PHARMACEUTICAL INDUSTRY DETAIL INFORMATION  
 Pharmaceutical Analysis Raw Material  
 Raw material analysis is used for: Pharmaceuticals Medical device Cosmetic industries. Raw Material Analysis for APIs and Excipients | Laboratory ... Hence, raw material analysis is essential to determine the purity, identity and quality of the raw materials before they go into the manufacturing process. Need for Raw Material Testing As hundreds of raw materials and ingredients are used in the process of formulating the final pharmaceutical product, it is quite tough to check every ingredient for quality. Pharmaceutical Raw Material Testing & Analysis | ARBRO  
 Pharmaceutical Analysis of raw materials and/or finished products  
 Pharmaceutical analysis is an integral partner to the drug development process. Medipharm Laboratories can perform a vast array of analyses on pharmaceutical products from a variety of compendiums to ensure that products are safe and effective. Pharmaceutical Analysis | Raw Material Analysis | Finished ... We offer full or partial monograph testing of Pharmaceutical Excipients, e.g. fillers, binders, coatings, disintegrants, antiadherents, etc. Pharmaceutical raw materials of all origins can be analysed, such as Animal Extracts, Herbal Raw Materials, and Pharmaceutical Additives. Compendial testing methods used are those of the BP, BPC, Ph. Pharmaceutical Raw Materials Analysis - Salamon & Seaber  
 USP provides monographs for the most commonly used raw materials in the pharmaceutical industry. Often these monographs detail several different analytical techniques. Karl Fischer moisture analysis, pH, viscosity and titrations are common but more complex techniques such as HPLC, GC-MS and ICP-MS are sometimes required. Raw Material testing for pharmaceuticals and biologics  
 For collection of reserve sample of raw material, collect the double quantity of required for one complete analysis. In case any microbiological test is also to be carried out in the sample, four times quantity of the material to be withdraw and keep in 4 different polybags (2 for chemical analysis and 2 for microbial analysis). SOP on Sampling of Raw Materials. - Pharmaceutical Guidelines  
 Standard Operating Procedure (SOP) for Sampling of Raw Material (API & Excipient) as per Schedule M and ICH Q7 (Good Manufacturing Practices Guideline). Raw Material sampling is the process of abstraction of a representative portion of material or a group of units from a larger quantity of material or collection of units. SOP for Sampling of Raw Material - Pharma Beginners  
 Pharmaceutical impurity analysis of raw materials & final product by using analytical techniques  
 The evaluation of pharmaceutical raw materials and finished products for impurities and degradation products is an essential part of the drug development and manufacturing testing process. Pharmaceutical impurity analysis of raw materials and ... In the pharmaceutical industry, two sampling strategies are typically used for raw material identity verification purposes, namely: Sampling of each container, N samples per lot  
 Sampling square root of the lot size plus one ( $\sqrt{N+1}$ ) containers where N is the number of containers

per lot. Raw material identity verification in the pharmaceutical ... Raw Materials Analysis  
 McCrone Associates offers numerous services for the identification of contamination particles. Often, the source of the particles can be traced to the raw materials used in the production of the product or the packaging used to store the material. Raw Materials Analysis & Testing | The McCrone Group  
 Pharmaceutical analysis is a branch of practical chemistry that involves a series of process for identification, determination, quantification and purification of a substance, separation of the components of a solution or mixture, or determination of structure of chemical compounds. The substance may be a single compound or a mixture of compounds and it may be in any of the dosage form. Pharma Analysis | PharmaTutor  
 GMP Pharmaceutical quality control (QC) testing programs for raw materials, APIs and intermediates to pharmacopoeia specifications supported by troubleshooting and specialist QC methods, delivered by experts. Quality control testing of pharmaceutical raw materials is critical to drug development from early-stage through to commercial batch release. cGMP Pharmaceutical Quality Control Testing  
 There are a few reasons that raw materials may not meet the required specifications for pharmaceutical manufacturing. Raw material testing ensures that the supplier has provided the correct material, and it also confirms that the integrity of the material hasn't been compromised during storage or shipment. Developing Raw Material Testing Programs as a CDMO ... Vaya Handheld Raman Spectrometer for Raw Material Identification. The Agilent Vaya handheld Raman spectrometer increases raw material identification throughput without increasing costs by reducing the need for sampling. From clear glass vials to brown paper sacks, Vaya offers best-in-class identification testing through transparent containers, and transformative handheld Raman identification through nontransparent containers—for the fastest possible release to manufacturing. Handheld Raman Spectrometer, Raw Material ID, Vaya | Agilent  
 Excipients are no more just an inert raw material used to formulate the active ingredient in a medicinal product: functional excipients have become a central key point in the development of innovative dosage forms in order to tune their properties. Raw materials. Risk assessment for excipients - Pharma World  
 Quality controls for raw materials and active ingredients comprise identity, purity and content testing and are carried out following the regulations of the Pharmacopoeia or according to the customer's own instructions. Quality Control of Pharmaceutical Raw Materials | UFAG ... The evaluation of pharmaceutical raw materials and finished products for impurities and degradation products is an essential part of the drug development and manufacturing testing process. Impurity Analysis of Raw Materials and Final Product : Waters  
 Pharmaceutical Analysis Contract Services. Specialist pharmaceutical analysis contract services to support development programs (R&D), regulatory submissions, GMP manufacturing and post-marketing requirements ... Our flexible model for providing routine raw material GMP quality control testing, gives you access to on-going QC testing resources, ...  
 The evaluation of pharmaceutical raw materials and finished products for impurities and degradation products is an essential part of the drug development and manufacturing testing process. *Quality Control of Pharmaceutical Raw Materials | UFAG ...*
