...Database Systems Introduction to Databases and Data ...The first part focuses on relational databases and presents the notions of integrity constraints, data consistency, transactions and normalization, both in single-server and distributed environments. The second part will introduce the four families of NoSQL databases, with a special focus on document (MongoDB) and graph databases (Neo4j). Introduction to Databases | Gianluca Quercini What is a database? A database is an organized set of data stored electronically in a computer system. Databases required a software layer that serves as an interface between the data and the users. This layer is known as a database management system or DBMS. There are many kinds of databases, but in general, you may label them as relational and non-relational databases. Relational databases are by far the most common.
