Memories of Southampton Cambridge University Press
 Human activities have taken place in the world's oceans and seas for most of human history. With such a vast number of ways in which the oceans can be used for trade, exploited for natural resources and fishing, as well as concerns over maritime security, the legal systems regulating the rights and responsibilities of nations in their use of the world's oceans have long been a crucial part of international law. The United Nations Convention on the Law of the Sea comprehensively defined the parameters of the law of the sea in 1982, and since the Convention was concluded it has seen

considerable development. This Oxford Handbook provides a comprehensive and original analysis of its current debates and controversies, both theoretical and practical. Written by over forty expert and interdisciplinary contributors, the Handbook sets out how the law of the sea has developed, and the challenges it is currently facing. The Handbook consists of forty chapters divided into six parts. First, it explains the origins and evolution of the law of the sea, with a particular focus upon the role of key publicists such as Hugo Grotius and John Selden, the gradual development of state practice, and the creation of the 1982 UN Convention. It then reviews the components which comprise the maritime domain, assessing their definition, assertion, and recognition. It also analyses the ways in which coastal states or the international community can assert control over areas of the sea, and

the management and regulation of each of the maritime zones. This includes investigating the development of the mechanisms for maritime boundary delimitation, and the decisions of the International Tribunal for the Law of the Sea. The Handbook also discusses the actors and intuitions that impact on the law of the sea, considering their particular rights and interests, in particular those of state actors and the principle law of the sea institutions. Then it focuses on operational issues, investigating longstanding matters of resource management and the integrated oceans framework. This includes a discussion and assessment of the broad and increasingly influential integrated oceans management governance framework that interacts with the traditional law of the sea. It considers six distinctive regions that have been pivotal to the development of the law of

the sea, before finally providing a detailed analysis of the critical contemporary issues facing the law of the sea. These include threatened species, climate change, bioprospecting, and piracy. The Handbook will be an invaluable and thought-provoking resource for scholars, students, and practitioners of the law of the sea.

Reveals the reasons for the problems with love and relationships, and explains what we can do to alleviate problems and pain. This book shows us that it is easy to love - if you know how. It includes real case stories, and descriptions and instructions. It is intended for those who want to improve their experience with loving, and being loved.

Dokdo Cambridge University Press

Utilizing perspectives from international law, international relations, and history, this volume provides a balanced perspective on territorial disputes in Northeast Asia highlighting the issue of Dokdo which is disputed between Korea and Japan.

Penetrating Bars through Masks of Cosmic Dust Routledge

In a poverty-stricken neighbourhood wedged between the city and the sea, a father and son struggle to keep their heads above water. Rather than being discouraged by their difficulties and hardship, their response is to come up with increasingly bizarre and imaginative plans in order to get by. Even when a horrifying, macabre event rocks the neighborhood and the locals start to flee, father and son decide to stay put. What matters is staying together. This is a bold, poignant text that juxtaposes a very tender father-son relationship with the son's sexual liberation and a brutal depiction of homophobic violence. Giuseppe Caputo uses delicate - yet electrifying - lyricism and imagery to weave a tale that balances desire, violence, discrimination, love, eroticism and defiance, while evoking with surreal humor the social marginalization of the protagonists as they struggle to keep afloat in a society where there are no safety nets. Like a brightly-lit theme park with its house of horrors, reminiscent in parts of James Baldwin's *Another Country* or Virginia Despentes' *Vernon Subutex* trilogy, *An Orphan World* defies the reader to look away, and the reward is an exhilarating carnival ride filled with beauty, compassion and loss.

This extensively illustrated book presents

the astrophysics of galaxies since their beginnings in the early Universe. It has been thoroughly revised to take into account the most recent observational data, and recent discoveries such as dark energy. There are new sections on galaxy clusters, gamma ray bursts and supermassive black holes. The authors explore the basic properties of stars and the Milky Way before working out towards nearby galaxies and the distant Universe. They discuss the structures of galaxies and how galaxies have developed, and relate this to the evolution of the Universe. The book also examines ways of observing galaxies across the whole electromagnetic spectrum, and explores dark matter and its gravitational pull on matter and light. This book is self-contained and includes several homework problems with hints. It is ideal for advanced undergraduate students in astronomy and astrophysics.

