ESEA phase-locked loop or phase lock loop (PLL) is a control system that generates an output signal whose phase is related to the phase of an input signal. There are several different types; the simplest is an electronic circuit consisting of a variable frequency oscillator and a phase detector in a feedback loop. The oscillator generates a periodic signal, and the phase detector compares the ...

CIRCUITS LABORATORY EXPERIMENT 1 Procedure. Note: This circuit was designed when we were just learning how to teach transistor function. Wiser now, we know there are some errors below in the math with the filter calculations. We will redesign this circuit when time and resources permit, but note that the circuit still works (can amplify spikes).
