*Dreams | International  
Association for the Study  
of Dreams* The Scientific  
Study Of  
Dreams Oneirology is the  
scientific study of dreams.  
Current research seeks

correlations between  
dreaming and current  
knowledge about the  
functions of the brain, as  
well as understanding of  
how the brain works  
during dreaming as  
pertains to memory  
formation and mental  
disorders. The study of  
oneirology can be  
distinguished from dream  
interpretation in that the

aim is to quantitatively  
study the process of  
dreams instead of  
analyzing the meaning  
behind them. Oneirology -  
Wikipedia The Scientific

 My contention, however, is that it is not dissociation, but, on the contrary, reintegration, after the

dissociation of sleep, that is the essential feature of dreams. The dream is a more or less complete reintegration of the psyche, a reintegration in a different sphere, in a psychical, nonspatial mode of existence.