LIZ K. BLOCK 1. Harvard College

Observatory, 1958 The past century has

truly brought about an explosive period of

growth and discovery for the physical

sciences as a whole, and for astronomy in

particular. Galaxy morphology has

reached a renaissance . . . The year: 1958.

The date: October 1. The venue: Harvard

College Observatory. The lecturer: Walter

Baade. With amazing foresight, Baade

penned these words: "Young stars,

supergiants and so on, make a terrific

splash - lots of light. The total mass of

these can be very small compared to the

total mass of the system". Dr Layzer then

asked the key question: ". . . the

discussion raises the point of what this

classification would look like if you were to

ignore completely all the Population I, and

just focus attention on the Population II . . .

" We stand on the shoulders of giants. The

great observer E. E. Barnard, in his

pioneering efforts to photograph the Milky

Way, devoted the major part of his life to

identifying and numbering dusty "holes"

and dust lanes in our Milky Way. No one

could have dreamt that the pervasiveness

of these cosmic dust masks (not only in

our Galaxy but also in galaxies at high

redshift) is so great, that their

"penetration" is truly one of the pioneering

challenges from both space-borne

telescopes and from the ground.

Expand your animation toolkit and remain competitive in the industry with this leading resource for 2D and 3D character animation techniques. Apply the industry's best practices to your own workflows and develop 2D, 3D and hybrid characters with ease. With side by side comparisons of 2D and 3D character design, improve your character animation and master traditional principles and processes including weight and balance, timing and walks. Develop characters inspired by humans, birds, fish, snakes and four legged animals. Breathe life into your character and develop a character's personality with chapters on acting, voice-synching and facial expressions. Expertly integrate core animation techniques with your software of choice featuring step-by-step tutorials, highlighting 3ds Max, Maya and Blender workflows. Adapt the tips, tricks and techniques for unique projects like character design for rotoscoping and motion capture. Advance beyond the fundamentals of 2D and 3D character animation with the companion website which includes short demonstration movies, 2D and 3D exercises and fully rigged character models.

The untold story of India's Partition. The partition of India in 1947 was the only way to contain intractable religious differences as the subcontinent moved towards independence - or so the story goes. But this dramatic new history reveals previously overlooked links between British strategic interests - in the oil wells of the Middle East and maintaining access to its Indian Ocean territories - and partition. Narendra Singh Sarela reveals here how the Great Game against the Soviet Union cast a long shadow. The top-secret documentary evidence unearthed by the author sheds new light on several prominent figures, including Gandhi, Jinnah, Mountbatten, Churchill, Attlee, Wavell and Nehru. This radical reassessment of one of the key events in British colonial history is important in itself, but its claim that many of the roots of Islamic terrorism sweeping the world today lie in the partition of India has much wider implications.

Watch the Digital trailer of the book To unravel the Kashmir knot one must wade through a deep valley of questions armed with fresh material on the historical and political context of this perennial debate, together with novel legal analysis of the Kashmir issue. Do the rules that created Pakistan make J&K a part of India? Is not the routing of the China-Pakistan Economic Corridor through the territory of J&K illegal? How did J&K become a 'disputed territory' in the first place? The book explores these, and many more issues, to piece together a realistic solution to the Kashmir conundrum.

An Orphan World Del Rey

A collection of short stories born of the Chicago experience with a bit of Caribbean flavor sprinkled in. Young love, revenge, the pain of loss, secret places, forgetting, sexual exploration, bicycles, hatred, survival, books, zombies, a cryogenic lab conspiracy and cover-up--this book explores these important, indispensable things and some other piddly little ones as well.

