How the marriage of Industry 4.0 and the Circular Economy can radically transform waste management—and our world Do we really have to make a choice between a wasteless and nonproductive world or a wasteful and ultimately self-destructive one? Futurist and world-renowned waste management scientist Antonis Mavropoulos and sustainable business developer and digital strategist Anders Nilsen respond with a ringing and optimistic “No!” They explore the Earth-changing potential of a happy (and wasteless) marriage between Industry 4.0 and a Circular Economy that could—with properly reshaped waste management practices—deliver transformative

environmental, health, and societal benefits. This book is about the possibility of a brand-new world and the challenges to achieve it. The fourth industrial revolution has given us innovations including robotics, artificial intelligence, 3D-printing, and biotech. By using these technologies to advance the Circular Economy—where industry produces more durable materials and runs on its own byproducts—the waste management industry will become a central element of a more sustainable world and can ensure its own, but well beyond business as usual, future. Mavropoulos and Nilsen look at how this can be achieved—a wasteless world will require more waste management—and examine obstacles and opportunities such as demographics, urbanization, global warming, and the environmental strain caused by the rise of the global middle class. · Explore the new prevention, reduction, and elimination methods transforming waste management · Comprehend and capitalize on the business implications for the sector · Understand the theory via practical examples and case studies · Appreciate the social benefits of the new approach Waste-management has always been vital for the protection of health and the environment. Now it

can become a crucial role model in showing how Industry 4.0 and the Circular Economy can converge to ensure flourishing, sustainable—and much brighter—future.

Linguistic and Material Intimacies of Cell Phones offers a detailed ethnographic and anthropological examination of the social, cultural, linguistic and material aspects of cell phones. With contributions from an international range of established and emerging scholars, this is a truly global collection with rural and urban examples from communities across the Global North and South. Linking the use of cell phones to contemporary discussions about representation, mediation and subjectivity, the book investigates how this increasingly ubiquitous technology challenges the boundaries of privacy and selfhood, raising new questions about how we communicate.

Buying shares either to invest in the short or long term or for trading only requires information on how the issuer or company places its shares on the IDX. Information regarding the type of business

run by the issuer, ownership information and composition must at least be known by investors and traders or even prospective stock players who are still in the learning stage. This book briefly reveals the business background of all issuers listed on the IDX. As of January 2022, 769 issuers with 769 stock codes have been listed on the IDX from various industries.

The cell phone is the fastest-selling consumer electronic in the world. On a global basis, over 800 million cellular telephones are sold yearly. More camera-equipped cell phones are sold each year than stand alone digital cameras. Rapid development of new technologies is leading to ever more versatile, multipurpose mobile devices, including 3G Internet-enabled cell phones and PDAs. Meanwhile, wireless networking and wireless Internet access are developing and expanding on a global basis at a rapid rate. Booming technologies include such 802.11 standards as Wi-Fi and WiMax, as well as Ultra Wide Band (UWB) and Bluetooth. Telematics, intelligent transportation systems (ITS) and satellite radio will soon create an entertainment, navigation and communications revolution within automobiles and trucks. Meanwhile, RFID (radio frequency identification) will revolutionize wireless tracking, inventory and logistics at all levels, from manufacturing to shipping to retailing. These developments are creating challenges for legacy companies and opportunities for nimble marketers and managers. Plunkett's Wireless, Wi-Fi, RFID & Cellular Industry Almanac 2008 covers such sectors. Our coverage includes business trends analysis and industry statistics. We also include a wireless and cellular business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 350 company profiles include complete business descriptions and up to 27 executives by name and title.

Taking a critical and historical view, this text explores the theory and changing practice of international development. It provides an overview of how the field has evolved and the concrete impacts of this on the ground on the lives of people in the Global South. Development Theory and Practice in a Changing World covers the major theories of development, such as modernisation and dependency, in addition to anti-development theories such as post-modernism and decoloniality. It examines the changing nature of immanent (structural) conditions of development in addition to the main attempts to steer them (imminent development). The book suggests that the era of development as a hegemonic idea and practice may be coming to an end, at the same time as it appears to have achieved its apogee in the Sustainable Development Goals as a result of the rise of ultra-nationalism around the world, the increasing importance of securitisation and the existential threat posed by climate change. Whether development can or should survive as a concept is interrogated in the book. This book offers a fresh and updated take on the past 60 years of development and is essential reading for advanced undergraduate students in areas of development, geography, international studies, political science, economics and sociology.
