubic inch engine in a Jubilee Ford tractor.

 We resleeved a 172 to the 4.160 bore of a 192+.030. The engine is in a 960 puller and has been dry blocked. It never overheats even on back to back pulls. I used the 172 head and cut it to 64cc chambers, did some intake port work, added larger valves, better springs and a cam reground by Bullet Cams.
