Artificial Intelligence continues to be one of the most exciting and fast-developing fields of computer science. This book presents the 177 long papers and 123 short papers accepted for ECAI 2016, the latest edition of the biennial European Conference on Artificial Intelligence, Europe's premier venue for presenting scientific results in AI. The conference was held in The Hague, the Netherlands, from August 29 to September 2, 2016. ECAI 2016 also incorporated the conference on Prestigious Applications of Intelligent Systems

(PAIS) 2016, and the Starting AI Researcher Symposium (STAIRS). The papers from PAIS are included in this volume; the papers from STAIRS are published in a separate volume in the Frontiers in Artificial Intelligence and Applications (FAIA) series. Organized by the European Association for Artificial Intelligence (EurAI) and the Benelux Association for Artificial Intelligence (BNVKI), the ECAI conference provides an opportunity for researchers to present and hear about the very best research in contemporary AI. This proceedings will be of interest to all those seeking an overview of the very latest innovations and developments in this field.

Making social democrats Bloomsbury Publishing

The mainstream press often celebrates the 'tweeting', 'facebooking' and 'gramming' of art commentary. Yet online forms of art criticism have a much longer and more varied history than we think. Far preceding the art discussions happening on the likes of Twitter and Facebook. Before art discussions took place on social media, there were networked art projects and art critical Bulletin Board Systems, email discussion lists and blogs. Art Criticism Online: A History provides the first in-depth history of art criticism following the Internet. The book considers the core stages of development

and considers where critical practice is heading in the future. Charlotte Frost's Art Criticism Online provides a much needed account and indispensable survey of the ways in which Western art criticism has been profoundly affected and changed by the online environment. Building on the history of networked and participatory criticism predating the Internet, Frost traces three different phases of online art criticism unfolding in early discussion groups, on listservs, and within today's blogosphere and social media platforms. The book expertly captures nuanced transformations in art criticism's content, form and style,

analyzing how approaches have shifted in response to the evolution of the art world terrain. Art Criticism Online successfully manages to provide readers with a map of the dynamic expressions of today's critical culture. --Christiane Paul, Adjunct Curator of Digital Art, Whitney Museum, Director/Chief Curator, Sheila C. Johnson Design Center, Parsons/The New School So what happened to art criticism, anyway? This lively history is a vital resource for anyone interested in this question. Drawing on a half-century of examples, the book discusses the new, experimental writing practices the internet has made possible, and its destructive effects,

making a persuasive case that art criticism hasn't gone away it's just changed radically. --Michael Connor, Artistic Director, Rhizome

Imagining New Europe
Springer

British Literature and the European Project

Frontiers Media SA
Eastern Europeans in Contemporary Literature and Culture: Imagining New Europe provides a comprehensive study of the way in which contemporary writers, filmmakers, and the media have represented the recent phenomenon of Eastern European migration to the UK

and Western Europe following the enlargement of the EU in the 21st century, the social and political changes after the fall of communism, and the Brexit vote.

Exploring the recurring figures of Eastern Europeans as a new reservoir of cheap labour, the author engages with a wide range of both mainstream and neglected authors, films, and programmes, including Rose Tremain, John Lanchester, Marina Lewycka, Polly Courtney, Dubravka Ugrešić, Kapka Kassabova, Kwame Kwei-Armah, Mike Phillips, *It's a Free World*, *Gypo*, *Britain's Hardest Workers*, *The Poles are Coming*, and *Czech Dream*. Analyzing the

treatment of Eastern Europeans as builders, fruit pickers, nannies, and victims of sex trafficking, and ways of resisting the stereotypes, this is an important intervention into debates about Europe, migration, and postcommunist transition to capitalism, as represented in multiple contemporary cultural texts.

The Biography of Bishop Mark Dyer

The Raven Review
Sacred Art - A Hollow Bone for Spirit: Where Art Meets Shamanism tells the story of sacred art across cultures, continents and historical periods and makes a plea for sacred art to once again take its rightful place in our perception. Making sacred art means stepping outside the

realm of ego-led consciousness to become a hollow bone for spirit so art becomes a mystery school process. When we connect to Divine forces greater than ourselves, creative blocks do not exist and healing occurs naturally. The greatest piece of art we will ever make is our own life!

