Global Politics and the Power of Language Basic Books

Professional Knowledge, Professional Lives sets out to examine the state of professional knowledge with regard to teaching and teacher education. The current situation of professional knowledge is scrutinised with particular regard to the location of educational study within the faculties of education. The fate of disciplinary patterns of study, which have come under attack from the proponents of more practical perspectives, are also examined. Practical perspectives promoted by a wide spectrum of advocates have become part of the fashionable discourse around teacher education recently. These perspectives are interrogated and some of the results of such practical fundamentalism are held up for scrutiny. The author argues that confining professional knowledge entirely within the practical domain would not seem to be a well-thought out strategy for raising professional standards. A more active notion of teachers' professional knowledge can, and should, be explored and consolidated by work which focuses on the teacher's life and work, using more reflective and 'public intellectual' modes.

Cutting through the confusion around the nature and implications of digitalization, this book explores the rise of the new digital networks, how they affect traditional infrastructure, and how they will eventually need to be regulated. The authors examine how digitalization affects infrastructures in telecommunications, transport, and energy, and how digital platforms establish themselves as a new network on top of and in addition to traditional ones. Complex concepts are introduced through short and colorful stories about the founders of the most popular platforms (Google, Facebook, Skype, Uber, etc.) and how they grew to positions of power, drawing parallels with century-old traditional network industries' monopoly power (AT&T, General Electric, etc.). The authors argue that these digital platforms strongly interfere with traditional infrastructures that are heavily regulated and provide essential services for society – meaning that digital platforms should be considered as a new and much more powerful type of infrastructure and will require regulation accordingly. A global audience of policy makers, public authorities, consultants, lawyers, students, and academics, as well as anyone with an interest in these digital platforms, will find this book enlightening and essential reading.

Social Critique in Films of Lucas, Scott and Cameron New York : Simon and Schuster

On December 29, 1890, American troops opened fire with howitzers on hundreds of unarmed Lakota Sioux men, women, and children near Wounded Knee Creek in South Dakota, killing nearly 300 Sioux. As acclaimed historian Heather Cox Richardson shows in *Wounded Knee*, the massacre grew out of a set of political forces all too familiar to us today: fierce partisanship, heated political rhetoric, and an irresponsible, profit-driven media. Richardson tells a dramatically new story about the Wounded Knee massacre, revealing that its origins lay not in the

West but in the corridors of political power back East. Politicians in Washington, Democrat and Republican alike, sought to set the stage for mass murder by exploiting an age-old political tool—fear. Assiduously researched and beautifully written, *Wounded Knee* will be the definitive account of an epochal American tragedy.

This book focuses on the changes in academic careers and their implications for job attachment and the management of academic work. Against the background of an ageing profession, with different demands on academic staff, increasing insecurity, accountability and internationalisation, it discusses important, common themes in detail. This book examines such aspects as the nature of academic careers and recent changes in careers, changing biographies, rewards of academic work such as income and job satisfaction, internationalisation of the academy, and the organisation and management of academic work sites. This book is the second of two books highlighting findings from research on the academic profession, notably, the Changing Academic Profession Study and the European project supported by the European Science Foundation on changes in the academic profession in Europe (EUROAC). An adapted version of the CAP questionnaire has been used to carry out the survey in those countries that had not been involved before in the CAP survey. Altogether 19 countries are covered by the CAP project and an additional seven European countries are covered by EUROAC.

iTunes. Spotify. Pandora. With these brief words one can map the landscape of music today, but these aren't musicians, songs, or anything else actually musical—they are products and brands. In this book, Timothy D. Taylor explores just how pervasively capitalism has shaped music over the last few decades. Examining changes in the production, distribution, and consumption of music, he offers an incisive critique of the music industry's shift in focus from creativity to profits, as well as stories of those who are laboring to find and make musical meaning in the shadows of the mainstream cultural industries. Taylor explores everything from the branding of musicians to the globalization of music to the emergence of digital technologies in music production and consumption. Drawing on interviews with industry insiders, musicians, and indie label workers, he traces both the constricting forces of bottom-line economics and the revolutionary emergence of the affordable home studio, the

global internet, and the mp3 that have shaped music in different ways. A sophisticated analysis of how music is made, repurposed, advertised, sold, pirated, and consumed, *Music and Capitalism* is a must read for anyone who cares about what they are listening to, how, and why.

