BRADSHAW SANAI

TMS 402-11/ACI 530-11/ASCE 5-11 and TMS 602/ACI 530. 1-11/ASCE 6-11 FEMA

Contains the industry consensus for design and construction of masonry structures. Written in a form easily adoptable in a general building code, this title covers topics such as: strength design of masonry, integrated seismic design provisions, cold weather masonry construction provisions for grout, and more. *Building Code Requirements and Specification for Masonry Structures and Related Commentaries* Butterworth-Heinemann
 Reported by the Masonry Standards Joint Committee.
Building Code Requirements for Masonry Structures (ACI 530-88
 Amer Society of Civil Engineers
 Papers from a June 2006 symposium report on recent work in cement, lime, mortars for unit masonry, and manufactured masonry units. Some specific topics covered include investigation and repair of glazed brick cladding, the benefits and problems of ASTM C 1324 for analyzing hardened masonry mortars, time-of-cooling effects on mortar joint color, and the selection and use of natural and manufactured stone adhered veneer. Other subjects examined include deflection criteria for masonry beams, the effect of void area on brick masonry performance, seismic evaluation of low-rise reinforced masonry buildings with flexible diaphragms, and greening of mortars. B&w photos and illustrations are included. Trimble is affiliated with the Brick Industry Association. Brisch is affiliated with Rockwell Lime Company. There is no subject index.

Based on Building Code Requirements for Masonry Structures (ACI 530-92/ASCE 5-92/TMS 402-92) and Specifications for Masonry Structures (ACI 530.1-92/ASCE 6-92/TMS 602-92) ; with Illustrated Design Applications Building Code Requirements for Masonry Structures (ACI 530-05/ASCE 5-05/TMS 402-05)Specification for Masonry Structures (ACI 530.1-05/ASCE 6-05/TMS 602-05); Commentary on Building Code Requirements for Masonry Structures (ACI 530-05/ASCE 5-05/TMS 402-05); Commentary on Specification for Masonry Structures (ACI 530.1-05/ASCE 6-05/TMS 602-05).

The 2011 edition of Building Code Requirements and Specification for Masonry Structures covers the design and construction of

masonry structures.

Covers the design and construction of masonry structures, while the Specifications is concerned with the quality, inspection, testing and placement of materials used in construction. This Code covers topics such as: definitions, analysis and design, strength, axial loads, shear, beams, and seismic design. *Building Code Requirements and Specifications for Masonry Structures* FEMA

Widely used in the construction of bridges, dams and pavements, concrete and masonry are two of the world's most utilized construction materials. However, many engineers lack a proper understanding of the methods for predicting and mitigating their movements within a structure. Concrete and Masonry Movements provides practical methods for predicting and preventing movement in concrete and masonry, saving time and money in retrofitting and repair cost. With this book in hand, engineers will discover new prediction models for masonry such as: irreversible moisture expansion of clay bricks, elasticity, creep and shrinkage. In addition, the book provides up-to-date information on the codes of practice. Provides mathematical modelling tools for predicting movement in masonry Up-to-date knowledge of codes of practice

methods Clearly explains the factors influencing all types of concrete and masonry movement Fully worked out examples and set problems are included at the end of each chapter
Materials, Testing, and Applications FEMA

The Masonry Institute of America believes that the best way to extend and improve the use of masonry is through education and dissemination of information. Following a long tradition of such ideals, the 1997 Masonry Codes and Specifications is a ready reference that furnishes, in one document, the various code requirements for masonry from the Uniform Building Code and Standards, the California State Building Code, and the American Society for Testing and Materials (ASTM) Standards that govern the specification of quality and testing of materials. The book includes Guide Specifications for masonry construction set forth in the CSI format with notes to the specifier.

American Concrete Institute

Covers the design and construction of masonry structures, the minimum construction requirements for masonry in structures, and includes definitions, contract documents, quality assurance, materials, placement of embedded items, analysis and design, strength and serviceability, flexural and axial loads, shear, details and development of reinforcement, walls, columns, pilasters, beams and lintels, seismic design requirements, glass unit masonry, veneers, and autoclaved aerated concrete masonry; and are produced through the joint efforts of The Masonry Society (TMS), the American Concrete Institute (ACI) and the Structural Engineering Institute of the American Society of Civil Engineers (SEI/ASCE)

Building Code Requirements for Masonry Structures (ACI 530-92/ASCE 5-92/TMS 402-92) ; Specifications for Masonry Structures (ACI 530.1-92/ASCE 6-92/TMS 602-92) ; Commentary on Building Code Requirements for Masonry Structures (ACI 530-92/ASCE 5-92/TMS 402-92) ; Commentary on Specifications for Masonry Structures (ACI 530.1-92/ASCE 6-92/TMS 602-92). CRC Press

Building Code Requirements and Specification for Masonry Structures contains two standards and their commentaries: Building Code Requirements for Masonry Structures designated as TMS 402-16 (and formerly designated as TMS 402/ACI 530/ASCE 5) and Specification for Masonry Structures designated as TMS 602-16 (and formerly designated as TMS 602/ACI 530.1/ASCE 6). These standards are produced by The Masonry's Society's

Committee TMS 402/602 and were formerly developed through the joint sponsorship of The Masonry Society (TMS), the American Concrete Institute (ACI), and the Structural Engineering Institute of the American Society of Civil Engineers (SEI/ASCE) through the Masonry Standards Joint Committee (MSJC). In late 2013, ACI and ASCE relinquished their rights to these standards to TMS who has served as the lead sponsor of the Standards for a number of years. Since then, the Committee has operated solely under the sponsorship of The Masonry Society, and the Committee's name, and the names of the standards, were re-designated. The Code covers the design and construction of masonry structures while the Specification is concerned with minimum construction requirements for masonry in structures. Some of the topics covered in the Code are: definitions, contract documents; quality assurance; materials; placement of embedded items; analysis and design; strength and serviceability; flexural and axial loads; shear; details and development of reinforcement; walls; columns; pilasters; beams and lintels; seismic design requirements; glass unit masonry; veneers; and autoclaved aerated concrete masonry. An empirical design method and a prescriptive method

applicable to buildings meeting specific location and construction criteria are also included. The Specification covers subjects such as quality assurance requirements for materials; the placing, bonding and anchoring of masonry; and the placement of grout and of reinforcement. This Specification is meant to be modified and referenced in the Project Manual. The Code is written as a legal document and the Specification as a master specification required by the Code. The commentaries present background details, committee considerations, and research data used to develop the Code and Specification. The Commentaries are not mandatory and are for information of the user only. *Specifications for Masonry Structures ACI 530.1-92/ASCE 6-92/TMS 602-92* American Concrete Institute
