 Crush siloes by connecting teams, data, and technologies with a new systems-based approach to growth. Growing a business in the 21st Century has become a capital intensive and data-driven team sport. In *Revenue Operations: A New Way to Align Sales and Marketing, Monetize Data, and Ignite Growth*, an accomplished team of practitioners, academics, and experts provide a proven system for aligning revenue teams and unlocking growth. The book shows everyone how to connect the dots across an increasingly complex technology ecosystem to simplify selling and accelerate revenue expansion. With *Revenue Operations*, you'll understand what it takes to successfully transition to the new system of growth without killing your existing business. This practical and executable approach can be used by virtually any business - large or small, regardless of history or industry - that wants to generate more growth and value. By reading this

book you will find: Real-world case studies and personal experiences from executives across an array of high technology, commercial, industrial, services, consumer, and cloud-based businesses. The six core elements of a system for managing your commercial operations, digital selling infrastructure, and customer data assets. Nine building-blocks that connect the dots across your sales and marketing technology ecosystem to generate more consistent growth and a better customer experience at lower costs. The skills and tools that next generation growth leaders will need to chart the roadmap for a successful career in any growth discipline for the next 25 years. An indispensable resource for anyone who wants to get more from their business - board members, CEOs, business unit leaders, strategists, thought leaders, analysts, operations professionals, partners, and front-line doers in sales, marketing, and service - *Revenue Operations* is based on over one thousand surveys of and interviews with business professionals conducted during 2020 and 2021. It also includes a comprehensive analysis of the sales and marketing technology landscape. As a perfectly balanced combination of academic insight and data-driven application, this book belongs on the bookshelves of anyone responsible for driving revenue and growth.

Quantitative Marketing and Marketing Management SAGE Publications

This advanced dictionary of marketing focuses on leading-edge terminology for use by people who are serious about the theory and practice of marketing. With over 1,000 entries ranging in length and depth, it is the ideal reference guide for researchers, directors, managers, and anyone studying marketing for a professional or academic qualification.

Handbook of Marketing Routledge

From 1976 to the beginning of the millennium—covering the quarter-century life span of this book and its predecessor—something remarkable has happened to market response research: it has become practice. Academics who teach in professional fields, like we do, dream of such things. Imagine the satisfaction of knowing that your work has been incorporated into the decision-making routine of brand managers, that category management relies on techniques you developed, that marketing management believes in something you struggled to establish in their minds. It's not just us that we are talking about. This pride must be shared by all of the researchers who pioneered the simple concept that the determinants of sales could be found if someone just looked for them. Of course, economists had always studied demand. But the project of extending demand

analysis would fall to marketing researchers, now called marketing scientists for good reason, who saw that in reality the marketing mix was more than price; it was advertising, sales force effort, distribution, promotion, and every other decision variable that potentially affected sales. The bibliography of this book supports the notion that the academic research in marketing led the way. The journey was difficult, sometimes halting, but ultimately market response research advanced and then insinuated itself into the fabric of modern management.

Addressing the immensely important topic of research credibility, Raymond Hubbard's groundbreaking work proposes that we must treat such information with a healthy dose of skepticism. This book argues that the dominant model of knowledge procurement subscribed to in these areas—the significant difference paradigm—is philosophically suspect, methodologically impaired, and statistically broken. Hubbard introduces a more accurate, alternative framework—the significant sameness paradigm—for developing scientific knowledge. The majority of the book comprises a head-to-head comparison of the "significant difference" versus "significant sameness" conceptions of science across philosophical, methodological, and statistical perspectives.

JOURNAL OF Econometrics Routledge

Review of Marketing Research is a publication covering the important areas of marketing research with a more comprehensive state-of-the-art orientation. The chapters in this publication review the literature, offer a critical commentary, develop an innovative framework and discuss future developments, as well as present specific empirical studies.

