Half-human/half-monster Cal Leandros knows that family is a pain. But now that pain belongs to his half-brother, Niko. Niko's shady father is in town, and he needs a big favor. Even worse is the reunion being held by the devious Puck race-including the Leandros' friend, Robin- featuring a lottery that no Puck wants to win. As Cal tries to keep both Niko and Robin from paying the ultimate price for their kin, a horrific reminder from Cal's own past arrives to remind him that blood is thicker than water-and that's why it's so much more fun to spill.

This book brings together papers dealing with essential issues in applied linguistics and multilingualism that have been contributed by leading figures in these two fields and present state-of-the-art developments in theory and research. The first part includes articles touching on various aspects of multiple-language acquisition, with a particular emphasis on the role of affordances, the interfaces between language and thought, and factors influencing the process of language learning. Part Two deals with individual variations in the acquisition of additional languages, focusing in particular on the impact of such variables as age, aptitude, motivation and learning deficits. Finally, Part Three presents contributions illuminating key issues in the acquisition of different subsystems and skills, such as grammar, phonology, lexis and writing systems. Thanks to the diversity of perspectives on applied linguistics and multilingualism, as well as the cutting-edge nature of some of the proposals, this edited collection will be an important reference work and a source of inspiration for theorists and researchers.

When thinking about lowering or changing consumption to lower carbon footprints, the obvious offenders come easily to mind: petroleum and petroleum products, paper and plastic, even food, but not clothes. When people evaluate ways to lower their personal carbon footprint by changing purchasing habits, they are bombarded with information to avoid petroleum and petroleum products, plastics, paper, even food, but not clothes. Most consumers do not think of clothes as a source of environmental damage. Yet, clothes are made with petroleum products through chemically-laden industrial processes that generate significant pollution. The fashion industry is among the largest organic water polluters in the world, accounting for significant greenhouse gas emissions and generating massive amounts of waste as a function of the frequent discarding of used clothing. In the Dirty Side of the Garment Industry: Fast Fashion and Its Negative Impact on Environment and Society, author Nikolay Anguelov exposed the ecological damage from the fast-fashion business model. In this book, *The Sustainable Fashion Quest: Innovations in Business and Policy*, the author takes this one step further by focusing on solutions. This book uses the familiar (yet complex) industry of fashion as a lens to examine how business pressures and national and international policies can have both positive and negative social and ecological impacts. It provides an analysis of extant and emerging policies to address the divergence in the ongoing quest to maximize economic development and minimize the social costs of the industrialization process. It also examines emerging technologies and innovative business models that have the potential to revolutionize how fashion is perceived, manufactured, and consumed. This book begins with an introductory letter that outlines the social and environmental issues facing the fashion industry, as well as emphasizing the seriousness and urgency of addressing them. Each chapter then focuses on a major aspect of the industry with an increasing emphasis on policy. The chapters outline the impact of global-level and business-level decisions on the industry's success, its social and environmental impact, and its relationship to consumers. The goal of the book is to define that transition, explain its challenges, and educate readers on the possibilities to become powerful drivers of change through their professional

actions and their personal behavior as consumers. While the book specifically analyzes the fashion industry, it also explains the implications for other industrial sectors. It uses a product everyone is familiar with (we all buy clothes, after all) to examine the decisions, impacts, and policies shaping the industry behind the scenes. The linkages are applicable to other fast-moving consumer goods (FMCG) business sectors, such as consumer electronics, which are starting to face sustainability criticism for relying on a business model of promoting a high frequency of repeat purchasing.

Fans of the style of William Faulkner will want to read Henri Bosco, four-time nominee for the Nobel Prize in Literature. Available in English for the first time, Malicroix tells the story of a recluse living in the French countryside, unraveling how he came to a life of solitude. Henri Bosco, like his contemporary Jean Giono, is one of the regional masters of modern French literature, a writer who dwells above all on the grandeur, beauty, and ferocious unpredictability of the natural world. Malicroix, set in the early nineteenth century, is widely considered to be Bosco's greatest book. Here he invests a classic coming-of-age story with a wild, mythic glamour. A nice young man, of stolidly unimaginative, good bourgeois stock, is surprised to inherit a house on an island in the Rhône, in the famously desolate and untamed region of the Camargue. The terms of his great-uncle's will are even more surprising: the young man must take up solitary residence in the house for a full three months before he will be permitted to take possession of it. With only a taciturn shepherd and his dog for occasional company, he finds himself surrounded by the huge and turbulent river (always threatening to flood the island and surrounding countryside) and the wind, battering at his all-too-fragile house, shrieking from on high. And there is another condition of the will, a challenging task he must perform, even as others scheme to make his house their own. Only under threat can the young man come to terms with both his strange inheritance and himself.

For the Achi, one of the several Mayan ethnic groups indigenous to Guatemala, the music of the marimba serves not only as a form of entertainment but also as a form of communication, a vehicle for memory, and an articulation of cultural identity. Sergio Navarrete Pellicer examines the marimba tradition -- the historical confluence of African musical influences, Spanish colonial power, and Indian ethnic assimilation -- as a driving force in the dynamics of cultural continuity and change in Rabinal, the heart of Achi culture and society. By examining the performance and consumption of marimba music as complementary parts of a system of social interaction, religious belief, and ethnic identification, Navarrete Pellicer reveals how the strains of the marimba resonate with the spiritual yearnings and cultural negotiations of the Achi as they try to come to terms with the political violence ...

Nuclear receptors are ligand activated transcription factors that control numerous biological functions. Consequently, altering activity of these receptors is proposed, and indeed documented, to affect many physiological and pathological conditions in experimental animals and humans. Thus, nuclear receptors have become a major target in the effort to treat numerous diseases. This book will shed light on and emphasize intricate processes involved in designing as well as discovering physiological and pharmacological modulators of these important proteins. World-renowned scientists will share with the reader their professional expertise and extensive experience acquired through decades working with nuclear receptors. Chapters address the various means and consequences of modulating nuclear receptor activity will be presented and discussed. These modulators cover a wide span of moieties ranging from synthetic chemicals to natural products. In addition, the classification of these chemicals ranges from pan agonists to selective agonists and inverse agonists to antagonists. They also include proteolytic means to obliterate the receptor in the event that modulating its activity through canonical pharmacological agents becomes less effective and/or less desirable due to anticipated or experienced toxicities. Modulation of receptor activity may also take place in the absence of a ligand or through manipulating the structure of the receptor itself by controlling posttranslational events.
