What's the Matter with Starting Sixth Grade by Kelley Staggs In this middle school student science book, What's the Matter with Starting Sixth Grade, the main concepts of physics and chemistry are explained through narrative, non-fiction text. Using concrete examples of mass and matter, students explore important ideas to understand mass, matter, atoms, molecules, gravity, volume, density, and buoyancy. Famous scientists such as John Dalton and Archimedes are introduced and their important theories and principals are each explained. The connection is made between concrete examples from the classroom to more abstract ideas such as the gravitational pull and mass of planets or black holes, the density of neutron stars, and space science technologies. Math instruction related to gravity and weight, volume, and density is modeled and practiced. Inquiry learning is promoted through researching and testing questions related to the topics. Each concept has an interactive link to computer simulated

activities from the University of Colorado, a check for understanding quiz linked to Smart board express, supportive video clips, and even an interactive Periodic Table of Elements. Appendixes include resources and related activities. The book contents work well in hard copy or as an e-book edition. Have fun exploring What's Matter with Starting Sixth Grade!

Geology is everywhere in our daily lives. We are surrounded by materials and resources extracted from the Earth, our climate is changing at alarming rates, and hazards due to Earth's processes are leading to major catastrophes. We will be reliant upon a population of informed citizens to make and vote for policies that protect our Earth, and change that will keep our planet habitable. Therefore, understanding our Earth has never been more important. Understanding Earth leads the way by fully integrating the study of climate science into the core intro geology curriculum. Through strategic placement of the climate science chapters at the beginning of the geomorphology content, we offer a text that places our changing climate as a key force shaping the rest of our discussion on Earth's surficial processes.