Building Models for Marketing Decisions Bloomsbury Publishing

This volume presents advanced techniques to modeling markets, with a wide spectrum of topics, including advanced individual demand models, time series analysis, state space models, spatial models, structural models, mediation, models that specify competition and diffusion models. It is intended as a follow-on and companion to *Modeling Markets* (2015), in which the authors presented the basics of modeling markets along the classical steps of the model building process: specification, data collection, estimation, validation and implementation. This volume builds on the concepts presented in *Modeling Markets* with an emphasis on advanced methods that are used to specify, estimate and validate marketing models, including structural equation models, partial least squares, mixture models, and hidden Markov models, as well as generalized methods of moments, Bayesian analysis, non/semi-parametric estimation and endogeneity issues. Specific attention is given to big data. The market environment is changing rapidly and constantly. Models that provide information about the sensitivity of market behavior to marketing activities such as advertising, pricing, promotions and distribution are now routinely used by managers for the identification of changes in marketing programs that can improve brand performance. In today's environment of information overload, the challenge is to make sense of the data that is being provided globally, in real time, from thousands of sources. Although marketing models are now widely accepted, the quality of the marketing decisions is critically dependent upon the quality of the models on which those decisions are based. This volume provides an authoritative and comprehensive review, with each chapter including: · an introduction to the method/methodology · a numerical example/application in marketing · references to other marketing applications · suggestions about software. Featuring contributions from top authors in the field, this volume will explore current and future aspects of modeling markets, providing relevant and timely research and techniques to scientists, researchers, students, academics and practitioners in marketing, management and economics.

With profound changes in the marketing landscape, the question for researchers and marketers is: What are enduring insights about consumer judgments and behavior? *Consumer Insights: Findings from Behavioral Research*, edited by Joseph Alba of University of Florida, offers a collection of findings on a broad range of consumer behavior phenomena, from variety seeking and brand recall to price biases and the effects of package size on consumption. Each of 42 entries, contributed by behavioral scientists, includes a generalizable consumer insight or insights, description of evidence base, managerial implications, and selected references. *Consumer Insights: Findings from Behavioral Research* is intended as supplementary reading for undergraduate and MBA courses and a reference resource for academics and marketing practitioners.

Empirical Generalizations about Marketing Impact, 2nd Edition Springer

This book was first published in 2004. Developments in strategic thinking and econometric

methods, alongside fundamental changes in technology and in the nature of competition, argue the need for an in-depth but accessible assessment of the Profit Impact of Marketing Strategy's project. Here, Paul Farris and Michael Moore gather together contributions from experts across the US and Europe to offer a retrospective analysis alongside innovative perspectives on future marketing strategy and performance assessment methods. Appealing to scholars and reflective practitioners interested in fostering practical knowledge about business innovation and changes, this book not only explores ways of thinking about and working with PIMS but also explores the unresolved issues arising from the original data. As the business community renews its attempts to recreate the kind of inter-firm cooperation that produced the PIMS project, sharing many of the ideals, this volume will broadly appeal.

Concepts and Methods Springer Science & Business Media

Why do consumers pay a premium price for a brand? Is it better quality, the look and feel, or is it the brand's social standing? Author Nigel Hollis believes the answer to all those questions is "yes." Yet the vast majority of brands today trade on past equity and transient buzz. And marketers focus on plan execution rather than creating meaningful differentiation rooted in the brand experience. This lack of meaning is creating a market full of commodities rather than products that instill loyalty. But loyalty (i.e., repeat business) is the key to long term success, and that requires focusing on meaningful differentiation: functional, emotional, or societal. Here, brand expert Nigel Hollis focuses on the four components of a meaningfully different brand: purpose, delivery, resonance, and difference. This unique model will be applied to two very different brand models: premium priced and value priced. The models will show readers how to amplify what their brand stands for across all the brand touch points including: findability, affordability, credibility, vitality, and extendibility. The book will include cases of global brands such as Dyson, Johnnie Walker, Geico, Volkswagen, and more.

The field of marketing science has a rich history of modeling marketing phenomena using the disciplines of economics, statistics, operations research, and other related fields. Since it is roughly 50 years from its origins, *The History of Marketing Science* is a timely review of the accomplishments of marketing scientists in a number of research areas. Different research areas of marketing science, such as Pricing, Internet Marketing, Diffusion Models, and Advertising, are treated to a highly readable and easy-to-digest historical analysis by the contributing authors. Each chapter provides a chronological timeline of key historical developments in the area of marketing science covered. Readers of other disciplinary backgrounds outside of economics, statistics, and operations research will be more than able to appreciate the development of

