The mechanization of medicine has submerged, its humanism. The physician no longer ministers to a distinctive person but concern himself with a particular malfunctioning organ. The distressed patient is frequently forgotten

or relegated to the background. A thought process is essential for discussing and understanding a symptom. This book, for the first time brings the doctor to the bedside of the patient for history, clinical examination, investigation, and finally the diagnosis. This book discusses the art of medicine in a simple dialogue style- between the patient and the doctor- and shows through bedside teaching, the treatment of an illness or a disease, rather than the patient. This illustrated volume containing twenty case studies sensitizes the reader to look a patient holistically, not just the body, but mind and emotions too. This unique volume teaches medicinal science as an art of healing, where modern medicine is not just restricted to science and technology.

Named one of the Best Books of the Year by Kirkus Reviews and BookPage
"Illuminates human fragility in tales both

lyrical and soul-wrenching.” —Danielle Ofri, New York Times Book Review In this “artful, unfailingly human, and understandable” (Boston Globe) account inspired by his own experiences becoming a doctor, Terrence Holt puts readers on the front lines of the harrowing crucible of a medical residency. A medical classic in the making, hailed by critics as capturing “the feelings of a young doctor’s three-year hospital residency . . . better than anything else I have ever read” (Susan Okie, Washington Post), Holt brings a writer’s touch and a doctor’s eye to nine unforgettable stories where the intricacies of modern medicine confront the mysteries of the human spirit. *Internal Medicine* captures the “stark moments of success and failure, pride

and shame, courage and cowardice, self-reflection and obtuse blindness that mark the years of clinical training” (Jerome Groopman, New York Review of Books), portraying not only a doctor’s struggle with sickness and suffering but also the fears and frailties each of us—doctor and patient—bring to the bedside.

Drs. Robert Wachter and Lee Goldman coined the term hospitalist in their New England Journal of Medicine article in 1996. Hospital Medicine is now the fastest growing medical specialty in the United States, due in part to the evolution of inpatient care. In this issue, the Guest Editor, Dr. Nancy Spector, and Consulting Editor Dr. Bonita Stanton, have assembled expert authors to examine the changing nature of inpatient care, including the major movements and trends that have influenced hospital-based practice, patient centered care, and education in

this clinical learning environment. Articles are focused on the following: Quality of Care and Quality Improvement; Evidence-based Medicine; Patient Outcomes and Metrics; Inter-professional Teams; Handoffs; Patient Centeredness; Communication with Patients; Health Literacy; Bedside Rounds; Education in the Inpatient; Clinical Learning Environment and Workplace-based Assessment; Simulation in Medical Education; Feedback; Bedside Teaching and Learning; and Hospital Medicine: State of the Specialty, Looking Forward. The intended audience for this issue are frontline providers that provide care in community hospitals and faculty in academic medical centers. Pediatricians will come away with the information they

need to improve patient outcomes with evidentiary support.