The Dynamics of Fashion MDPI

From the streets of Calais to the borders of Melilla, Evros and the United States, the slogan 'No borders!' is a thread connecting a multitude of different struggles for the freedom to move and to stay. But what does it mean to make this slogan a reality? Drawing on the author's extensive research in Greece and

Calais, as well as a decade campaigning for migrant rights, Natasha King explores the different forms of activism that have emerged in the struggle against border controls, and the dilemmas these activists face in translating their principles into practice. Wide-ranging and interdisciplinary, *No Borders* constitutes vital reading for anyone interested in how we make radical alternatives to the state a genuine possibility for our times, and raises crucial questions on the nature of resistance.

The Politics of Immigration Control and Resistance Kings Road Publishing
Britain's vote to leave the European Union in

the summer of 2016 came as a shock to many observers. But writers had long been exploring anxieties and fractures in British society – from Euroscepticism, to immigration, to devolution, to post-truth narratives – that came to the fore in the Brexit campaign and its aftermath. Reading these tensions back into contemporary British writing, Kristian Shaw coins the term *Brexlit* to deliver the first in-depth study of how writers engaged with these issues before and after the referendum result. Examining the work of over a hundred British authors, including Julian Barnes, Jonathan Coe, Kazuo Ishiguro, and Ali Smith, as well as popular fiction by Andrew Marr and

Stanley Johnson, *Brexlit* explores how a new and urgent genre of post-Brexit fiction is beginning to emerge. *Where Art Meets Shamanism*
Manchester University Press
Gilles de la Tourette Syndrome (TS) is a common, albeit severely under-diagnosed, neuropsychiatric disorder that is caused by a complex genetic basis, interacting with environmental factors. High comorbidity rates with other neurodevelopmental disorders such as attention deficit/hyperactivity disorder and obsessive compulsive disorder raise the intriguing hypothesis of a shared etiological background. Abnormalities of corticostriatal-

thalamic-cortical circuits (CSTC) and dysfunction of both dopamine and serotonin neurotransmitter systems are assumed to be associated with TS. Recently, multiple lines of evidence also point towards an important role of additional neurotransmitters such as histamine and glutamate. For a very long time, efforts to elucidate the etiology and pathophysiology of TS have been fragmented and hampered by low statistical power. Finally, after more than two decades of active research aiming to identify the etiology and pathophysiology of TS, we are on the verge of a new era, promising exciting and rapid discoveries in the

field. Investigators from around the world, representing multiple disciplines and scientific approaches, are joining their efforts in large-scale initiatives supported both by European Union and US National funding agencies, such as the European-funded EMTICS, TACTICS, and TSGeneSEE consortia, the Marie Curie Initial Training Network TS-EUROTRAIN and the European Society for the Study of TS joining forces with the NIH-funded TSAICG, GGRI, and Tic Genetics consortia. Importantly, all these initiatives are supported by TS patient support and advocacy groups. Multiple resources are being consolidated and coming together to serve the study of TS,

including large well-characterized patient cohorts, and specialized epidemiological databases, such as the unique resource of the Netherlands Twin Register. This research topic showcases current large-scale collaborative efforts aiming to elucidate the genetic and neurobiological background of TS, through diverse approaches; from genomewide association studies aiming to identify common variants associated to the disorder to neuroimaging studies and animal models. Furthermore, current approaches on the clinical assessment and management of the disorder are presented. Propelled

by the gradual availability of large scale TS cohorts, novel methodologies, and importantly, sheer enthusiasm by multiple researchers working together across different countries, the new era of the neurobiology of TS holds the promise to identify novel targets for improved therapies. *22nd European Conference on Artificial Intelligence, 29 August - 2 September 2016, The Hague, The Netherlands - Including Prestigious Applications of Artificial Intelligence (PAIS 2016)* Frontiers Media SA
 How can emerging technologies display, reveal and negotiate difficult, dissonant, negative or undesirable heritage?
 Emerging technologies

in museums have the potential to reveal unheard or silenced stories, challenge preconceptions, encourage emotional responses, introduce the unexpected, and overall provide alternative experiences. By examining varied theoretical approaches and case studies, authors demonstrate how “awkward”, contested, and rarely discussed subjects and stories are treated – or can be potentially treated - in a museum setting with the use of the latest technology. *Switched On* Eastern Europeans in Contemporary Literature and Culture Imagining New Europe A Sociology of Crime has an outstanding reputation for its

distinctive and systematic contribution to the criminological literature. Through detailed examples and analysis, it shows how crime is a product of processes of criminalisation constituted through the interactional and organizational use of language. In this welcome second edition, the book reviews and evaluates the current state of criminological theory from this “grammatical” perspective. It maintains and develops its critical and subversive stance but greatly widens its theoretical range, including dedicated chapters on gender, race, class and the post-als including postcolonialism. It now also provides

questions, exercises and further readings alongside its detailed analysis of a set of international examples, both classical and contemporary.