marketing science as a field of research and its pioneers through the book. Contents: The History of Marketing Science: Beginnings (Scott A Neslin and Russell S Winer) Methods: Brand Choice Models (Gary J Russell) Conjoint Analysis (Vithala R Rao) Innovation Diffusion (Eitan Muller) Econometric Models (Dominique M Hanssens) Market Structure Research (Steven M Shugan) Stochastic Models of Buyer Behavior (Peter S Fader, Bruce G S Hardie and Subrata Sen) Management: Advertising Effectiveness (Gerard J Tellis) Branding and Brand Equity Models (Tulin Edem and Joffre Swait) Distribution Channels (Richard Staelin and Eunhyu Lee) Customer Relationship Management (CRM) (Scott A Neslin) Digital and Internet Marketing (Wendy W Moe and David A Schweidel) New Products Research (Donald R Lehmann and Peter N Golder) Organizational Buying Behavior (Gary L Lilien) Pricing (Russell S Winer) Sales Force Productivity Models (Murali K Mantrala) Sales Promotions (Kusum L. As with executives and managers in so many other business functions, pricing specialists are being challenged more and more to substantiate the added value of their activities. Pricing is a core function of every business, and needs not only to contribute positively to short- and long-term results, but also to document its impact to the bottom line. A fundamental part of this is the pricing ROI calculations. This book, edited by globally renowned thought leaders Andreas Hinterhuber and Stephan Liozu, is the first to outline contemporary theories and best practices of documenting pricing ROI. It provides proven methods, practices and theories on how to calculate the impact of pricing activities on performance. Marketing ROI is now a common concept: this collection proves to do the same for pricing. Hinterhuber & Liozu introduce the concept of pricing ROI, documenting and quantifying the return on pricing activities and on the pricing function itself is of increasing relevance today and in the future – in times of budget constraints. 20 world class specialists explore the concept of pricing ROI under both a theoretical perspective and a managerial perspective to shed much-needed light on how to measure and increase pricing ROI. This groundbreaking book will enlighten students and specialists of marketing and sales, pricing managers and executives alike.

Marketing Science contributes significantly to the development and validation of analytical tools with a wide range of applications in business, public policy and litigation support. The *Handbook of Marketing Analytics* showcases the analytical methods used in marketing and their high-impact real-life applications. Fourteen chapters provide an overview of specific marketing analytic methods in some technical detail and 22 case studies present thorough examples of the use of each method in marketing management, public policy, and litigation support. All contributing authors are recognized authorities in their area of specialty.

NEW IN PAPERBACK 'The Handbook of Marketing is different... that Barton Weitz and Robin Wensley are its editors should suggest something out of the ordinary. A glance at the contributors (e.g., Wilkie, Webster, Day, Shocker, Keller, Hauser, Winer, Stewart, Parasuraman, Zeithaml) puts the matter to rest. The Handbook is an extraordinary effort. The blurb on the dust jacket is an understatement—the "Handbook will be invaluable to advanced undergraduates, graduate students, academics, and thoughtful practitioners in marketing"—the book is far more than that..... in short, the Handbook is probably invaluable to all academic researchers' - *Journal of Marketing* 'Handbook of Marketing is a rich compilation of thorough reviews in the field of marketing management. The editors have selected premier marketing scholars and have given them the opportunity to examine their area of expertise in a format much less confining than those provided by the major journals in