Launched in 1991, The Asian Yearbook of International Law is a major refereed publication dedicated to international law issues as seen primarily from an Asian perspective, under the auspices of the Foundation for the Development of International Law in Asia (DILA). It is the first publication of its kind edited by a team of leading international law scholars from across Asia. The Yearbook provides a forum for the publication of articles in the field of international law, and other Asian international law topics, written by experts from the region and elsewhere. Its aim is twofold: to promote international law in Asia, and to provide an intellectual platform for the discussion and dissemination of Asian views and practices on contemporary international legal issues. Each volume of the Yearbook contains articles and shorter notes; a section on State practice; an overview of Asian states participation in multilateral treaties; succinct analysis of recent international legal developments in Asia; an agora section devoted to critical perspectives on international law issues; surveys of the activities of international organizations of special relevance to Asia; and book review, bibliography and documents sections. This volume offers Asian perspectives on topics including : treaty-making power in China; the crime of aggression, illegal fishing and the destruction of environment in armed

conflicts.

At the intersection of two sweeping global trends—the rise of popular support for principles of theocratic governance and the spread of constitutionalism and judicial review—a new legal order has emerged: constitutional theocracy. It enshrines religion and its interlocutors as “a” or “the” source of legislation, and at the same time adheres to core ideals and practices of modern constitutionalism. A unique hybrid of apparently conflicting worldviews, values, and interests, constitutional theocracies thus offer an ideal setting—a “living laboratory” as it were—for studying constitutional law as a form of politics by other means. In this book, Ran Hirschl undertakes a rigorous comparative analysis of religion-and-state jurisprudence from dozens of countries worldwide to explore the evolving role of constitutional law and courts in a non-secularist world. Counterintuitively, Hirschl argues that the constitutional enshrinement of religion is a rational, prudent strategy that allows opponents of theocratic governance to talk the religious talk without walking most of what they regard as theocracy’s unappealing, costly walk. Many of the jurisdictional, enforcement, and cooptation advantages that gave religious legal regimes an edge in the pre-modern era, are now aiding the modern state and its laws in its effort to contain religion. The “constitutional” in a constitutional theocracy thus fulfills the same restricting function it carries out in a constitutional democracy: it brings theocratic governance under check and assigns to constitutional law and courts the task of a bulwark against the threat of radical religion.

Carbon Nanomaterials for Agri-food and Environmental Applications discusses the characterization, processing and applications of carbon-based nanostructured materials in the agricultural and environmental sectors. Sections discuss the synthesis and characterization of carbon nanotubes, the technological developments in environmental applications of carbon-based nanomaterials, and agri-food applications. The book also covers the toxic effects of engineered carbon nanoparticles on the environment, and in plants and animals. Finally, quality control and risk management are addressed to assess health and environmental risks. This is an applicable book for graduate students, researchers and those in industrial sectors of science and technology who want to learn more about carbon nanomaterials. Compares a range of carbon-based nanomaterials, showing how they are used for a range of agricultural and environmental applications Discusses the challenges and toxicity of different types of carbon-based nanomaterials for environmental and agricultural applications Explores when different classes of nanomaterial should be used in different environments

 "African & American tells the story of the much overlooked experience of first and second generation West African immigrants and refugees in the United States during the last forty years. Interrogating the complex role of post-colonialism in the recent history of black America, Marilyn Halter and Violet Showers Johnson highlight the intricate patterns of emigrant work and family

adaptation, the evolving global ties with Africa and Europe, and the translocal connections among the West African enclaves in the United States. Drawing on a rich variety of sources, including original interviews, personal narratives, cultural and historical analysis, and documentary and demographic evidence, African & American explores issues of cultural identity formation and socioeconomic incorporation among this new West African

diaspora. Bringing the experiences of those of recent African ancestry from the periphery to the center of current debates in the fields of immigration, ethnic, and African American studies, Halter and Johnson examine the impact this community has had on the changing meaning of 'African Americanness' and address the provocative question of whether West African immigrants are, indeed, becoming the newest African Americans"--Provided by publisher.
