Optimal Design and Retrofit of Energy Efficient Buildings, Communities, and Urban Centers presents current techniques and technologies for energy efficiency in buildings. Cases introduce and demonstrate applications in both the

design of new buildings and retrofit of existing structures. The book begins with an introduction that includes energy consumption statistics, building energy efficiency codes, and standards and labels from around the world. It then highlights the need for integrated and comprehensive energy analysis approaches. Subsequent sections present an overview of advanced energy efficiency technologies for buildings, including dynamic insulation materials, phase change materials, LED lighting and

daylight controls, Life Cycle Analysis, and more. This book provides researchers and professionals with a coherent set of tools and techniques for enhancing energy efficiency in new and existing buildings. The case studies presented help practitioners implement the techniques and technologies in their own projects. Introduces a holistic analysis approach to energy efficiency for buildings using the concept of energy productivity Provides coverage of individual buildings, communities and urban centers Includes

both the design of new buildings and retrofitting of existing structures to improve energy efficiency. Describes state-of-the-art energy efficiency technologies. Presents several case studies and examples that illustrate the analysis techniques and impact of energy efficiency technologies and controls.

Designed to help students learn fundamental electrical concepts and explore their practical applications, this trusted text provides a solid foundation in electron theory and movement, direct-current series circuits, parallel circuits, series-parallel circuits, voltage line drops, rotating machinery fundamentals, and more. **ELECTRICITY 1: DEVICES, CIRCUITS AND MATERIALS**, Tenth Edition, maintains the user-friendly style and proven instructional approach that are so effective, all while incorporating new material and updates based on the 2011 National Electrical Code. Featuring current industry terminology, photographs of commonly used electrical equipment, and sample problems with solutions, this convenient, affordable text is an ideal

choice for your class formastering basic electricity, house wiring, or commercial installations. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Impact of Minimum Wage Regulations on Educational Incentives for the Youth Oxford University Press

This book presents an overview of online arbitration and electronic contracting worldwide, examining their national and international contexts, and assessing their ongoing relevance. It offers solutions to the salient challenges facing both online arbitration and electronic contracting, dealing first-hand with online arbitration as an online dispute resolution technique for solving both traditional and electronic commerce disputes that may arise out of the breach of contractual obligations in international commercial contracts, while also comparing between common law and civil law countries. In the theory of law, this book analyses the international legal framework that regulates e-commerce, and its impact on electronic contracting, including Model Laws and International Conventions such as the Model Law on

Electronic Commerce of 1996 and the Electronic Communications Convention of 2005. It also investigates whether the UN Convention on Contracts for the International Sale of Goods of 1980 'The CISG' applies to e-commerce contracts. In addition, it extensively examines the possibility for the enforcement of online arbitration agreements and online arbitral awards under the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards of 1958.

Regarding the practice of law, the volume examines how national courts apply both national laws and the New York Convention of 1958 when dealing with the enforcement of online arbitration agreements, and whether courts apply the provisions of national laws of arbitration liberally. As such, it encourages the adoption of a more liberal judicial regime in favour of the enforcement of online arbitral awards and online arbitration agreements in national courts. This book represents a valuable resource for academics, arbitrators, practicing lawyers, corporate counsels, law students, researchers, and professionals who are willing to solve their cross-border

commercial disputes through online arbitration.

This impartial study analyses the role of employer's organisations and trade unions in climate change policy and its impacts on the labour market. The policies of government to manage greenhouse gas emissions will require business to change its product and service delivery arrangements, which in turn means labour requirements will also change. The book also considers whether labour market issues should be explicit in the theoretical framework of ecological modernisation as it guides the policy development process.

International Trade Theory and Policy

John Wiley & Sons

International Trade: Theory, Evidence and Policy provides an integrated non-mathematical account of trade theory and policy that can be read straight through. The footnotes provide caveats, extensions and entry points, or further reading. This book is divided into three parts. The first part focuses on the core theoretical analysis of international trade that has evolved over a quarter-millennium. The

second part reviews recent empirical research in global value chains, trade costs, and heterogeneous firms, particularly from analysing large datasets of individual firms' characteristics and of trade flows disaggregated to very finely detailed levels. The third section of the book analyzes trade policies and discusses current policy debates. This edition is based on Pomfret's Lecture Notes on International Trade Theory and Policy, first published in 2008. The content has been extensively updated and revised to stand as a new volume.

Global Marketing provides students with a truly international treatment of the key principles that every marketing manager should grasp. International markets present different challenges that require a marketer to think strategically, and apply tools and techniques creatively in order to respond decisively in a fiercely competitive environment. Alon et al. provide students with everything they need to rise to the challenge: Coverage of small and medium enterprises, as well as multinational corporations, where much of the growth in international trade and global marketing has occurred. A shift toward greater consideration of services marketing as more companies move away from manufacturing. A focus on emerging markets to equip students with the skills necessary to take advantage of the opportunities that these rapidly growing regions present. Chapters on social media, innovation, and technology teach students how to incorporate these new tools into their marketing strategy. New material on sustainability, ethics, and corporate social responsibility; key values for any modern business. Short cases and examples throughout the text show students how

these principles and techniques are applied in the real world. Longer cases provide instructors and students with rich content for deeper analysis and discussion. Covering key topics not found in competing books, Global Marketing will equip students with the knowledge and confidence they need to become leading marketing managers. A companion website features an instructor's manual with test questions, as well as additional exercises and examples for in-class use. *Online Arbitration in Theory and in Practice*

