The use of ultrasonic scans in pregnancy makes it possible to observe the fetus undisturbed in the womb. Dr Alessandra Piontelli has done what no one has done before: she observed eleven fetuses (three singletons and four sets of twins) in the womb using ultrasound scans, and then observed their development at home from birth up to the age of four years. She includes a description of the psychoanalytic psychotherapy of one of the research children, and the psychoanalysis of five other very young children whose behaviour in analysis suggested that they were deeply preoccupied with their experience in the womb. Dr Piontelli has discovered what many parents have always thought - that each fetus, like each newborn baby, is a highly individual creature. By drawing on her experience as a child psychotherapist and psychoanalyst as well as on her observational research, she is able to investigate issues relating to individuality, psychological birth and the influence of maternal emotions during pregnancy. Her findings demonstrate clearly how psychoanalytical evidence enhances, deepens and supports observational data on the remarkable behavioural and psychological continuities between pre-natal and post-natal life.

[There has been an] extraordinary shift in how we understand and treat psychosis, none more so than in the arena of Early Intervention (EI) bringing with it new hope for young people with emerging psychosis and their families. From the introduction to the book Centred around the Early Psychosis Declaration (EPD), this book explores the declaration's five themes through contributions from a sizeable number of mental health practitioners, service-users and carers. It is designed to help those working with people experiencing psychosis at an early stage of illness to develop and implement effective early intervention skills, enabling them to examine and refine their practice. Most importantly, the book is a practical guide to delivering early

intervention strategies with a unique focus on recovery. Includes an abundance of case studies to link theory to practice Evidence-based Edited by a team with a wealth of clinical and research experience Suitable for qualified practitioners from all disciplines working in the Early Intervention field, including mental health nurses, psychiatrists, social workers, occupational therapists, clinical psychologists and lecturer/practitioners Psychoanalysis and Psychotherapy Oxford University Press The Mclean Screening Instrument-BPD Is A 10-Item, Yes/No, Self-Report Patient Screening Scale. This book analyzes the factors and mechanisms involved in the development and adaptation of children and adolescents to adverse and risky contexts in four Latin American countries: Argentina, Brazil, Chile and Mexico. The experience of growing up in contexts of poverty and social vulnerability is a risk factor for child and adolescent development which may produce a series of negative effects in their adulthood, including mental disorders. This is a global concern, but so far the majority of literature about the topic has focused on developed countries. This volume aims to enrich the international literature by presenting results of research carried out in developing countries, showing how children and adolescents deal with adverse and risky contexts and analyzing both negative outcomes and the development of resilience and coping strategies. The studies gathered in this volume are theoretically grounded on systemic and ecological models which analyze developmental trajectories and outcomes taking into account the interaction of different ecological systems, such as the individual, the family, the school and the wider society. Departing from this theoretical framework, the chapters in this volume analyze the risk factors posed to child and adolescent development by adverse and risky social contexts and present evidence-based interventions aimed at both preventing

negative outcomes and helping children and adolescents develop coping strategies to deal with adverse situations, such as poverty and social marginalization. *Child and Adolescent Development in Risky Adverse Contexts: A Latin American Perspective* will be of interest to developmental, clinical, health, and educational psychologists, as well as social workers, directly working or doing research with children and adolescents in situations of social vulnerability.

Numerical Methods and Advanced Simulation in Biomechanics and Biological Processes covers new and exciting modeling methods to help bioengineers tackle problems for which the Finite Element Method is not appropriate. The book covers a wide range of important subjects in the field of numerical methods applied to biomechanics, including bone biomechanics, tissue and cell mechanics, 3D printing, computer assisted surgery and fluid dynamics. Modeling strategies, technology and approaches are continuously evolving as the knowledge of biological processes increases. Both theory and applications are covered, making this an ideal book for researchers, students and R&D professionals. Provides non-conventional analysis methods for modeling Covers the Discrete Element Method (DEM), Particle Methods (PM), MeshLess and MeshFree Methods (MLMF), Agent-Based Methods (ABM), Lattice-Boltzmann Methods (LBM) and Boundary Integral Methods (BIM) Includes contributions from several world renowned experts in their fields Compares pros and cons of each method to help you decide which method is most applicable to solving specific problems