The Big Issue Presents... 100

Inspiring People on the Moments That Shaped Their Lives SAGE

This report focuses on how human development can be ensured for everyone, now and in future. It starts with an account of the hopes and challenges of today's world, envisioning where humanity wants to go. This vision draws from and builds on the 2030 Agenda and the Sustainable Development Goals. It explores who has been left behind in human development progress and why. It argues that to ensure that human

development reaches everyone, some aspects of the human development framework and assessment perspectives have to be brought to the fore. The Report also identifies the national policies and key strategies to ensure that will enable every human being achieve at least basic human development and to sustain and protect the gains.

Publications in this field have, in general, been based predominantly on the experiences of individual national settings. Migration, Health and Survival offers a comparative approach, bringing together leading international scholars

to provide original works from the United States, Canada, Australia, France, Germany, England and Wales, Norway, Belgium and Italy.

Essays for David Marquand Zed Books Ltd.

Introduction to Cinematography offers a practical, stage-by-stage guide to the creative and technical foundations of cinematography. Building from a skills-based approach focused on professional practice, cinematographer and author Tania Hoser provides a step-by-step introduction for both cinematographers and camera assistants to the techniques, processes, and procedures of working with cameras, lenses, and light. She provides

hands-on insight into negotiating with production constraints and understanding the essentials of the image workflow from shot to distribution, on projects of any scope and budget. Richly illustrated, the book incorporates exercises and sample scripts throughout, exploring light, color, movement, 'blocking', and pacing scenes. The principles and techniques of shaping and controlling light are applied to working with natural light, film lamps, and, as with all areas of cinematography, to low budget alternatives. This makes Introduction to Cinematography the perfect newcomer's guide to learning the skills of cinematography that enables seamless

progression from exercises through to full feature shoots. Assessment rubrics provide a framework to measure progress as the reader's ability to visually interpret scripts and enhance the director's vision develops. The book also teaches readers: To understand and develop the combination of skills and creativity involved in cinematography; Photographic principles and how they are applied to control focus exposure, motion blur, and image sharpness; To identify the roles and skills of each member of the camera department, and how and when each are required during a shoot; The order and process of lighting on all scales of productions and the

use and application of the four main types of lamps; How to use waveforms, false color, and zebras for monitoring light levels, and meters for guiding exposure choices; The principles of the color wheel, color palettes, and the psychological effects of color choices; How to shoot for different types of fiction and nonfiction/documentary films and how to apply these skills to other genres of TV and film production; Strategies for both starting and progressing your career within cinematography and the camera department. **Winner of 'Best new Textbook in Humanities and Media Arts' in the Taylor and Francis Editorial Awards

2018**

Indian Liberalism between Nation and Empire Gylphi Limited
Why is it getting harder to secure a job that matches our qualifications, buy a home of our own and achieve financial stability?
Underprivileged people have always faced barriers, but people from middle-income families are increasingly more likely to slide down the social scale than climb up. Duncan Exley, former Director of the Equality Trust, draws on expert research and real life experiences - including from an actor, a politician, a billionaire entrepreneur and a surgeon - to issue a wake-up call to break through segregated opportunity. He offers

a manifesto to reboot our prospects and benefit all.
Processes to Ensure Occupant Wellbeing and Minimise Disruptions Springer
Emerging from the protective environment of the uterus, the newborn is exposed to a myriad of microbes, and quickly establishes a complex microbiome that shapes the infant's biology in ways that are only now beginning to come to light. Among these exposures are a number of potential pathogens. The host responses to these pathogens in the neonatal period are unique, reflecting a developing immune system even with delivery at term. Preterm infants are delivered at a time when host defense

mechanisms are even less developed and therefore face additional risk. As such, the organisms that cause disease in this period are different from the pathogens that are common in other age groups, or the disease they cause manifests in more severe fashion. Developmental alterations in both innate and adaptive immune responses in neonates have been documented among many cell types and pathways over the last several decades. Contemporary insights into the human immune system and methodologies that allow an “omics” approach to these questions have continued to provide new information regarding the

mechanisms that underlie the human neonate as an “immunocompromised host.” This Research Topic highlights studies related to this unique host-pathogen interface. Contributions include those related to the innate or adaptive immune system of neonates, their response to microbial colonization or infection, and/or the pathogenesis of microbes causing disease in neonates.

