Big Picture Pedagogy: Finding Interdisciplinary Solutions to Common Learning Problems John Wiley & Sons

Death and taxes come later; what seems inevitable for children is the idea that, after spending the day at school, they must then complete more academic assignments at home. The predictable results: stress and conflict, frustration and exhaustion. Parents respond by reassuring themselves that at least the benefits outweigh the costs. But what if they don't? In The Homework Myth, nationally known educator and parenting expert Alfie Kohn systematically examines the usual defenses of homework--that it promotes higher achievement, "reinforces" learning, and teaches study skills and responsibility. None of these assumptions, he shows, actually passes the test of research, logic, or experience. So why do we continue to administer this modern cod liver oil -- or even demand a larger dose? Kohn's incisive analysis reveals how a mistrust of children, a set of misconceptions about learning, and a misguided focus on competitiveness have all left our kids with less free time and our families with more conflict. Pointing to parents who have fought back -- and schools that have proved educational excellence is possible without homework -- Kohn shows how we can rethink what happens during and after school in order to rescue our families and our children's love of learning.

“Offers savvy wisdom and actionable advice from the trenches by entrepreneurs who have lived it all. Great read and inspirational as well.”—Heidi Roizen, venture capitalist, Stanford University lecturer “This is what I want for entrepreneurs, especially for women: to believe in themselves, to dream bigger, reach higher, and to achieve success beyond their wildest expectations.”—Kay Koplovitz Been There, Run That is an anthology of blog posts by thought leaders in technology, media, e-commerce and life sciences, curated by Kay Koplovitz, founder of USA Network and chairman of Springboard Enterprises. In 2000, Koplovitz co-founded Springboard as an accelerator for an expert network of women entrepreneurs. In their first six months, Springboard companies raised over $165 million in total funding, and nearly $200 million in their first year. Now, fifteen years later, companies in the Springboard portfolio have raised over $6.5 billion and have had positive liquidity events for investors, including high-value acquisition and IPOs. Been There, Run That offers insights from dozens of Springboard alumnae and advisors on starting up, raising capital, fostering human capital, and setting company culture, an entrepreneurial tool chest. For early-stage founders and aspiring entrepreneurs, seasoned business owners, and serial entrepreneurs who want tips on crowdfunding and new technologies, readers will find value in real-life advice from those who have truly “been there, run that.” “A treasure chest of wisdom, common sense that will hopefully become more common as more come to understand it. Take your time reading this one, the good ideas are priceless and they appear on just about every single page.”—Seth Godin, New York Times bestselling author and entrepreneur

One of the goals of artificial intelligence (AI) is creating autonomous agents that must make decisions based on uncertain and incomplete information. The goal is to design rational agents that must take the best action given the information available and their goals. Decision Theory Models for Applications in Artificial Intelligence: Concepts and Solutions provides an introduction to different types of decision theory techniques, including MDPs, POMDPs, Influence Diagrams, and Reinforcement Learning, and illustrates their application in artificial intelligence. This book provides insights into the advantages and challenges of using decision theory models for developing intelligent systems.

Unlike data communications of the past, today's networks consist of numerous devices that handle the data as it passes from the sender to the receiver. However, security concerns are frequently raised in circumstances where interconnected computers use a network not controlled by any one entity or organization.

Network Access Control For Dummies John Wiley & Sons
The purpose of this handbook is to help launch institutional transformations in mathematics departments to improve student success. We report findings from the Student Engagement in Mathematics through an Institutional Network for Active Learning (SEMINAL) study. SEMINAL's purpose is to help change agents, those looking to (or currently attempting to) enact change within mathematics departments and beyond—trying to reform the instruction of their lower division mathematics courses in order to promote high achievement for all students. SEMINAL specifically studies the change mechanisms that allow postsecondary institutions to incorporate and sustain active learning in Precalculus to Calculus 2 learning environments. Out of the approximately 2.5 million students enrolled in collegiate mathematics courses each year, over 90% are enrolled in Precalculus to Calculus 2 courses. Forty-four percent of mathematics departments think active learning mathematics strategies are important for Precalculus to Calculus 2 courses, but only 15 percnt state that they are very successful at implementing them. Therefore, insights into the following research question will help with institutional transformations: What conditions, strategies, interventions and actions at the departmental and classroom levels contribute to the initiation, implementation, and institutional sustainability of active learning in the undergraduate calculus sequence (Precalculus to Calculus 2) across varied institutions?