This book is about understanding and managing patients with severe personality disorders. It covers biological, psychoanalytic and cognitive behavioral approaches and provides a pragmatic guide to best practice. As well as discussing issues of severity, treatability and the range of appropriate management options,

the content explores the common elements of effective interventions and covers early prediction, countertransference, disruptions of the therapeutic alliance, suicidal crises and what to do when dealing with dangerous, refractory and stalking patients. The chapters are authored by an international cast of distinguished investigators and innovators from the field. This is a holistic, practical guide to the treatment of patients with a range of these disorders and it should be read by members of the mental health team dealing with this challenging clinical group. The baby owls came out of their house, and they sat on the tree and waited. A big branch for Sarah, a small branch for Percy, and an old piece of ivy for Bill. When three baby owls awake one night to find their mother gone, they can't help but wonder where she is. Stunning illustrations from unique and striking perspectives capture the owls as they worry about their mother: What is she doing? When will she be back? What scary things move all around them? Not surprisingly, a joyous flapping and dancing and bouncing greets her return, lending a celebratory tone to the ending of this comforting tale. Never has the plight of young ones who miss their mother been so simply told or so beautifully rendered.

A steady best-seller and *The Invisible String* is reaching all over the World! OVER 400,000 copies sold! "That's impossible", said twins Jeremy & Liza after their Mom told them they're all connected by this thing called an Invisible String. "What kind of

string"? They asked with a puzzled look to which Mom replied, "An Invisible String made of love." That's where the story begins. A story that teaches of the tie that really binds. *The Invisible String* reaches from heart to heart. Does everybody have an Invisible String? How far does it reach, anyway? Does it ever go away? Read all about it! *THE INVISIBLE STRING* is a very simple approach to overcoming the fear of loneliness or separation with an imaginative flair that children can easily identify with and remember. Here is a warm and delightful lesson teaching young and old that we aren't ever really alone and reminding children (and adults!) that when we are loved beyond anything we can imagine. "People who love each other are always connected by a very special String, made of love. Even though you can't see it with your eyes, you can feel it deep in your heart, and know that you are always connected to the ones you love." Thus begins this heart-warming and reassuring story that addresses the issue of "separation anxiety" (otherwise known as the sense of existential 'aloneness') to children of all ages. Specifically written to address children's fear of being apart from the ones they love, *The Invisible String* delivers a particularly compelling message in today's uncertain times that though we may be separated from the ones we care for, whether through anger, or distance or even death, love is the unending connection that binds us all, and, by extension, ultimately binds every person on the planet to everyone else. Parents and children everywhere who are looking for reassurance and reaffirmation of the transcendent power of love, to bind, connect and comfort us through those inevitable times when life challenges us! Let's tell the whole world that we are ALL connected by Invisible Strings! Adopted by Military Library Services & Foster Care Agencies Recommended by Bereavement Support Groups and Hospice Centers

As research emerges on the effectiveness of psychological therapies for bipolar disorder, this is the first manual guiding the treatment of those in adolescence and early adulthood, taking into account the developmental issues which can have significant impact on therapeutic outcomes. Core issues covered include engagement difficulties, how cognitive therapy should be adapted for adolescents, the impact of the disorder on the person's psychosocial development, managing comorbidity (particularly

alcohol and substance use), medication adherence, the impact of family dynamics, and issues around control and independence in the therapeutic relationship. The manual is illustrated with case studies and text boxes describing tips and techniques for the therapist. Providing clear clinical guidance, backed by an extensive literature review and theoretical overview, this is essential reading for all mental health specialists implementing psychological interventions for young people with bipolar disorder.

In this, the sixth volume in the highly successful monograph series produced under the auspices of the European Federation for Psychoanalytic Psychotherapy in the Public Health Services (EFPP), the clear distinctions which once existed between psychoanalysis proper and the psychoanalytic psychotherapies are strongly debated and reassessed in the light of contemporary paradigm shifts in treatment modalities.

The Member States in the WHO European Region met at the WHO European Ministerial Conference on Mental Health in Helsinki in January 2005 to tackle one of the major threats to the well-being of Europeans: the epidemic of psychosocial distress and mental ill health. These countries took mental health from the shadow of stigma and discrimination and brought it to the centre of the public health policy arena. By adopting the Mental Health Declaration and Action Plan for Europe they set the course for mental health policy for the next 5-10 years. Member States now face the challenge of acting on the principles of the Declaration and accomplishing the goals in the Action Plan's 12 areas of work. This book contributes to the achievement of this task by describing the current situation in the Region presenting the texts of the Declaration and Action Plan offering brief discussions of the areas of work (with examples of initiatives already underway in each) and describing WHO's plans to assist Member States in improving mental health in the European Region.