the field. The authors have taken this opportunity and have done an outstanding job not only of reviewing and structuring the extensive body of thought in many major areas of marketing management but also of providing valuable suggestions for further research. They have brought together major contributions from the field of marketing and from other related disciplines. I strongly encourage marketing scholars to consider Handbook of Marketing. The text will certainly appeal to those with interests in marketing management; it may also be useful to those who are more focused on methodological issues but interested in topics that need additional, rigorous investigation.... In summary, Weitz and Wensley should be congratulated for the excellent work in developing Handbook of Marketing. The book fills a major void in the marketing literature on marketing management and will serve the discipline for many years to come' - Journal of Marketing Research This text achieves the rare goal of covering marketing clearly and deeply, with no unnecessary examples or pretty pictures. For the enquiring mind, it is a wonderful link between a basic knowledge of marketing concepts and a grasp of where research in marketing is taking us' - Ken Simmonds, Emeritus Professor of Marketing and International Business, London Business School The Handbook of Marketing presents a major retrospective and prospective overview of the field of marketing, and provides a landmark reference at a time when many of the traditional boundaries and domains within the marketing discipline have been subject to change. - A high calibre collection compiled by an international and extremely distinguished advisory board of marketing academics - With contributions from leading scholars in the field, each covering the latest research issues in particular areas of expertise - Each chapter provides the necessary background for study and research of specific empirical and theoretical topics in marketing. The Handbook of Marketing will be invaluable to advanced undergraduates, graduate students and academics in marketing. With more and more research conducted in marketing and consumer behaviour fields, and technological advances and applications occurring on a regular basis, the future of marketing opens up a world of exciting opportunities. Going beyond a state-of-the-art view of the discipline, this innovative volume focuses on the advances being made in many different areas such as; critical thinking, new paradigms, novel conceptualisations, as well as key technological innovations with a direct impact on the theory and practice of marketing. Each chapter presents an expert overview, and an analytical and engaging discussion of the topic, as well as introducing a specific research agenda paving the way for the future. The Routledge Companion to the Future of Marketing provides the reader with a comprehensive set of visionary insights into the future of marketing. This prestigious collection aims to challenge the mindset of marketing scholars, transforming current thinking into new perspectives and advances in marketing knowledge. Foreword Wayne S. DeSarbo, Smeal College of Business, Pennsylvania State University, USA "The Future of Marketing" presents 22 different chapters written by some of the top scholars in the field of Marketing. These 22 chapters are organized into four topical areas: (1) New paradigms and philosophical insights (Chapters 1-5), (2) Contributions from other scientific fields (Chapters 6-9), (3) Reconnecting with consumers and markets (Chapters 10-17), and (4) New methodological insights in scholarly research in the field (Chapters 18-22). Thus, there are a number of diverse areas treated here ranging from futuristic managerial philosophies to state of the art qualitative and quantitative methodologies applicable to the various types of Marketing problems to be faced in the future. There are a number of

implicit guidelines (and future research areas and needs) that can be gleaned for (quantitative) modelers in terms of the issues and considerations that their constructed models should explicitly accommodate in future empirical endeavors: Heterogeneity When modeling consumer perceptions, preferences, utility structures, choices, etc., it is important to avoid potential masking issues that aggregate models are subject to in many cases. In the simple case, consider a regression scenario where there are two equal sized segments whose utility functions (as a function of price) are opposite reflections of each other. Aggregating the sample in one large analysis yields a non-significant price elasticity coefficient, whereas estimating separate utility functions by segment displays the true structure in the data. While latent structure and hierarchical Bayesian methods have been developed for disaggregate analyses, a number of methodological issues exist with such existent approaches that provide fertile ground for future research. Competition Many quantitative models are estimated at a brand level and reflect only the efforts of that sole brand. For example, in many customer satisfaction studies, attention is often paid to the consumers of a particular client brand or service in an effort to portray their performance and derive the important drivers of satisfaction. Financial optimization models are then often constructed to examine where a company should invest its resources to best improve sales, retention, word of mouth, loyalty, etc. These studies need to occur in a fully competitive setting where one derives a full picture of the competitive market place. Managers need to know the relative importance of the drivers of satisfaction for their brand/service as well as for their competitors. In addition, knowledge of the relative performance of their brand relative to competitors is necessary information for strategy formation. Ideally, one would hope to see modeling efforts which also examine cross effects in terms of how Brand A's policy affects other brands. Over time, competitive dynamics are also important as discussed next. Dynamics As seen in the various chapters, this can assume many different manifestations. Related to the previous category above related to competition, it is often necessary to examine competitive dynamics as opposed to comparative statics where the modeler of the future examines simultaneous and/or sequential optimization by each of the competitors in a market place in a game theoretic context. In such a manner, it will not be the case that all competitors end up enacting the same exact identical strategies. Alternatively, the models of the future should be adaptive and have the ability to "learn" from past data, as well as benefit from informed managerial expert input and constraints. Parameter values that change/adapt during the duration of the data are also a desirable feature. Non-Linearity Traditional linear response functions do not typically yield realistic normative managerial guidelines or optimized solutions. End point solutions that suggest "all or none" types of resource allocations are useless in most realistic Marketing applications. A large amount of work is required in this area as Marketing often lacks the strong theory necessary to provide such insight regarding the models that are constructed. In addition, multiple objective functions need to be accommodated with the use of multicriterion optimization methods Endogeneity Often times, there are hidden effects embedded in the various independent variables the Marketer believes are exogenous and truly independent. These may be due to effect of lagged variables, managerial decision making practice, etc. To ignore such effects, threatens the integrity of the models Marketers construct. For example, in traditional regression models, such endogeneity often produces a correlation between the independent variable in question and the error term, often resulting in biased estimates when employing ordinary least-squares estimation. Moderation/Mediation There are times particularly in regression approaches where the relationships between two variables are affected by values of a third variable. In such cases, we need to employ selected interaction effects to measure such moderated effects. Interaction effects are often needed to model the synergistic or catalytic effects of various independent variables. Alternatively, in a mediation regression model, rather than hypothesizing a direct causal relationship between the independent variable and the dependent variable, a mediational model hypothesizes that the independent variable influences the mediator variable, which in turn influences the dependent variable. Thus, such moderator and mediator variables serve to clarify the nature of the relationship between the independent and dependent variables. Marketers need to be aware of such potential inter-relationships. Models Guided by Theory Ideally, the models we construct should be more than just data analytic structures which approximate the relationships found in the data. Where possible, models should be constructed on