Edward Elgar Publishing Neurophysiological and psychological modifications induced by meditation practice have been consistently addressed by neuroscience. Training meditation practice induced plasticity (Barinaga, 2003; Knight, 2004), and as a consequence several benefit for mental and physical health (Davidson & McEwen, 2012), and cognitive performance. One goal of meditation is to achieve the light of consciousness observing with equanimity (the right distance) clouds of the mind wandering. This Frontiers Research Topic brings together studies from groups of authors whose research focus on neuropsychological systems involved in meditation demonstrating how meditation activates and can modify brain areas, cognitive mechanisms and well-being. This book constitutes the refereed proceedings of the 26th Australasian Database Conference, ADC 2015, held in Melbourne, VIC, Australia, in June 2015. The 24 full papers presented together with 5 demo papers were carefully reviewed and selected from 43 submissions. The Australasian Database Conference is an

annual international forum for sharing the latest research advancements and novel applications of database systems, data driven applications and data analytics between researchers and practitioners from around the globe, particularly Australia and New Zealand. The mission of ADC is to share novel research solutions to problems of today's information society that fulfill the needs of heterogeneous applications and environments and to identify new issues and directions for future research. ADC seeks papers from academia and industry presenting research on all practical and theoretical aspects of advanced database theory and applications, as well as case studies and implementation experiences.

The dominant capital structure studies across the globe have been concentrated in developed countries and specifically for listed companies and few on unlisted companies or mixed companies. This thesis aims to examine the extent to which company liquidity, profitability, tangibility, and company size influence the leverage of Tanzanian companies as

suggested by pecking order and trade-off theory. The study findings show a negative relationship between company liquidity and company leverage as measured by debt ratio and debt-to-equity ratio. These findings show the validity of the pecking order theory in Tanzania. The postulates of the trade-off theory as far as liquidity is concerned are not valid. The study findings also reveal a positive relationship between profitability and leverage, suggesting that majority of Tanzanian companies used more debts as the means of financing their business operations despite their profitability. The study also found that the tangibility of listed companies was higher than that of the unlisted companies and that there was a negative relationship between tangibility and leverage, which is valid to pecking order but contrary to trade-off theory. As far as company size is concerned, study findings suggest that pecking order theory (POT) and trade-off theory (TOT) relevance cannot be fully supported in Tanzanian companies as the findings have revealed a negative relationship between company size and leverage. Findings reveal a negative relationship between company

size and leverage. Pecking order theory (POT) and trade-off theory (TOT) relevance cannot be fully supported in Tanzanian companies, and size of listed companies was higher than that of the unlisted companies. This suggests that the size of majority of Tanzanian unlisted companies is still small as compared to the listed companies.

Advances in Phytochemistry, Textile and Renewable Energy Research for Industrial Growth CRC Press

Although it is popularly assumed that the history of computing before the second half of the 20th century was unimportant, in fact the Industrial Revolution was made possible and even sustained by a parallel revolution in computing technology. An examination and historiographical assessment of key developments helps to show how the era of modern electronic computing proceeded from a continual computing revolution that had arisen during the mechanical and the electrical ages. This unique volume introduces the history of computing during the "first" (steam) and "second" (electricity) segments of the Industrial Revolution, revealing how this history was pivotal to the emergence of electronic computing

and what many historians see as signifying a shift to a post-industrial society. It delves into critical developments before the electronic era, focusing on those of the mechanical era (from the emergence of the steam engine to that of the electric power network) and the electrical era (from the emergence of the electric power network to that of electronic computing). In so doing, it provides due attention to the demarcations between—and associated classifications of—artifacts for calculation during these respective eras. In turn, it emphasizes the history of comparisons between these artifacts. Topics and Features: motivates exposition through a firm historiographical argument of important developments explores the history of the slide rule and its use in the context of electrification examines the roles of analyzers, graphs, and a whole range of computing artifacts hitherto placed under the allegedly inferior class of analog computers shows how the analog and the digital are really inseparable, with perceptions thereof depending on either a full or a restricted view of the computing process investigates socially situated comparisons of computing history,

including the effects of a political economy of computing (one that takes into account cost and ownership of computing artifacts) assesses concealment of analog-machine labor through encasement (“black-boxing”) Historians of computing, as well as those of technology and science (especially, energy), will find this well-argued and presented history of calculation and computation in the mechanical and electrical eras an indispensable resource. The work is a natural textbook companion for history of computing courses, and will also appeal to the broader readership of curious computer scientists and engineers, as well as those who generally just have a yearn to learn the contextual background to the current digital age. "In this fascinating, original work, Tymnas indispensably intertwines the histories of analog and digital computing, showing them to be inseparable from the evolution of social and economic conditions.  Kim Leonie Kellermann analyzes the

impact of sectoral minimum wages in Germany on the willingness of youths to undergo apprenticeship training. Using data from the German Socio-economic Panel, the author shows that higher wage floors set small, positive incentives for vocational training in the respective sectors. In case employers have to pay higher wages, they preferably hire qualified workers so that the worse job prospects of the low-skilled outweigh the potential pay increase. In order to preserve these training opportunities, it can make sense for policymakers to exempt apprentices from minimum wages since subminimum apprenticeship rewards are more appealing to firms.

This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life-Cycle Civil Engineering (IALCCE2018), held in Ghent, Belgium, October 28-31, 2018. It consists of a book of extended abstracts and a USB device with full papers including the Fazlur R. Khan lecture, 8 keynote lectures, and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance or optimization

in the framework of life-cycle analysis of civil engineering structures and infrastructure systems. Life-cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness and resilience. Applications relate to buildings, bridges and viaducts, highways and runways, tunnels and underground structures, off-shore and marine structures, dams and hydraulic structures, prefabricated design, infrastructure

systems, etc. During the IALCCE2018 conference a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life-cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting edge information for anyone interested in life-cycle analysis and assessment in civil engineering, including researchers, practising engineers, consultants, contractors, decision makers and representatives from local authorities.