The first edition of *Formulation in Psychology and Psychotherapy* caught the wave of growing interest in formulation in a clinical context. This completely updated and revised edition summarises recent practice, research, developments and debates while retaining the features that made the first a leading text in the field. It contains new chapters on personal construct formulation, formulation in health settings, and the innovative practice of using formulation in teams. The book sees formulation as a dynamic process which explores personal meaning collaboratively and reflectively, taking account of relational and social contexts. Two case studies, one adult and one child, illustrate the use of formulation from the perspectives of expert clinicians from six different theoretical positions. The book encourages the reader to take a constructively critical perspective on the many

philosophical, professional and ethical debates raised by the process of formulating people's problems. Among the issues explored are: The social and political context of formulation Formulation in relation to psychiatric diagnosis The limitations of formulation Controversies and debates about formulation This readable and comprehensive guide to the field provides a clear, up to date and thought-provoking overview of formulation from a number of perspectives, essential for clinicians working in all areas of mental health and social care, psychology, therapy and counselling.

Based on the experience of many countries in the WHO European Region and the advice of experts, this guide outlines some of the steps prison systems should take to reduce the public health risks from compulsory detention in often unhealthy situations, to care for prisoners in need and to promote the health of prisoners and prison staff. This requires that everyone working in prisons understand how imprisonment affects health, what prisoners' health needs are, and how evidence-based health services can be provided for everyone needing treatment, care and prevention in prison. Other essential elements are being aware of and accepting internationally recommended standards for prison health; providing professional care with the same adherence to professional ethics as in other health services; and, while seeing individual needs as the central feature of the care provided, promoting a whole-prison approach to care and promoting the health and well-being of people in custody.

Severe Personality Disorders Oxford University Press

The treatment of early psychosis has been bedevilled by an entrenched pessimism, stemming from the asylum era and the Kraepelinian model of schizophrenia. More recently, however, there has been a surge of interest in preventively oriented treatment of patients showing the first signs of psychotic illness, with the realization that these illnesses are frequently highly responsive to early treatment. This is the first text to focus on the potential of early detection of psychosis, and the practicalities of treatment. Based on the pioneering experience and research of a now well-established prevention and intervention centre, and with contributions from international authorities, the book outlines a framework for intervention, reviews the evidence available to

guide clinical practice, and describes models of treatment.

Incorporating many personal narratives and case histories, it is strong on theory, sensitive on practical issues, and will challenge, inform and guide clinicians.

The Controversies and the Future Cambridge University Press
Songs and Politics in Eastern Africa brings together important essays on songs and politics in the region and beyond. Through an analysis of the voices from the margins, the authors (contributors) enter into the debate on cultural productions and political change. The theme that cuts across the contributions is that songs are, in addition to their aesthetic appeal, vital tools for exploring how political and social events are shaped and understood by citizens. Urbanization, commercialization and globalization contributed to the vibrancy of East African popular music of the 1990s which was marked by hybridity, syncretism and innovativeness. It was a product of social processes inseparable from society, politics, and other critical issues of the day. The lyrics explored social cosmology, worldviews, class and gender relations, interpretations of value systems, and other political, social and cultural practices, even as they entertained and provided momentary escape for audience members. Frustration, disenchantments, and emotional fatigue resulting from corrupt and dictatorial political systems that stifle the potential of citizens drove and still drive popular music in Eastern Africa as in most of Africa. Songs and Politics in Eastern Africa is an important addition to the study of popular culture and its role in shaping society.

This ambitious resource presents an inventive approach to integrating pediatric and mental health care based in

comprehensive, family-centered service delivery. Its framework adds a problem-solving focus to the core principles of pediatric consultation-liaison psychiatry, emphasizing young patients' developmental, family, and social context. An international panel of expert clinicians explores the value of the mental health component in treating complex and chronic cases across varied settings, as well as practical considerations in implementing collaborative pediatric care systemwide, including at the global

level. Detailed case histories illustrate skills and traits essential to making this problem-based approach work, such as multidimensional thinking, a prevention mentality, a dedication to lifelong learning, and empathy and respect for young clients and their families. Included in the coverage: · Pediatric medicine for the child psychiatrist. · Safety issues in a general medical facility setting. · "Other medical" presentations and considerations in

pediatric consultation-liaison psychiatry. · Principles of biopsychosocial formulation and interventions in the pediatric medical setting. · Preventive models for reducing major causes of morbidity and mortality in childhood. Child and adolescent psychiatrists, child and school psychologists, and physicians in pediatrics, general practice, and family medicine will welcome Pediatric Consultation-Liaison Psychiatry as both a robust training text and a blueprint for the future of children's medicine.