the basis of available sound Marketing theory describing the process being modeled. One of the advantages of structural equation models is that one can utilize such a methodology to test and implement some a priori theory describing the relationship or causal nature of various inter-related constructs. This feature has been lacking in the general modeling efforts to date. A major reason for this is due to the lack of adequate theory development for most of the processes encountered in Marketing. For example, we have no solid Marketing theory regarding the structure of marketing mix response models. Thus progress must be advanced in such areas so that the models we construct are more robust and explainable. I wish to personally thank the co-editors and various authors of the "Future of Marketing" for opening the door to get a glimpse of the future in the field of Marketing. The hope is that this new book will provide fresh ideas to guide future research to improve the field of Marketing and define the next generation of research efforts as the torch gets passed to future generations.

In our increasingly digital, mobile, and global world, the existing theories of business and economics have lost much of their appeal with the phenomenal rise of Chindia, the reality of Brexit, the turmoil caused by the Covid-19 pandemic, and the seismic shifting of the global center of gravity from west to east. In the area of innovation, the traditional thinking that a developed country, often the US, will come up with the next major innovation, launch at home first, and then take it to other markets does not ring true anymore. Similarly, the world where conglomerates go bargain-hunting for acquisitions in emerging markets has been turned upside-down. This book reveals and illustrates the Global Rule of Three phenomenon, which stipulates that in competitive markets only three companies (which the authors call "generalists") can dominate the market. All other players in the market are specialists. Further, whereas the financial performance of generalists improves as market share increases, specialist companies see a decrease in financial performance as their market share increases, as the latter are margin-driven companies. This theory powerfully captures the evolution of global markets and what executives must do to succeed. It is based on empirical analyses of hundreds of markets and industries in the US and globally. Competitive markets evolve in a predictable fashion across industries and geographies, where every industry goes through a similar lifecycle from beginning to end (or revitalization). From local to regional to national markets, the last stop in the evolution of markets is going global. The pattern is so consistent that it represents a distinct and natural market structure at every level. The authors offer strategies that generalists and specialist should follow to stay competitive as well as twelve expansion strategies for global companies from emerging markets. This book chronicles this global evolution and provides impactful managerial implications for executives and students of marketing and corporate strategy alike.

The Second Edition of this book presents the state of the art in this important field. Marketing decision models constitute a core component of the marketing discipline and the area is changing rapidly, not only due to fundamental advances in methodology and model building, but also because of the recent developments in information technology, the Internet and social media. This Handbook contains eighteen chapters that cover the most recent developments of marketing decision models in different domains of marketing. Compared to the previous edition, thirteen chapters are entirely new, while the remaining chapters represent complete updates and extensions of the previous edition. This new edition of the Handbook has chapters on models for substantive marketing problems, such as customer relationship management, customer loyalty management, website design, Internet advertising, social media, and social networks. In addition, it contains chapters on recent methodological developments that are gaining popularity in the area of marketing decision models, such as structural modeling, learning dynamics, choice modeling, eye-tracking and measurement. The introductory chapter discusses the main developments of the last decade and discusses perspectives for future developments.
