topics on various Asian and Pacific Islander American groups from 1848 to the present day. This three-volume work represents a leading reference resource for Asian American studies that gives students, researchers, librarians, teachers, and other interested readers the ability to easily locate accurate, up-to-date information about Asian ethnic groups,

historical and contemporary events, important policies, and notable individuals. Written by leading scholars in their fields of expertise and authorities in diverse professions, the entries devote attention to diverse Asian and Pacific Islander American groups as well as the roles of women, distinct socioeconomic classes, Asian American political and social movements,

and race relations involving Asian Americans. Remembering Sir J.C. Bose Oxford University Press on Demand This unique book contains a biographical portrait, accounts of Chandrasekhar's role and impact on modern science, historical perspectives and personal reminiscences, several of which appeared in Physics Today, and reviews by leading experts in

areas which Prof. Chandrasekhar pioneered. The reviews, which appeared in the Bulletin of the Astronomical Society of India, are either based on papers presented by scholars in the Chandrasekhar Centennial Symposium at the University of Chicago during 15-17 October 2010, or were additional reviews covering topics not represented at the conference by other

distinguished astrophysicists. It provides a glimpse of some of the most exciting areas of modern astrophysics as a tribute to Prof Chandrasekhar on his birth centenary.

Sir Jagadish Chandra Bose who, at a relatively young age, established himself among the ranks of European scientists during the heyday of colonial rule in India. He was one of those great Indian scientists who helped to introduce western science into India. A physicist, a plant electrophysiologist and one of the first few biophysicists in the world, Sir J C Bose was easily 60 years ahead

of his time and much of his research that was ignored during his lifetime is now entering the mainstream. As the inventor of millimeter waves and their generation, transmission and reception, and the first to make a solid state diode, he was the first scientist who convincingly demonstrated that plants possess a nervous system of their own and OC feelOCO pain. J C Bose

later spent his life's savings to set up the Institute which carries his name in Calcutta and Darjeeling. This book covers Bose's life in colonial India, including the general patriotic environment that pervaded at the time and how he became one of the flag bearers of the Bengal Renaissance. It also examines the scientific achievements of this polymath and his contributions

This book, which contains some thirty articles by his former students, his associates, and his colleagues, is in a sense a memorial volume. breadth of his knowledge of art, music, literature, and the humanities in general. The contributors to this highly interesting book are among the few who broke the seemingly forbidden barrier surrounding the very private Chandra and came to know him well in one context or another. pass on to another was so unique that it will draw considerable interest and attention among scholars. As Chandra elucidates in the preface, "The various installments describe in detail the evolution of my scientific work during the past forty years and records each investigation, describing the doubts and the successes, the trials and the tribulations. And the parts my various associates and

assistants played in the completion of the different investigations are detailed." It is indeed a remarkable and rare document, fascinating to read and experience the joys, frustrations and struggles of a creative mind. In addition, a compilation of selected correspondence, which includes his correspondence with his father, some family members and other well-known scientists of

the 20th century, will provide an interesting insight into the life of an extraordinary scientist. Ramesh Chandra Agarwal (English) Routledge Harish-Chandra was a mathematician of great power, vision, and remarkable ingenuity. His profound contributions to the representation theory of Lie groups, harmonic analysis, and related areas left researchers a

rich legacy that continues today. This book presents the proceedings of an AMS Special Session entitled, "Representations on Theory and Noncommutative Harmonic Analysis: A Special Session Honoring the Memory of Harish-Chandra", which marked 75 years since his birth and 15 years since his untimely death at age 60. Contributions to the volume were written by an

outstanding group of internationally known mathematicians. Included are expository and historical surveys and original research papers. The book also includes talks given at the IAS Memorial Service in 1983 by colleagues who knew Harish-Chandra well. Also reprinted are two articles entitled, "Some Recollections of Harish-Chandra", by A. Borel, and "Harish-

Chandra's contribution: A Mathematical Jewel", by S. Helgason. In addition, an expository paper, "An Elementary Introduction to Harish-Chandra's Work", gives an overview of some of his most basic mathematical ideas with references for further study. This volume offers a comprehensive retrospective of Harish-Chandra's professional life and work. Personal recollections give the book

particular significance. Readers should have an advanced-level background in the representation theory of Lie groups and harmonic analysis. For other wonderful titles written by this author see: "Euler through Time: A New Look at Old Themes", "Supersymmetry for Mathematicians: An Introduction", "The Selected Works of V.S. Varadarajan", and "Algebra in Ancient and Modern Times".

A Scientific Autobiography : S Chandrasekhar Bloomsbury Publishing USA

Even though Asian American literature is enjoying an impressive critical popularity, attention has focused primarily on longer narrative forms such as the novel. And despite the proliferation of a large number of poets of Asian descent in the 20th century, Asian American poetry remains a neglected area of study. Poetry as an elite genre has not reached the level of popularity of the novel or short story, partly due to the difficulties of reading and interpreting poetic texts. The lack of criticism on Asian American poetry speaks to the urgent need for scholarship in this area, since perhaps more than any other genre, poetry most forcefully captures the

intense feelings and emotions that Asian Americans have experienced about themselves and their world. This reference book overviews the tremendous cultural contributions of Asian American poets. Included are alphabetically arranged entries on 48 American poets of Asian descent, most of whom have been active during the latter half of the 20th

century. Each entry begins with a short biography, which sometimes includes information drawn from personal interviews. The entries then discuss the poet's major works and themes, including such concerns as family, racism, sexism, identity, language, and politics. A survey of the poet's critical reception follows. In many cases the existing criticism is scant, and the entries offer

new readings of neglected works. The entries conclude with bibliographies of primary and secondary texts, and the volume closes with a selected, general bibliography.

Life and Thought of Śaṅkarācārya

This book presents a history of English and development of language education in modern India. It explores the role of language in colonial

attempts to establish hegemony, the play of power, and the anxieties in the nineteenth- and early-twentieth-century India. The essays in the volume discuss language policy, debates and pedagogy as well as larger overarching questions such as identity, nationhood and sub-nationhood. The work also looks at the socio-cultural and economic factors that shaped the

writing and publishing of textbooks, dictionaries and determined the direction of language teaching, specifically, of English language teaching. Drawing on a variety of archival sources — policy documents, books, periodicals — this book will be of great interest to scholars and researchers of linguistics, language teaching, cultural studies and modern Indian

history.