Heritage, Historical Culture and Identity in Regions Undergoing Structural Economic Transformation
Routledge

At a time when the Humanities are under threat, this book offers a defense of poetry within the context of growing interest in mindfulness in

business, health care, and education. The book argues that the benefits and insights mindfulness provides are also cultivated by the study of poetry. These benefits include a focus on the present, the ability to see through scripts and habits, a rethinking of subjectivity, and the development of ecological or systems thinking. Bryan Walpert employs close readings of traditional and experimental poetry and draws on scientific studies of the effects of mindfulness or reading literature on the brain. It argues the skills that poetry, like mindfulness, cultivates are useful beyond the page or classroom and ultimately are necessary to engage with such global issues as the environmental

crisis.

Second edition

Routledge

No one goes to hospital
 to get sick. Hospitals
 are the places we seek
 treatment, to get
 better, have
 procedures, get
 vaccinated or visit an
 ailing friend or relative.
 And yet, once in
 hospital, as a patient or
 visitor alike, we can
 become susceptible to

an increased risk of
 infection from a most
 unlikely source;
 construction dust.
 Hospitals are under
 constant pressure to
 upgrade, embrace new
 technology, expand
 their aging facilities
 and attract more
 patients. This has
 resulted with
 construction and
 maintenance works
 becoming a mainstay
 in operational
 hospitals. And often,
 there will be several
 projects underway at
 the same time. Some
 will replace or repair
 aging infrastructure,
 others will implement
 new technologies,
 install specialised
 equipment or seek to
 enhance their patient
 facilities. And whilst
 hospitals modernise,
 they are required to
 remain operational and
 provide an ongoing,

consistent and safe patient care service. This mix, health care with construction works is risky as a lot can go wrong and a lot often does. So how should construction work in operational hospitals be undertaken to ensure the ongoing safety and wellbeing of patients and occupants alike. How can disruption be minimised? How can the complexity of the works be more effectively managed? Are there specific focus areas? What data is required to gauge compliance and performance? How can construction issues and problems be quickly identified, rectified and not repeated? And, as construction works proceeds, what is required to ensure no harm is caused? In

answering these questions, this book provides an insight into how construction risks can be effectively controlled whilst works are progressed, to be completed safely, without incident or disruption in operational hospitals. Interruption to a Journey Routledge This book addresses important questions and puzzles regarding the massification of higher education in Asia. It equips readers to critically evaluate and understand the consequences and challenges that massification entails, while also prompting policymakers and higher education administrators to tackle emerging issues related to the massification of higher education. Readers will

gain a deeper, nuanced understanding of this trend, including its impacts and governance issues.

Poetry and

Mindfulness Edward Elgar Publishing
Technology, at least in theory, is improving our productivity, efficiency, and communication. The one thing it's not doing is making us happier. We are experiencing historically high levels of depression and dissatisfaction. But we can change that. Knowing that technology is here to stay and will continue to evolve in form and function, we need to know how to navigate the future to achieve a better balance between technology, productivity, and well-being. Technology can drive—not

diminish—human happiness. In *The Future of Happiness*, author Amy Blankson, cofounder of the global positive psychology consulting firm GoodThink, unveils five strategies successful individuals can use, not just to survive—but actually thrive—in the Digital Age:

- Stay Grounded to focus your energy and increase productivity
- Know Thyself through app-driven data to strive toward your potential
- Train Your Brain to develop and sustain an optimistic mindset
- Create a Habitat for Happiness to maximize the spaces where you live, work, and learn
- Be a Conscious Innovator to help make the world a better place

By rethinking when, where, why, and how you use

technology, you will not only influence your own well-being but also help shape the future of your community. Discover how technologies can transform the idea of "I'll be happy when . . ." to being happy now.
