Comprehensive, Rigorous
Prep for MCAT Chemistry
The MCAT Chemistry Book
presents a comprehensive
review of general
chemistry and organic
chemistry to prepare for
the Medical College
Admission Test. Part I
presents general

chemistry concepts, and
Part II presents organic
chemistry concepts. The
review sections are
written in a user-friendly
manner to simplify and
reduce the student's
burden when deciphering
difficult concepts. At the
end of each chapter,
practice questions are
included to test the
understanding of the key
concepts. Answers and
explanations for the
practice questions are
provided after the review
sections. Illustrations and
tables are included
wherever necessary to

focus and clarify key ideas
and concepts.

In this original text, prolific mathematics author Steven G. Krantz addresses conformal geometry, a subject that has occupied him for four

decades and for which he helped to develop some of the modern theory. This book takes readers with a basic grounding in complex variable theory to the forefront of some of the current approaches to the topic. "Along the way," the author notes in his Preface, "the reader will be exposed to some beautiful function theory and also some of the rudiments of geometry and analysis that make this subject so vibrant and lively." More up-to-date and accessible to advanced undergraduates

than most of the other books available in this specific field, the treatment discusses the history of this active and popular branch of mathematics as well as recent developments. Topics include the Riemann mapping theorem, invariant metrics, normal families, automorphism groups, the Schwarz lemma, harmonic measure, extremal length, analytic capacity, and invariant geometry. A helpful Bibliography and Index complete the text.
