Im Falkland-Konflikt geht es um ein Waffengeschäft, das ebenso absurd wie schmutzig ist: Um englische Schiffe zu versenken, müssen die Argentinier um jeden Preis die Exocet-Rakete beschaffen, die ausgerechnet Frankreich, der Bündnispartner der Briten, entwickelt hat. Und es sieht ganz so aus, als ob das Geschäft über die Waffenbrüderschaft von Briten und Franzosen siegen wird ... (Dieser Text bezieht sich auf eine frühere Ausgabe.)

Norie's Nautical Tables with Explanations of Their Use Imray, Laurie, Norie and Wilson Ltd

Im Mittelpunkt der Studie steht die Sozial- und Mentalitätsgeschichte der arabischen Gesellschaft in der zweiten Hälfte des 7. Jahrhunderts, einer Epoche des Überganges von der vorislamischen zur islamischen Kultur. Die Quellengrundlage der Untersuchung stellen die Werke des Dichters Abu-Sahr al-Hudali dar, die zum ersten Mal in der arabistischen Forschung eingehend analysiert und interpretiert werden. Der Wandel der literarischen Formen in der fruhislamischen Poesie wird in seinen literaturwissenschaftlichen Aspekten dargestellt und im Kontext der philosophischen Anthropologie und der Religionsgeschichte behandelt. Neben literaturhistorischen Fragen bietet das Buch Einblick in wichtige Themenkreise der fruhislamischen anthropologischen Vorstellungen wie Individuum, Schicksal und Zeit. Die Werke des Abu-Sahr werden dem Leser vollständig in arabischer Sprache sowie in einer deutschen Übersetzung angeboten.

Norie's Nautical Tables Imray Laurie Norie & Wilson

Der Klassiker unter den Seefahrerepen: Horatio Hornblowers achtetes Abenteuer. In der sturmumtosten Ostsee muss der Kommodore Hornblower gleich an zwei Fronten kämpfen: Durch geschickte Diplomatie gelingt es ihm, den russischen Zaren davon zu überzeugen, an der Seite Englands gegen Frankreich in den Krieg zu ziehen. Als aber Riga von Napoleons Truppen belagert

wird und es zur unerbittlichen Schlacht kommt, ist es für Hornblower alles andere als sicher, ob auf das Wort des Zaren Verlass ist. Der achte Band der berühmten Romanserie um Horatio Hornblower, einem Meilenstein der maritimen Literatur, ist ein großes Seeabenteuer und ein Lesevergnügen, das bereits Generationen von Lesern begeistert hat.

Nautische Tafeln S. Fischer Verlag

This famous set of mathematical tables was first published in 1803. It has been a bestseller ever since, and despite developments in electronic navigation it remains an essential requirement for anyone learning and practising astro-navigation. Last updated in 1994, the editor, George Blance, has worked for some time on the modernisation of all the tables for this major new edition. New tables have been included and obsolete ones deleted to conform with the changing techniques of navigation, with the aim of improving the accuracy of the calculated position and reducing the tedium of the calculation. All the tables required for coastal and deep sea navigation are included. A simple uniform method of interpolation for all the trigonometrical tables is used. Certain tables and data are also included which are not readily available on board ship or are only used in the examination room. The section 'Seaports of the World' has also been extensively updated and restructured with several hundred additional ports. The ports are listed geographically in the following order from Arctic Russia, Scandinavia, the Baltic Sea, the Atlantic coast of Europe, the Mediterranean Sea, West Africa, East Africa, Arabia, the Persian Gulf, the Indian sub-continent, the Far East, Australasia, the west coast of North and South America and finally the east coast of North and South America. At the back of the section is an index of the seaports.

Norie's Nautical Tables is the essential requirement for anyone learning and practicing astronavigation. Since J W Norie published the first edition of his Complete Set of Nautical Tables and Epitome of Practical Navigation in 1803, many changes to the tables have been necessary in both content and presentation. New tables have been included, obsolete ones deleted to conform with changing techniques of navigation, with the aim of improving

the accuracy of the calculated position and reducing the tedium of the calculation. Since the commissioning of the Global Navigation Satellite System (GNSS), its proven accuracy and reliability in all weather conditions have resulted in confidence and almost unquestioning dependence on its ability to provide a vessel's position, course and speed. Its use is widespread but the marine environment is a hostile one and failure of electronic equipment or of the system itself is a possibility. No prudent seafarer would proceed on an ocean passage without a reliable navigational back-up. The Explanation is in the form of a detailed step-by-step description, by means of worked examples, of the different methods of performing navigational calculations using a scientific calculator and/or the tables. A number of esteemed editors have worked on Norie's Nautical Tables over the years and this edition includes new contributions from François Hugo. This edition now presents formulae in an appropriate format for direct entry to a scientific calculator. Because the possibility of navigation without even an appropriate calculator exists, the logarithms have been retained. • All the tables required for coastal and deep sea navigation are included • A simple uniform method of interpolation for all the trigonometrical tables is used • Certain tables and data are also included which are not readily available on board ship or are only used in the examination room.
