## HANEY DWAYNE

### 9 Hodder Education

The importance of investigating karstified aquifers lies in their significance as a major source of drinking water. This book describes methods that are basic to all hydrogeological studies, such as hydraulic investigations, hydrochemistry, geophysics, isotope chemistry and modelling, but with the emphasis placed on their application to karst systems. Other techniques are specific to the karst environment, such as the speleological exploration of aquifers and water tracing. The various chapters of this book are written by experts in different methods. Most of the chapters are multi-authored, and the authors include hydrogeologists who are experienced in evaluating a variety of karst environments and who together, provide a comprehensive review of karst methods.

### 5 Exploring Science 4

The book aims at presenting the topics of Bridge Engineering expressed in simple and

lucid language. The presentation is comprehensive and methodical as well as interesting and easy to follow.

### Longman Biology 11-14 (2009 Edition) Sterling Milestones

Comprising a pupil's book, teacher's guide and copymaster file for each year, this series covers all of the Sc1 to Sc4 requirements and incorporates the ideas and evidence statements of the revised National Curriculum (formerly part of Sc0). The course also supports the content and approach of the QCA Scheme of Work.

### Oxford International Primary Geography: Workbook 3 John Wiley & Sons

Comprising a pupil's book, teacher's guide and copymaster file for each year, this series covers all of the Sc1 to Sc4 requirements and incorporates the ideas and evidence statements of the revised National Curriculum (formerly part of Sc0). The course also supports the content and approach of the QCA Scheme of Work.

### Direct Interactive Teaching Hodder Education

"This book narrows down the scope of data mining

by adopting a heavily modeling-oriented perspective"--

Workbook Civitas/Inst for the Study of

Following QCA's new

Scheme of Work for

Primary Science, this

series takes a sequential development through the

primary curriculum for

science. The pupil books

concentrate on content and comprehension

questions; the

copymasters offer

classroom activities and

homework. The series

should sell equally well

overseas, because of its

accessibility and

emphasis on progression

from age 5 through to age

11.

### 8 Longman

Oxford International

Primary Geography is a

complete six year course

that provides an engaging

introduction to the

subject. Using real life

examples from around the

globe, the course covers

both human and physical

geography, from the

basics of mapping to

current hot topics such as

how to meet the resource

needs of the world's

population.

**Workbook 2 Good Food**  
The MEC/BC bilingual project, initiated in 1996 in primary as a unique experiment within the Spanish state education system, and in September 2004 the classes that had started their bilingual education 8 years earlier took the project forward into Secondary schools. The formal agreement between the MEC/BC states that the aim of the project is to provide students from the age of three to sixteen with a bilingual, bicultural education through an integrated Spanish/English curriculum based on the Spanish National Curriculum and aspects of the National Curriculum for England and Wales. The implantation of such a curriculum requires, firstly, with regard to English as a subject, a very different classroom approach from the traditional EFL classroom where the focus is on learning English as a foreign language; secondly, a similar new methodology for teaching and learning other curricular areas through English. Such an integrated approach sits very positively within the Directives of the Council

of Europe which insists on the need for students to be competent in three European languages by the end of the obligatory period of Secondary Education and that the learning of the first foreign language should begin in the early years of formal education. In addition to this, the secondary integrated curricula have consistently focused on the continuing development of students' skills and learning strategies, thus firmly establishing learning as a lifelong process. The specific objectives of the Project in the Secondary education level are to: continue the acquisition and learning of both languages through an integrated content-based curriculum, encourage awareness and understanding of the diversity of both cultures, facilitate the exchange of teachers and students, encourage the use of modern technologies in learning other languages, promote the certification of studies under both educational systems, if and when appropriate.

This book introduces readers to the lattice Boltzmann method (LBM) for solving transport phenomena – flow, heat and mass transfer – in a systematic way. Providing explanatory computer codes throughout the book, the author guides readers through many practical examples, such as:

- flow in isothermal and non-isothermal lid-

- driven cavities; • flow over obstacles; • forced flow through a heated channel; • conjugate forced convection; and • natural convection.

Diffusion and advection-diffusion equations are discussed, together with applications and examples, and complete computer codes accompany the sections on single and multi-relaxation-time methods. The codes are written in MatLab. However, the codes are written in a way that can be easily converted to other languages, such as FORTRANm Python, Julia, etc. The codes can also be extended with little effort to multi-phase and multi-physics, provided the physics of the respective problem are known. The second edition of this book adds new chapters, and includes new theory and applications. It discusses a wealth of practical examples, and explains LBM in connection with various engineering topics, especially the transport of mass, momentum, energy and molecular species. This book offers a useful and easy-to-follow guide for readers with some prior experience with advanced mathematics and physics, and will be of

interest to all researchers and other readers who wish to learn how to apply LBM to engineering and industrial problems. It can also be used as a textbook for advanced undergraduate or graduate courses on computational transport phenomena

Despite ongoing progress in nano- and biomaterial sciences, large scale bioprocessing of nanoparticles remains a great challenge, especially because of the difficulties in removing

unwanted elements during processing in food, pharmaceutical and feed industry at production level. This book presents magnetic nanoparticles and a novel technology for the upscaling of protein separation. The results come from the EU Project "MagPro2Life", which was conducted in cooperation of several european institutions and companies.

Andrew Loomis Longman  
In this volume, educationists and experts on values, including the Archbishop of Canterbury, discuss the question of values and the curriculum in societies which are changing rapidly and in which disagreements about values are sometimes acrimonious.