In this era where dollar value signals moral worth, Daniel Fridman paints a vivid portrait of Americans and Argentinians seeking to transform themselves into people worthy of millions. Following groups who practice the advice from financial success bestsellers, Fridman illustrates how the neoliberal emphasis on responsibility, individualism, and entrepreneurship binds people together with the ropes of aspiration. *Freedom from Work* delves into a world of financial self-help in which books, seminars, and board games reject "get rich quick" formulas and instead suggest to participants that there is something fundamentally wrong with who they are, and that they must struggle to correct it. Fridman analyzes three groups who exercise principles from *Rich Dad, Poor Dad* by playing the board game *Cashflow* and investing in cash-generating assets with the goal of leaving the rat race of employment. Fridman shows that the global economic transformations of the last few decades have been accompanied by popular resources that transform the people trying to survive—and even thrive.

How Students and Young Professionals Can Rise, Shine, and Impact When It Matters Most Three Rivers Press

This book argues that European Union institutional mechanics and the EU as a political unit cannot be properly understood without taking into account the elites that make the policy decisions. Spurred by globalisation, technological and economic development has provided the backbone for social and political transformations that have changed the social structures that unite and differentiate individuals and groups in Europe and their interface with extra-European actors. These developments are not only exemplified by the rise of the EU, but also by the rise of a set of transnational European power elites evolving in and around the European construction. This book maps out these EU and international interdependencies and provides a comprehensive picture of the European transnational power

elites. Moving away from the majority of literature on European integration dominated by economics, law, IR and political science, the volume is written from a sociological perspective that takes into account the individuals that make the policy decisions, the formal and informal groups in which s/he is included, as well as the social conventions that regulate political and administrative activities in the EU. This book will be of much interest to students of EU studies, sociology, critical security studies, and IR in general.

The Megachurch Book juxtaposes the way of the scripture to the way of the modern day church, particularly the megachurch. A broad range of subjects are explored including church membership, lavish buildings, dual church locations, the absence of men in the church, neglect of community, the corporate orientation of the megachurch, the tax exempt charter, and many more intriguing topics. The book primarily focuses on trends and practices that are found in African American community based megachurches. Certain topics are written in prose and biblical metaphoric style for greater impact. The more biblical versed a reader is, the more the book will resonate. In order to accommodate various levels of biblical familiarity, the author includes a Discussions and Supporting Scriptures section at the conclusion of each topic. The Megachurch Book was written to open dialogue, invoke discourse, and inspire church attendees to not only consider the appropriateness of certain megachurch practices, but to also question such practices.

The Rise of English is a masterful account of the spread of English as the dominant lingua franca worldwide, its intimate connections with globalization and neoliberalism, and its effects on linguistic justice, opportunity, and identity. Deeply researched and wide-ranging in scope, this book shows how English has privileged some and disadvantaged others, but ultimately offers the promise of transcending cultural and linguistic borders in a multilingual world.

This book explores the wide range of contexts in which research into creating connections in learning and teaching may take place. Creating connections can encompass making links, crossing divides, forming relationships, building frameworks, and generating new knowledge. The cognitive, cultural, social, emotional and/or physical aspects of understanding, meaning-

making, motivating, acting, researching, and evaluating are explored as constituent forms of creativity in relation to such connections. From this exploration the authors identify varied connective contexts and means which include the learner, the educator, the organisation, and the relevant community. The crossing of divides, forming learner-educator relationships, bringing together diverse groups of learners, establishing networks and partnerships among educators, and establishing links between organisations and communities are all considered as connections which can be created by and within the learning and teaching dynamic. By examining the factors which help to facilitate and/or restrict the possibilities for creating connections in educational contexts, implications for and outcomes of learning and/or teaching arise from the connections created. The final chapter of this book will explicate the realisations that have emerged for educators and researchers working to create connections. These offer suggestions for future directions and enunciate what and how connections might contribute to both educational institutions and the broader society.
